INVESTMENT STRATEGY

The Fund is part of the Sarasin Managed Fund range which offers funds with different expected combinations of investment risk and return. The Fund takes a balanced approach and will have a higher strategic weighting to investments that have the potential for greater returns but come with a higher risk of losing capital, principally shares, with a lower strategic weighting to bonds and cash, which typically have lower risk. The Fund therefore aims to achieve a moderate level of risk and return.

RISK PROFILE

Lower Risk — Higher Risk
Potentially lower rewards — Potentially higher rewards

The Risk and Reward Indicator table demonstrates where the Fund ranks in terms of its potential risk and return. It is based upon how the Fund has performed in the past and you should note that the Fund may well perform differently in the future. The risk category shown is not guaranteed and may shift over time.
The higher the rank the greater the potential reward but the greater the risk of losing money.
The Fund is ranked at 4 reflecting observed historical returns. The fund is in this category because it has shown moderate levels of volatility historically.

Derivatives risk: The use of derivatives could increase overall risk by magnifying the effect of both gains and losses in a Fund. As such, large changes in value and potentially large financial losses could result
Foreign Investment risk: Foreign securities investments may be subject to risks pertaining to overseas jurisdictions and markets, including (but not limited to) local liquidity, macroeconomic, political, tax, settlement risks and currency fluctuations.
Currency exchange risk: Changes in the relative values of individual currencies may adversely affect the value of investments and any related income.
Liquidity risk: If there are insufficient buyers or sellers of particular investments, the result may lead to delays in trading and being able to make settlements, and/or large fluctuations in value. This may lead to larger financial losses than expected.
Equity investment risk: Value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects as well as more general market factors. In the event of a company default (e.g. bankruptcy), the owners of their equity rank last in terms of any financial payment from that company.
