

PRESCIENT GLOBAL INCOME PROVIDER FEEDER AMETF (A)

MINIMUM DISCLOSURE DOCUMENT & GENERAL INVESTOR REPORT

INVESTMENT AND RETURN OBJECTIVE

The underlying Fund aims to generate real return in US Dollars and is benchmarked to the US inflation rate, converted to Rands.

INVESTMENT PROCESS

The investment universe includes fixed, floating, real and nominal money market and bond market investments, property, derivatives and global currencies. Fund performance can be generated from taking interest rate views or duration, yield enhancement via credit instruments, asset allocation between income producing asset classes, the use of derivatives and currency management.

WHO SHOULD INVEST

Investors seeking a hedge against any rand depreciation while gaining exposure to high yielding offshore assets that are not available locally in South Africa. Although this is a roll-up fund and does not distribute income, it is suitable to investors with a medium to long-term investment horizon who wishes to fund income withdrawals by redeeming units, due to the exposure to yield generating assets held in the Fund and therefore a lower probability of selling underlying units at inappropriate times such as in a market downturn.

RISK INDICATOR DEFINITION

These portfolios typically have no or low equity exposure, resulting in higher interest yields and stable capital values with the probability of capital losses over the shorter term (3 months) highly unlikely. These portfolios typically target returns in the region of 1% – 3% above inflation before tax over the long term.

FUND COMMENTARY

Global fixed-income markets traded around a single dominant theme in June: the mid-month de-escalation of the US–Iran conflict. A ceasefire framework signed in mid-June, incorporating a 60-day truce and the reopening of the Strait of Hormuz, unwound the supply-risk premium that had pushed Brent above \$100 earlier in the year; the benchmark fell roughly 20% over the month to around \$73–74 per barrel, its steepest quarterly decline since 2020, as tanker traffic recovered and trapped Persian Gulf barrels returned to market. The collapse in energy prices eased the stagflationary impulse that had gripped markets since the first quarter and supported a broad-based improvement in risk appetite.

Developed-market rates reflected the two-sided nature of the news. The US 10-year Treasury yield fell below 4.5% as oil returned to pre-war levels, before rebounding toward 4.48% into month-end as newly appointed Fed Chair Kevin Warsh struck a hawkish tone, declaring that "prices are too high". Markets continue to price a better-than-even probability of a Fed hike by September, even as Warsh acknowledged inflation expectations had eased over the past month, leaving the front end anchored but volatile. The net result was a month of elevated intramonth swings but limited net movement in core yields, with the policy debate shifting from how much damage the oil shock would inflict to how quickly its inflationary residue fades.

The Fund's emphasis on high-quality carry and short-dated credit served it well through the volatility, while limited duration exposure contained mark-to-market swings. With the Fed debate unresolved, energy prices normalising and the truce yet to convert into a durable settlement, positioning remains conservative — favouring yield capture over directional rate risk, with flexibility to add duration should disinflation reassert itself into the second half.

Consistent with its objective of avoiding capital loss over rolling 12-month periods, the Fund remains positioned to navigate uncertain conditions while retaining the flexibility to allocate capital opportunistically as dislocations arise. Overall positioning remains balanced, prioritising capital preservation, stable income generation, and the ability to capture opportunities as global rate cycles evolve through 2026.

The Fund's forward yield remains attractive at 4.88%, with an interest rate duration of 2.43 years. The portfolio's current risk profile aligns with the Fund's risk objective, and we believe the Fund is well positioned to achieve its return objectives.

The Feeder Fund outperformed the underlying fund due to the Weakening of the ZAR during the month.

GLOSSARY

Annualised performance: Annualised performance shows longer term performance rescaled to a 1 year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request.

Highest & Lowest performance: The highest and lowest performance for any 1 year over the period since inception have been shown.

NAV: The net asset value represents the assets of a Fund less its liabilities.

Current Yield: Annual income (interest or dividends) divided by the current price of the security.

CPU: Cents Per Unit to the Glossary

Alpha: Denotes the outperformance of the fund over the benchmark.

Sharpe Ratio: The Sharpe ratio is used to indicate the excess return the portfolio delivers over the risk free rate per unit of risk adopted by the fund.

Standard Deviation: The deviation of the return stream relative to its own average.

Max Drawdown: The maximum peak to trough loss suffered by the Fund since inception.

Max Gain: Largest increase in any single month.

% Positive Month: The percentage of months since inception where the Fund has delivered positive return.

Average Duration: The weighted average duration of all the underlying interest bearing instruments in the Fund.

Forward Yield: The Forward Yield is the expected combined income of the instruments in the portfolio over the next year expressed as a percentage of the current value of those instruments.

Bid Price: The price a buyer is willing to pay for a security.

Offer Price (Ask Price): The price a seller is willing to accept for a security.

Bid/Offer Spread: The difference between the offer and bid prices, indicating market liquidity.

Fund Specific Risks

Default Risk: The risk that the issuers of fixed income instruments may not be able to meet interest payments nor repay the money they have borrowed. The issuers credit quality is vital. The worse the credit quality, the greater the risk of default and therefore investment loss.

Derivatives risk: The use of derivatives could increase overall risk by magnifying the effect of both gains and losses in a Fund. As such, large changes in value and potentially large financial losses could result.

Foreign Investment risk: Foreign securities investments may be subject to risks pertaining to overseas jurisdictions and markets, including (but not limited to) local liquidity, macroeconomic, political, tax, settlement risks and currency fluctuations.

Interest rate risk: The value of fixed income investments (e.g. bonds) tends to be inversely related to interest and inflation rates. Hence their value decreases when interest rates and/or inflation rises.

% Property risk: Investments in real estate securities can carry the same risks as investing directly in real estate itself. Real estate prices move in response to a variety of factors, including local, regional and national economic and political conditions, interest rates and tax considerations.

Currency exchange risk: Changes in the relative values of individual currencies may adversely affect the value of investments and any related income.

Derivative counterparty risk: A counterparty to a derivative transaction may experience a breakdown in meeting its obligations thereby leading to financial loss.

Liquidity risk: If there are insufficient buyers or sellers of particular investments, the result may lead to delays in trading and being able to make settlements, and/or large fluctuations in value. This may lead to larger financial losses than expected.

Information Disclosure

The portfolio has adhered to its policy objective and there were no material changes to the composition of the portfolio during the quarter.

DISCLAIMER

Collective Investment Schemes in Securities (CIS) should be considered as medium to long-term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CISs are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate. CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's. During the phase in period TER's do not include information gathered over a full year. Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

A Feeder Fund is a portfolio that invests in a single portfolio of a collective investment scheme which levies its own charges, and which could result in a higher fee structure for the feeder fund.

Where a current yield has been included for Funds that derive its income primarily from interest bearing income, the yield is a weighted average yield of all underlying interest-bearing instruments as at the last day of the month. This yield is subject to change as market rates and underlying investments change.

Exchange traded funds are listed on an exchange and may incur additional costs.

The Manager retains full legal responsibility for any third party-named portfolio. Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macroeconomic risks, political risks, foreign exchange risks, tax risks, settlement risks, and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees.

Performance has been calculated using net NAV to NAV numbers with income reinvested. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request.

Exchange Traded Funds vs Unit Trusts: Whilst both unit trusts and ETFs are regulated and registered under the Collective Investment Schemes Control Act, ETFs trade on stock exchanges just like any other listed, tradable security. Unlike a unit trust, which can be bought or sold only at the end of the trading day, an ETF can be traded intraday, during exchange trading hours.

For any additional information such as fund prices, brochures and application forms please go to www.prescient.co.za.

This portfolio operates as a white label fund under the Prescient ETF Scheme, which is governed by the Collective Investment Schemes Control Act.
