

PRESCIENT DEFENSIVE FUND (A1)

MINIMUM DISCLOSURE DOCUMENT

INVESTMENT AND RETURN OBJECTIVE

The Fund aims to achieve healthy real returns over the long term and to outperform the ASISA category average of the South African - Multi-Asset - Low Equity funds over a full market cycle by maintaining moderate exposure to growth assets like equities.

INVESTMENT PROCESS

This Fund invests in local and offshore money market, bonds and inflation-linked bonds, property, preference and ordinary shares, derivatives and unlisted instruments to meet the investment objectives. Fund performance can be generated from taking interest rate views or duration, yield enhancement via credit instruments, asset allocation and exposure equities.

WHO SHOULD INVEST

Investors seeking real returns coupled with a stable and attractive income yield via significant exposure to the South African interest bearing markets. Although the Fund's mandate allows investment up to 40% in equities, it is expected to have lower actual exposure on average. This Fund is suitable to investors with a medium to long-term investment horizon and is Regulation 28 compliant.

RISK INDICATOR DEFINITION

These portfolios typically have moderate equity exposure or in the case of bond funds, longer duration bond exposure, resulting in some capital volatility over the shorter term. They are managed in such a manner that the probability of capital losses over one year periods is unlikely. These portfolios typically target returns in the region of 3% - 4% above inflation over the long term.

Fee Breakdown:

New fund – data will be available 12 months after fund launch.

PRESCIENT DEFENSIVE FUND (A1)

FUND MONTHLY RETURNS

Not available - New Fund, data will be available 12 months after launch.

FUND COMMENTARY

After much anticipation, the closely contested race between Donald Trump and Kamala Harris concluded on November 5, with Trump emerging victorious, securing 277 electoral votes compared to Harris's 224. Trump is set to take office on January 20 and has already begun outlining key policy plans. One such proposal includes imposing tariffs on imports from the United States' three largest trading partners: China, Canada, and Mexico. Tariffs will likely raise costs for U.S. retailers, who in turn will pass on the increased expenses to consumers, contributing to higher prices and inflation, which could dampen U.S. economic growth. Under a Trump administration, global commodity prices may face downward pressure due to decreased demand for goods and services from other countries, as well as possible efforts to pressure Ukraine into ceding territory to Russia. Trump also plans to reduce the U.S. corporate tax rate from 21% to 15%, a move that could increase the federal budget deficit and limit the Federal Reserve's ability to lower interest rates. The reduction in corporate tax rates may also have an inflationary effect, potentially driving higher U.S. Treasury yields.

Locally, the South African Reserve Bank (SARB) held its final Monetary Policy Committee (MPC) meeting of the year in November and decided to lower the repo rate by 25 basis points. A 50-basis point rate cut was deemed unlikely due to concerns that Trump's policies could be inflationary, potentially leading to sustained dollar strength and a weaker Rand. Although the rate cut was widely anticipated, it was not the primary catalyst for the rally in local equities. The day before the SARB's decision, October's inflation data was released, showing a lower-than-expected reading of 2.8%, down from 3.8%. This marked the lowest inflation rate since June 2020, when it was 2.2% during the COVID-19 pandemic, signalling that inflation is slowing more than expected and contributing to positive market sentiment.

Over the course of November, the S&P 500 Index made a strong recovery, gaining 5.73% from last month, driven by a 6.21% gain in the tech-heavy Nasdaq Composite, which also saw a notable rebound. European indices, which faced downward pressure last month, managed to recover, with the Stoxx 600 Europe rising by 1.13%. In contrast, Japan's Nikkei fell by -2.23%. Overall, the MSCI World Index gained 4.47%, while the MSCI Emerging Markets (EM) Index dropped by -3.66%.

The All Share Total Return Index once again underperformed, losing 0.94%, with the mining sector struggling due to low commodity prices, a stronger U.S. dollar, and ongoing geopolitical tensions. While the equity market experienced negative performance throughout November, local nominal bonds returned 3.06%.

The Fund currently favours a neutral towards developed equity, SA bonds, SA Equity as well as emerging market equity. In addition, the Fund continues to hold a strongly positive view towards Rand strength.

The Fund was positive for the month, due to the good performance of developed market equity, while local and emerging market equity detracted for the month.

PRESCIENT DEFENSIVE FUND (A1)

GLOSSARY

Annualised performance: Annualised performance shows longer term performance rescaled to a 1 year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request.

Highest & Lowest performance: The highest and lowest performance for any 1 year over the period since inception have been shown.

NAV: The net asset value represents the assets of a Fund less its liabilities.

Current Yield: Annual income (interest or dividends) divided by the current price of the security.

CPU: Cents Per Unit to the Glossary

Sharpe Ratio: The Sharpe ratio is used to indicate the excess return the portfolio delivers over the risk free rate per unit of risk adopted by the fund.

Max Drawdown: The maximum peak to trough loss suffered by the Fund since inception.

% Positive Month: The percentage of months since inception where the Fund has delivered positive return.

Fund Specific Risks

Default Risk: The risk that the issuers of fixed income instruments may not be able to meet interest payments nor repay the money they have borrowed. The issuers credit quality is vital. The worse the credit quality, the greater the risk of default and therefore investment loss.

Derivatives risk: The use of derivatives could increase overall risk by magnifying the effect of both gains and losses in a Fund. As such, large changes in value and potentially large financial losses could result.

Developing Market (excluding SA) risk: Some of the countries invested in may have less developed legal, political, economic and/or other systems. These markets carry a higher risk of financial loss than those in countries generally regarded as being more developed.

Foreign Investment risk: Foreign securities investments may be subject to risks pertaining to overseas jurisdictions and markets, including (but not limited to) local liquidity, macroeconomic, political, tax, settlement risks and currency fluctuations.

Interest rate risk: The value of fixed income investments (e.g. bonds) tends to be inversely related to interest and inflation rates. Hence their value decreases when interest rates and/or inflation rises.

% Property risk: Investments in real estate securities can carry the same risks as investing directly in real estate itself. Real estate prices move in response to a variety of factors, including local, regional and national economic and political conditions, interest rates and tax considerations.

Currency exchange risk: Changes in the relative values of individual currencies may adversely affect the value of investments and any related income.

Geographic / Sector risk: For investments primarily concentrated in specific countries, geographical regions and/or industry sectors, their resulting value may decrease whilst portfolios more broadly invested might grow.

Derivative counterparty risk: A counterparty to a derivative transaction may experience a breakdown in meeting its obligations thereby leading to financial loss.

Liquidity risk: If there are insufficient buyers or sellers of particular investments, the result may lead to delays in trading and being able to make settlements, and/or large fluctuations in value. This may lead to larger financial losses than expected.

Equity investment risk: Value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects as well as more general market factors. In the event of a company default (e.g. bankruptcy), the owners of their equity rank last in terms of any financial payment from that company.

Information Disclosure

The portfolio has adhered to its policy objective and there were no material changes to the composition of the portfolio during the quarter.

PRESCIENT DEFENSIVE FUND (A1)

DISCLAIMER

Collective Investment Schemes in Securities (CIS) should be considered as medium to long-term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate. CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TERs. During the phase in period TERs do not include information gathered over a full year. Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction cost is a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macroeconomic risks, political risks, foreign exchange risks, tax risks, settlement risks; and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient by or before 11:00 (SA) for money market funds and the Prescient Optimised Income Fund and by or before 13:00 for all other funds, to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut-off time, Prescient shall not be obliged to transact at the net asset value price as agreed to. Funds are priced at either 3pm or 5pm depending on the nature of the Fund. Prices are published daily and are available on the Prescient website.

Performance has been calculated using net NAV to NAV numbers, including actual initial and all ongoing fees, with income reinvested on the reinvestment date. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request.

This portfolio operates as a white label fund under the Prescient Unit Trust Scheme, which is governed by the Collective Investment Schemes Control Act.
