

FUND OBJECTIVE & STRATEGY

The investment objective of the Fund is to provide long term capital appreciation and income growth through investment in a concentrated portfolio of assets. The fund is primarily exposed to a focused portfolio of developed market equities. The fund is managed on the basis of the long term ownership of assets and has a bias towards high quality ideas. Investors with a time horizon of three to five years are ideally suited to this fund.

FUND INFORMATION

Portfolio Managers:	ClucasGray (Pty) Ltd
Inception Date:	15 June 2023
Fund Domicile:	Ireland
Fund Classification:	Global UCITS
ISIN:	IE000R3P36G3
Bloomberg Code:	PGCGGFA ID
Base Currency:	USD
Fund Size:	\$54,6 million
Unit Price:	103.2
Benchmark:	Morningstar EEA Fund USD Aggressive Allocation
Min Transaction Size:	\$2 500
Issue Date:	23 February 2024
Financial Year End:	31 December
Distributions:	Accumulation

USD PERFORMANCE

Due to FSCA regulations, performance will be available after one year.

If you would like more information on the ClucasGray Global Fund, please contact us at ClientRelations@ClucasGray.co.za and we can send this to you.

NET PERFORMANCE - USD

RISK & FUND STATS (ANNUALISED SINCE INCEPTION)

ROLLING ANNUAL RETURN

Due to FSCA regulations, performance will be available after one year.

WHO SHOULD INVEST

The Fund is an ideal wealth creation vehicle for investors with a medium to long-term investment horizon.

RISK INDICATOR

The value of your investments can fall. You can receive back less than you invested. These funds typically exhibit more volatility given their higher exposure to equities and offshore markets where currency fluctuations may result in capital losses.

MONTHLY COMMENTARY

The CGGF NAV per share rose +1.1%, outperforming both the Morningstar Aggressive Allocation peer group (+0.2%) and the MSCI All Country World Index (+0.5%).

After a weak start to the month, global equities ended January on a strong note driven by robust earnings from large-cap technology stocks. Gains were concentrated in US markets (S&P500 +1.6%), and in leading technology companies with high index weightings, as seen by a negative performance in the residual index (MSCI World equal-weight -4.1%). A material strengthening of the US dollar weighed on the USD performance of European markets (Stoxx50 +0.8%), while the bear market in Chinese equities extended further (CSI300 -7.2%). On a sectoral basis, tech-related sectors Communication Services (+2.9%) and Information Technology (+3.2%) outperformed while Materials (-5.2%) and Utilities (-3.0%) underperformed.

Global Manufacturing has stabilised but remains in recession, with PMIs in the US (49.1), EU (46.6) and China (49.2) all showing sequential improvements. Global Services PMIs accelerated in the US (53.4) while weakening in the EU (48.4) and China (52.7). The US economy added significantly more jobs than expected last month (+353 000) with unemployment remaining at historic lows (3.7%), a positive sign for the consumer outlook but a potential driver of inflation through growing wages.

The largest positive contributor to the Fund's performance was Nvidia, which continued to rally on strong positive sentiment and high expectations for Artificial Intelligence market growth. ASML Holdings, further up the semiconductor supply chain, also rose sharply. The largest negative contributor to performance was Samsung, which plays in the more commoditised end of semiconductors. We do, however, believe the company has passed the low point of its typical business cycle with a clear upturn in key end markets.

The Fund initiated a new position in PepsiCo, funded through the sale of British American Tobacco. We view Pepsi as a higher quality company, producing structurally higher growth, without being constrained by high debt levels. The Fund also initiated a position in Taiwan Semiconductor Manufacturing Company (TSMC), an essential global player in the semiconductor value chain. The Fund exited the position in Prosus due to the reappearance of highly unpredictable regulatory challenges in the Chinese gaming sector.

At the end of the month the Fund had an underlying exposure to equities of 87.4%, property 4.0%, fixed income 3.0% and cash 5.6%.

FEE STRUCTURE

TER, TC and TIC figures are not available due to this being a new Fund. These will be available a year after inception.

TER	Class A	Class B
Annual Management Fee (excl. VAT)	1.5% pa	1.0% pa
Other Cost		
VAT

DISCLAIMER

Collective Investment Schemes in Securities (CIS) should be considered as medium to long-term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate. CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's. During the phase in period TER's do not include information gathered over a full year.

Transaction Costs(TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macroeconomic risks, political risks, foreign exchange risks, tax risks, settlement risks; and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient Fund Services (Ireland) by or before 10h00 (Irish Time), to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut off time Prescient Funds Services (Ireland) shall not be obliged to transact at the net asset value price as agreed to. Funds are priced at 17h00 (New York Time). Prices are published daily and are available on the Prescient website. Performance has been calculated using net NAV to NAV numbers with income reinvested.

Alpha: Denoted the outperformance of the fund over the benchmark.

Sharpe Ratio: The Sharpe ratio is used to indicate the excess return the portfolio delivers over the risk free rate per unit of risk adopted by the fund.

Standard Deviation: The deviation of the return stream relative to its own average.

Max Drawdown: The maximum peak to trough loss suffered by the Fund since inception.

% Positive Months: The percentage of months since inception where the Fund has delivered positive returns.

Equity investment risk: Value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects as well as more general market factors. In the event of a company default (e.g. bankruptcy), the owners of their equity rank last in terms of any financial payment from that company.

Foreign Investment risk: Foreign securities investments may be subject to risks pertaining to overseas jurisdictions and markets, including (but not limited to) local liquidity, macroeconomic, political, tax, settlement risks and currency fluctuations.

Interest rate risk: The value of fixed income investments (e.g. bonds) tends to be inversely related to interest and inflation rates. Hence their value decreases when interest rates and/or inflation rises.

Property risk: Investments in real estate securities can carry the same risks as investing directly in real estate itself. Real estate prices move in response to a variety of factors, including local, regional and national economic and political conditions, interest rates and tax considerations.

Currency exchange risk: Changes in the relative values of individual currencies may adversely affect the value of investments and any related income.

Liquidity risk: If there are insufficient buyers or sellers of particular investments, the result may lead to delays in trading and being able to make settlements, and/or large fluctuations in value. This may lead to larger financial losses than expected.

Default risk: The risk that the issuers of fixed income instruments (e.g. bonds) may not be able to meet interest payments nor repay the money they have borrowed. The issuers credit quality is vital. The worse the credit quality, the greater the risk of default and therefore investment loss.

Developing Market (excluding SA) risk: Some of the countries invested in may have less developed legal, political, economic and/or other systems. These markets carry a higher risk of financial loss than those in countries generally regarded as being more developed.
