INDEPENDENT ALTERNATIVES MONEY MARKET PRESCIENT FUND

Minimum Disclosure Document & General Investor Report : 30 September 2026

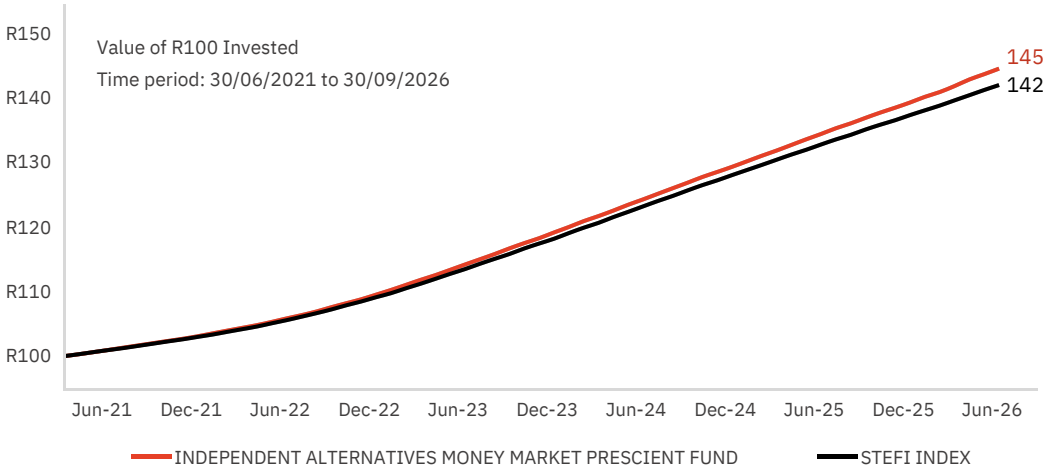

FUND INVESTMENT OBJECTIVE & SUMMARY

The Independent Alternatives Money Market Prescient Fund "The Fund" is a quantitatively biased, macro–thematic money market fund. We believe that the performance of money market instruments is greatly influenced by the macroeconomic environment and central bank policy, and therefore we aim to position in those instruments, which we believe will outperform in the current macroeconomic environment. The Fund is a low risk, domestic only, money market portfolio which aims to outperform the Short–Term Fixed Interest (STeFI) Index before fees over three–year rolling periods.

INVESTMENT POLICY

The Independent Alternatives Money Market Prescient Fund will aim to maximise the interest income, to provide liquidity, as well as the preservation of capital through investing in domestic cash and near cash instruments. The Fund will invest in selected money market instruments issued by government, parastatals, corporates, and banks with a maturity term of less than 13 months. The Fund is Regulation 28 Compliant. Independent Alternatives has adhered to the policy objective in managing the Fund.

COMMENTARY

Fund Overview

Launched in 2020, the IA Money Market Fund offers institutional and retail investors conservative, liquid exposure to short-term interest rates through diversified, high-quality instruments with maturities of up to 13 months. It limits corporate credit concentration and aims to outperform the STeFI Index within Regulation 28.

Performance Review

Despite a volatile third quarter, the Fund outperformed STeFI across all reported periods: 0.60% versus 0.56% in September, 1.91% versus 1.72% over three months, and 7.39% versus 6.97% over 12 months. This reflected disciplined risk management, issuer selection and duration positioning, with increased high-quality floating-rate exposure and retained 6- to 12-month T-bills supporting yield and liquidity.

Market Dynamics

Geopolitical conflict disrupted energy and fertiliser supplies, lifted oil above $100/bbl and intensified global inflation and rate pressures. The US 10-year yield reached 5.30% after renewed Fed tightening, while the ECB and Bank of Japan also raised rates. Locally, the SARB lifted the repo rate to 7.25%, raised its 2026 inflation forecast above 5% and lowered its growth forecast to 1.2% after a 0.2% Q2 contraction.

Although August CPI and core CPI were slightly below expectations at 4.4% and 4.1%, markets still priced three additional 25bps hikes by end-2027. FRAs reached 8% and 12-month T-bills averaged 8.10%; short-dated floating-rate corporate spreads tightened, while longer-dated corporate issuance cleared wider.

Government bond demand remained constructive, reflecting confidence in domestic fundamentals despite global volatility and rising US yields.

Our Views and Positioning

We expect four rate hikes by 2027 and see inflation rising above 6% before returning to target, with a risk of faster SARB tightening. The fund therefore remains cautious and liquid, reducing corporate credit as spreads tighten, increasing floating-rate exposure and retaining selected 6- to 12-month T-bills.

Geopolitical developments and US yields should keep markets volatile, although favourable terms of trade and domestic reforms support a measured stance. The Fund enters Q4 2026 with high liquidity and balanced floating-rate exposure, prioritising capital preservation and daily liquidity while targeting above-benchmark returns.

INDEPENDENT ALTERNATIVES

GENERAL INFORMATION

Collective Investment Schemes (CIS) should be considered as medium to long-term investments. The value of your investment may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors for it to be managed more efficiently in accordance with its mandate. CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. Excessive withdrawals from the portfolio may place the portfolio under liquidity pressures and a process of ring-fencing of withdrawal instructions and managed pay-outs over time may be followed. The Manager retains full legal responsibility for any portfolio hosted on its CIS platform. Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macroeconomic risks, political risks, foreign exchange risks, tax risks, settlement risks; and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees.

Total Expense Ratio (TER):
The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's. During the phase in period TER's do not include information gathered over a full year.

Transaction Cost (TC):
Transaction Costs (TC) is the percentage of the value of the Fund incurred costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER. The TER and the Transaction costs should not be deducted again from published returns.

Total Investment Charge:
The sum of the TER and transaction costs is shown as the Total Investment Charge. Since Fund returns are quoted after the deduction of these expenses, the TER and Transaction costs should not be deducted again from published returns.

Total Investment Charge annualised:

Annual Management Fee (incl. VAT)	0.30%
Other Costs (incl. VAT)	0.10%
Performance Fee (incl. VAT)	0.00%
Total Expense Ratio (incl. VAT)	0.52%
Transaction Costs (incl. VAT)	0.00%
Total Investment Charge (incl. VAT)	0.52%

This portfolio operates as a white label fund under the Prescient Unit Trust Scheme, which is governed by the Collective Investment Schemes Control Act.

Investing:
Investment subscriptions are processed daily. Your application form together with proof of payment must be submitted to Prescient Fund Services before 13h00. IMPORTANT DEFINITIONS

Annualised Performance:
Annualised performance show longer term performance rescaled to a 1-year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request.

Highest & Lowest Return:
The highest and lowest returns for any 1 year over the period since inception have been shown.

NAV:
The net asset value represents the assets of a Fund less its liabilities.

High Water Mark:
The highest level of performance achieved over a specified period.

Correlation:
A statistical measure of how two securities move in relation to each other. Correlation is computed into what is known as the correlation coefficient, which ranges between -1 and +1. Perfect positive correlation (a correlation coefficient of +1) implies that as one security moves, either up or down, the other security will move in lockstep, in the same direction. If the correlation is 0, the movements of the securities are said to have no correlation.

Maximum Drawdown:
The maximum peak to trough loss suffered by the Fund since inception.

Standard Deviation:
Measures the variation of returns around the portfolio's average return.

DISCLAIMER FOR FUND SPECIFIC RISKS

Performance has been calculated using net NAV to NAV numbers with income reinvested. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request. The Independent Alternatives Money Market Prescient Fund is not a bank deposit account. The Fund aims to maintain a constant price of 100 cents per unit. The total return an investor receives is made up of interest received and any gain or loss made on instruments held by the Fund. While capital losses are unlikely, they can occur if, for example, one of the issuers of an instrument defaults. In this event investors may lose some of their capital. To maintain a constant price of 100 cents per unit, investors' unit holdings will be reduced to the extent of such losses. The yield is calculated according to ASISA standards. Excessive withdrawals from the Fund may place it under liquidity pressure; if this happens withdrawals may be ringfenced and managed over a period of time. Purchase and redemption requests must be received by Prescient by 13:00 each business day to receive that day's price. Prices are published daily and are available on the Prescient website. The investment performance is for illustrative purposes only. Investment performance is calculated by taking the actual initial fees and all ongoing fees into account for the amount shown. Income is reinvested on the reinvestment date.
