

# Morningstar Global Growth Fund

As of 2025/06/30

## Investment Objective & Strategy

The investment objective of the Fund is to deliver capital growth over the long-term.

The Fund will invest in a variety of underlying funds (including ETFs) to achieve its investment objective. The Fund is expected to be fully invested (100%) in equities. This allocation, however, may deviate and change according to prevailing market conditions.

## Risk Profile

This fund is suitable for investors with a high risk tolerance, and an investable time horizon between 7 and 10 years. There is a reasonable probability of capital loss over time periods shorter than 7 years.

## Investment Performance

Performance figures will be included once the Morningstar Global Growth Fund has a 12-month track record as per regulatory requirements.

## Asset Allocation

## Equity Regional Exposure

## Equity Sector Exposure

## Fund Information

## Quarterly Fund Commentary

The second quarter of 2025 reaffirmed the importance of diversification as a key defence against uncertainty. US equities had a meaningful rebound during the quarter, international developed and emerging markets remain ahead on a year-to-date basis, underscoring the benefits of maintaining broad, global exposure across asset classes.

The quarter got off to one of the worst starts on record. April 3 and 4 saw US stocks—measured by the Morningstar US Market Index—fall nearly 11%, marking the third-worst two-day return since 2002. The spark was obvious: newly announced tariffs, which ignited fears of a global trade slowdown and sent markets into a dive. Moving beyond tariffs and the market reaction, the “Magnificent Seven” have received significant attention in recent years—and rightfully so. They’ve been responsible for a large portion of US equity returns. However, the paths of those companies appear to be diverging. Through June, four of those seven companies are underperforming the Morningstar US Market Index so far in 2025. Tesla and Apple are either in or near bear-market territory, down (-21.3%) and (-17.9%), respectively. Point being, market leadership has been widening. Industrials, Utilities, and Financials are among the top-performing US sectors this year—a clear shift from the tech-giant leadership of recent years. That trend also extends globally. International stocks (MSCI EAFE) are outperforming US stocks (Morningstar US Market Index) by more than 13% through June 30, one of the widest midyear gaps in decades. Emerging Markets (MSCI EM), up more than 15% year to date, are also well ahead of US stocks. While six months of outperformance doesn’t signal regime change, it’s worth paying attention to. The combination of lower valuations, improving earnings, and tailwinds like a weaker dollar and rising fiscal spending in Europe—compared to belt-tightening in the US—could provide continued support for international equities, which many investors may be overlooking.

Sentiment continues to play an overly prominent role in the current environment with US Tech being the main beneficiary despite valuations remaining stretched. Markets have priced in a surge of capital spending tied to AI, with the expectation that it will translate into strong future profits and productivity gains. However, if those expectations aren’t met, investor confidence could be shaken. And given today’s elevated market valuations—which are often viewed as a “confidence score”—even a small change in sentiment could have a meaningful impact on US stocks. While we’re not making a specific forecast, preparing for a range of outcomes is essential. Diversification remains one of the most effective ways to do that. It helps smooth volatility, absorb shocks, and keep portfolios on track with long-term goals. Successful investing often starts with clear goals, a disciplined process, and the patience to stick with it. Diversification, planning, and active rebalancing all support that effort. However, in the end, an investor’s own behaviour—especially during turbulent times—may be what matters most. That’s worth remembering as we navigate the path ahead.

The fund is deliberately diversified across a range of geographical regions in a way that we believe can deliver robust long-term outcome potential for the risk level targeted by the relevant equity level. The fund’s key positions at the current time include: 1) an overweight to selected foreign-equity markets relative to our benchmarks, with a particular emphasis on the UK and Emerging Markets; 2) an underweight to large-cap growth stocks overall, with a specific underweight to Information Technology; 3) an overweight to small- stocks; and 4) on a sector basis, we remain overweight Consumer Staples, Healthcare and Telecommunications. We believe this positioning is sensible in the current environment, with broad diversification and targeted exposures to areas of the market that are attractive in our assessment.

Looking ahead, periods of heightened market volatility are likely to remain a feature rather than an exception in 2025. However, attempting to predict or react to every short-term move often leads to suboptimal investment decisions. The most effective approach is to recognise volatility as a normal part of investing, ensure that portfolios remain aligned with long-term objectives, and make adjustments only when warranted by changes in the investment plan, not by day-to-day market noise.

The fund adhered to its policy objectives.

## Disclaimer

The Morningstar Global Growth Fund is a sub-fund of the Prescient Global Funds ICAV, an open-ended umbrella type investment company, with segregated liability between its sub-funds, authorised by the Central Bank of Ireland, as an undertaking for collective investment in transferable securities under the European Communities (UCITS) Regulation, 2011 as amended (the Regulations). It is managed by Prescient Fund Services (Ireland) Limited at 35 Merrion Square East, Dublin 2, Ireland which is authorised by the Central Bank of Ireland, as a UCITS IV Management Company. The Prescient Global Funds ICAV full prospectus and the Fund's KIID are available free of charge (in English) from the Investment Manager or by visiting [www.prescient.ie](http://www.prescient.ie).

Collective Investment Schemes in Securities (CIS) should be considered as medium to long-term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CISs are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate. CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TERs. During the phase in period TERs do not include information gathered over a full year. Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macroeconomic risks, political risks, foreign exchange risks, tax risks, settlement risks, and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient Fund Services (Ireland) by or before 10h00 (Irish Time), to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut-off time Prescient shall not be obliged to transact at the net asset value price as agreed to. Funds are priced at 17h00 (New York Time).

Performance has been calculated using net NAV to NAV numbers with income reinvested.

For any additional information such as fund prices, brochures and application forms please go to [www.prescient.ie](http://www.prescient.ie).

## Glossary

**Annualised performance:** Annualised performance shows longer term performance rescaled to a 1-year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request.

**Sharpe Ratio:** The Sharpe ratio is used to indicate the excess return the portfolio delivers over the risk free rate per unit of risk adopted by the fund.

**Highest & Lowest return:** The highest and lowest returns for any 1 year over the period since inception have been shown.

**Standard Deviation:** The deviation of the return stream relative to its own average.

**NAV:** The net asset value represents the assets of a Fund less its liabilities.

**Max Drawdown:** The maximum peak to trough loss suffered by the Fund since inception.

**Alpha:** Denoted the outperformance of the fund over the benchmark.
