

Investment objective

The Adviceworx Worldwide Equity aims to deliver long-term capital growth by investing in the best opportunities in developed and emerging markets.

Investment strategy and universe

Adviceworx Worldwide Equity combines high conviction offshore stock picks, selected for their attractive quality and growth characteristics, and identified as leaders within the respective fields, with broad, low cost index exposure and more specialised approaches. These include systematic investing, thematic opportunities focused on long-term global trends, and traditional active managers. The result is a diversified global equity portfolio designed to capture opportunities across different markets and investment styles.

Fund characteristics and risks

The fund invests in shares of companies listed on equity markets around the world, collective investment schemes, exchange traded funds, financial instruments and assets in liquid form. Therefore, the fund is exposed to investment risk, market risk, default risk and currency risk.

International market commentary

Global equity markets were largely unchanged in July, although performance beneath the surface told a more nuanced story. Investor enthusiasm around artificial intelligence and related capital expenditure themes came under greater scrutiny during the month, prompting a rotation away from some of the market's strongest performers. The MSCI All Country World Index delivered a return of 0.1% in July, taking its year-to-date gain to 11.3%, while the 12-month return reached an impressive 22% in US dollar terms despite a backdrop of elevated geopolitical uncertainty and ongoing macroeconomic challenges.

One of the more notable developments during the month was the continued shift in market leadership from growth to value shares. As technology stocks retreated, the growth segment of the MSCI All Country World Index declined by 3.2%, while the value segment advanced by 2.9%. This trend has been evident throughout the year, with value stocks returning 15.5% year to date compared with 8.1% for growth stocks.

Regional market performance was mixed. The US S&P 500 Index was marginally negative in July but remains firmly positive, delivering returns of 9.4% year to date and 18% over the past 12 months.

Broadcom	1.68
Micron Technology	0.39
JPMorgan Chase	0.27

In Japan, the Nikkei 225 Index experienced a sharp pullback of 8% following exceptionally strong gains earlier in the year. Even so, Japanese equities have still returned 29% year to date and an impressive 59.4% over the past year in local currency terms.

Currency markets also saw significant moves. The Japanese yen strengthened by 3.2% against the US dollar following coordinated intervention efforts aimed at halting its prolonged depreciation, after briefly touching its weakest levels in four decades. The euro also gained ground, appreciating 0.9% against the dollar to end the month at \$1.15. Supported by improving economic sentiment and easing inflation pressures, the Euro Stoxx 600 Index advanced 1.3% during July and delivered a strong 12-month return of 22.6% in euro terms.

Emerging market equities faced a more challenging environment. Although markets such as Brazil, India and China delivered positive returns, these gains were outweighed by weakness in South Korea, where semiconductor-related shares retraced following a powerful rally earlier in the year. As a result, the MSCI Emerging Markets Index declined by 3% in July. Nevertheless, the asset class continues to outperform developed markets over the longer term, having returned 36.4% in US dollars over the past 12 months

Glossary

Annualised Performance: Annualised performance shows longer term performance rescaled to a 1 year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request.

Highest & Lowest performance: The highest and lowest performance for any 1 year over the period since inception have been shown.

NAV: The net asset value represents the assets of a fund less its liabilities.

Total Expense Ratio (TER%): The Total Expense Ratio (TER) is the percentage of the net asset value of the class of the Financial Product incurred as expenses relating to the administration of the Financial Product.

Transaction Costs (TC%): The Transaction Costs (TC) is the percentage of the net asset value of the Financial Product incurred as costs relating to the buying and selling of the assets underlying the Financial Product.

Total Investment Charges TIC (%) = TER (%) + TC (%): The Total Investment Charges (TIC), the TER + the TC, is the percentage of the net asset value of the class of the Financial Product incurred as costs relating to the investment of the Financial Product. It should be noted that a TIC is the sum of two calculated ratios (TER+TC)

Bid Price: The price a buyer is willing to pay for a security.

Offer Price (Ask Price): The price a seller is willing to accept for a security.

Bid/Offer Spread: The difference between the offer and bid prices, indicating market liquidity.

Disclaimer

Collective Investment Schemes in Securities (CIS) should be considered as medium to long-term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate. CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's. During the phase in period TER's do not include information gathered over a full year. Transaction Costs (TC) is the percentage of the value of the fund incurred as costs relating to the buying and selling of the fund's underlying assets. Transaction costs are a necessary cost in administering the fund and impacts fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of fund, investment decisions of the investment manager and the TER. Exchange traded funds are listed on an exchange and may incur additional costs.

The Manager retains full legal responsibility for any third party-named portfolio. Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macroeconomic risks, political risks, foreign exchange risks, tax risks, settlement risks, and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. Performance has been calculated using net NAV to NAV numbers with income reinvested.

Exchange Traded funds vs Unit Trusts: Whilst both unit trusts and ETFs are regulated and registered under the Collective Investment Schemes Control Act, ETFs trade on stock exchanges just like any other listed, tradable security. Unlike a unit trust, which can be bought or sold only at the end of the trading day, an ETF can be traded intraday, during exchange trading hours. For any additional information such as fund prices, brochures and application forms please go to HYPERLINK "<http://www.prescient.co.za>"www.prescient.co.za. This portfolio operates as a white label fund under the Prescient ETF Scheme, which is governed by the Collective Investment Schemes Control Act.
