

Investment Objective

The Fairtree Global Emerging Markets Prescient Feeder Fund is an actively managed global equity fund. The objective of the fund is to offer long term capital growth by investing in emerging equity markets or in companies that derive a significant portion of their revenue in emerging economies. The portfolio is constructed in a diversified manner and aims to provide returns above the index.

Investment Policy

The objective of the Fairtree Global Emerging Markets Prescient Feeder Fund is to provide investors with long term capital growth by investing primarily in large and mid-cap stocks within emerging equity markets, or in companies that derive a significant portion of their revenue, profits or asset base from emerging economies. Our investment philosophy is to buy quality companies, that are growing earnings, at attractive valuations below intrinsic value. In order to achieve this objective, the portfolio uses a quantitative screening process, based on various factors, to identify the most attractive opportunities. Fundamental research is then performed to determine the inclusion and sizing of positions.

MARKET COMMENTARY

The fund returned 0.13% in ZAR, underperforming the benchmark by 3%. The MSCI Emerging Markets Index rose 3.13% in ZAR and 9.69% in USD over the month. Within emerging markets, South Korea and Taiwan were the standout performers, advancing 28% and 16.5% respectively. Indonesia and Brazil were the main detractors, declining 14.8% and 9.1% (all figures in USD).

Global equity markets continued to recover in May, building on April's rebound as geopolitical risks eased and investor appetite for risk assets improved. US equities were particularly strong, with the S&P 500 up 5.3% and the Nasdaq 100 advancing 10.6%, supported by strength in technology and semiconductor stocks. The rally was driven by optimism around AI-related capital expenditure and earnings growth, with semiconductor-linked markets also performing strongly, particularly in Asia. Improved geopolitical sentiment also supported markets, as progress in US-Iran ceasefire negotiations helped reduce the risk premium that had built up in oil markets during March and April. Brent crude fell sharply as investors priced in a lower probability of broader regional escalation, although the improvement remains fragile, with security risks in the region continuing late in the month. Central bank policy also remained in focus. The macro backdrop remained mixed, with April payrolls rising by 115k and unemployment holding at 4.3%, while first quarter GDP growth was revised lower to 1.6%, pointing to an economy that remains resilient but is showing signs of moderating momentum.

Emerging markets continued to deliver strong gains in May, with the MSCI Emerging Markets Index rising 9.7%, supported by the continued AI and semiconductor rally. Performance once again diverged meaningfully on a country level. South Korea and Taiwan were the standout performers, advancing 28% and 16.5% respectively, driven by strong demand for memory, foundry and semiconductor-related stocks as investor appetite for AI infrastructure exposure remained elevated. In South Korea, Samsung Electronics and SK Hynix continued to benefit from tight high bandwidth memory supply and strong AI-related demand, while Taiwan was supported by further gains in TSMC as demand for advanced chips and foundry capacity remained robust. By contrast, Indonesia fell 14.8% amid continued concerns around market accessibility, potential index-related outflows and foreign investor sentiment. Brazil also declined 9.1% as inflation concerns and restrictive monetary policy weighed on sentiment. Overall, May highlighted the extent to which AI and semiconductor exposure drove market leadership, while country specific macro and market structure concerns weighed on selected markets.

On a sector level, Information Technology was the best-performing sector and main contributor over the month, where the fund's substantial underweight detracted from relative performance. The fund's underweight to Energy and Utilities added to relative performance. The fund's overweight holdings in Consumer Discretionary and Financials detracted from relative performance.

On a country level, the portfolio's underweight to South Korea was the largest detractor from relative performance. Samsung and SK Hynix together account for approximately 70% of the MSCI Korea Index and over 15% of the MSCI EM Index. TSMC represents around 55% of the MSCI Taiwan Index and over 14% of the MSCI EM Index. The portfolio maintains a maximum regulatory position limit of 10% per stock, resulting in an unavoidable underweight. The continued strong performance in emerging markets was predominantly driven by these three names, namely Samsung, SK Hynix and TSMC, underscoring how concentrated the rally was in just a few stocks.

Notable portfolio actions during May included adding selectively in South Korea, where the fund added to SK Hynix, which continued to benefit from strong demand for high bandwidth memory, and initiated new positions in Kia Corp and Hyundai, broadening exposure to the Korean market. The fund also added to JD.com and initiated a new position in Gold Fields. The fund trimmed Kaspi and fully exited Bid Corp, Hindalco, Afya, Kingboard, Piraeus, Santam and BHP, reducing positions where the risk-reward or portfolio fit had become less compelling.

Notable contributors to fund performance were positions in SK Hynix (+382bps absolute and -249bps relative), Samsung (+173bps absolute and -95bps relative) and TSMC (+90bps absolute and -74bps relative). Notable detractors from performance over the month came from Futu Holdings (-27bps absolute and relative), Tencent (-23bps absolute and 2bps relative) and Sasol (-20bps absolute and -19bps relative).

The fund remains overweight South Africa and Kazakhstan, where we continue to identify compelling bottom-up opportunities. Conversely, the fund remains underweight India, China and South Korea, with India continuing to trade at elevated valuations relative to broader emerging market peers.

Glossary

Annualised Performance: Annualised performance shows longer term performance rescaled to a 1 year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request.

Highest & Lowest Performance: The highest and lowest performance for any 1 year over the period since inception have been shown.

NAV: The net asset value represents the assets of a Fund less its liabilities.

Current Yield: Annual income (interest or dividends) divided by the current price of the security.

Alpha: Denotes the outperformance of the fund over the benchmark.

Sharpe Ratio: The Sharpe ratio is used to indicate the excess return the portfolio delivers over the risk free rate per unit of risk adopted by the fund.

Sortino Ratio: A measure of the risk-adjusted return of a portfolio. It is a modification of the Sharpe ratio but only penalises the returns falling below a user specified target, or required rate of return, while the Sharpe ratio penalises both upside and downside volatility equally.

Standard Deviation: The deviation of the return stream relative to its own average.

Max Drawdown: The maximum peak to trough loss suffered by the Fund since inception.

Max Gain: Largest increase in any single month.

% Positive Month: The percentage of months since inception where the Fund has delivered positive return.

Specific Risk

Default Risk: The risk that the issuers of fixed income instruments may not be able to meet interest payments nor repay the money they have borrowed. The issuers credit quality is vital. The worse the credit quality, the greater the risk of default and therefore investment loss.

Derivatives Risk: The use of derivatives could increase overall risk by magnifying the effect of both gains and losses in a Fund. As such, large changes in value and potentially large financial losses could result.

Developing Market (excluding SA) Risk: Some of the countries invested in may have less developed legal, political, economic and/or other systems. These markets carry a higher risk of financial loss than those in countries generally regarded as being more developed.

Foreign Investment Risk: Foreign securities investments may be subject to risks pertaining to overseas jurisdictions and markets, including (but not limited to) local liquidity, macroeconomic, political, tax, settlement risks and currency fluctuations.

Interest Rate Risk: The value of fixed income investments (e.g. bonds) tends to be inversely related to interest and inflation rates. Hence their value decreases when interest rates and/or inflation rises.

% Property Risk: Investments in real estate securities can carry the same risks as investing directly in real estate itself. Real estate prices move in response to a variety of factors, including local, regional and national economic and political conditions, interest rates and tax considerations.

Currency Exchange Risk: Changes in the relative values of individual currencies may adversely affect the value of investments and any related income.

Geographic / Sector Risk: For investments primarily concentrated in specific countries, geographical regions and/or industry sectors, their resulting value may decrease whilst portfolios more broadly invested might grow.

Derivative Counterparty Risk: A counterparty to a derivative transaction may experience a breakdown in meeting its obligations thereby leading to financial loss.

Liquidity Risk: If there are insufficient buyers or sellers of particular investments, the result may lead to delays in trading and being able to make settlements, and/or large fluctuations in value. This may lead to larger financial losses than expected.

Equity Investment Risk: Value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects as well as more general market factors. In the event of a company default (e.g. bankruptcy), the owners of their equity rank last in terms of any financial payment from that company.

Disclosure

The portfolio has adhered to its object and there were no material changes to the composition of the portfolio during the quarter.

Risk Indicator Definition

The Fund will mainly invest in large and mid cap stocks within emerging equity markets, or in companies that derive a significant portion of their revenue, profits or asset base from emerging economies.

Disclaimer

Collective Investment Schemes in Securities (CIS) should be considered as medium to long term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate.

CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's. During the phase in period TER's do not include information gathered over a full year. Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

The Manager retains full legal responsibility for any third party named portfolio. Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macro economic risks, political risks, foreign exchange risks, tax risks, settlement risks; and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient by or before 13:00 (SA), to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut off time Prescient shall not be obliged to transact at the net asset value price as agreed to. Funds are priced at either 3pm or 5pm depending on the nature of the Fund. Prices are published daily and are available on the Prescient website.

This portfolio operates as a white label fund under the Prescient Unit Trust Scheme, which is governed by the Collective Investment Schemes Control Act.

Performance has been calculated using net NAV to NAV numbers with income reinvested. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request.
