

PRESCIENT BALANCED FEEDER ACTIVELY MANAGED ETF (A)

MINIMUM DISCLOSURE DOCUMENT

INVESTMENT AND RETURN OBJECTIVE

The Fund aims to deliver significant real returns over the long term and to outperform the ASISA category average of the South African - Multi-Asset - High Equity funds over a full market cycle by maintaining meaningful exposure to growth assets like equities.

INVESTMENT PROCESS

The Fund invests in a diverse range of assets including equities and interest-bearing instruments, both domestically and offshore. The asset allocation is anchored at the long-term strategic allocation but can be varied tactically to target outperformance of the benchmark by capitalising on signals of significant market mispricing. Where possible, a process of enhanced indexation is utilised within asset classes to deliver stable incremental alpha.

WHO SHOULD INVEST

Investors seeking significant real returns over the long term but who are cost conscious. The Fund is suitable for investors with a medium to long-term investment horizon and is Regulation 28 compliant.

RISK INDICATOR DEFINITION

These portfolios typically exhibit more volatility and potential for capital losses due to higher exposure to equities and exposure to offshore markets where currency fluctuations may result in capital losses. These portfolios typically target returns in the region of 5% - 6% above inflation over the long term.

RISK INDICATOR

ANNUALISED PERFORMANCE (%)	CUMULATIVE PERFORMANCE
Not available - New Fund, data will be available 12 months after launch.	Not available - New Fund, data will be available 12 months after launch.
ANNUALISED PERFORMANCE (%)	RISK AND FUND STATS

FUND COMMENTARY

Fund commentary will be available on the next MDD.

PRESCIENT BALANCED FEEDER ACTIVELY MANAGED ETF (A)

GLOSSARY

Annualised performance: Annualised performance shows longer term performance rescaled to a 1 year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request.

Highest & Lowest performance: The highest and lowest performance for any 1 year over the period since inception have been shown.

NAV: The net asset value represents the assets of a Fund less its liabilities.

Current Yield: Annual income (interest or dividends) divided by the current price of the security.

CPU: Cents Per Unit to the Glossary

Alpha: Denotes the outperformance of the fund over the benchmark.

Sharpe Ratio: The Sharpe ratio is used to indicate the excess return the portfolio delivers over the risk free rate per unit of risk adopted by the fund.

Standard Deviation: The deviation of the return stream relative to its own average.

% Positive Month: The percentage of months since inception where the Fund has delivered positive return.

Average Duration: The weighted average duration of all the underlying interest bearing instruments in the Fund.

Forward Yield: The Forward Yield is the expected combined income of the instruments in the portfolio over the next year expressed as a percentage of the current value of those instruments.

Fund Specific Risks

Default Risk: The risk that the issuers of fixed income instruments may not be able to meet interest payments nor repay the money they have borrowed. The issuers credit quality is vital. The worse the credit quality, the greater the risk of default and therefore investment loss.

Derivatives risk: The use of derivatives could increase overall risk by magnifying the effect of both gains and losses in a Fund. As such, large changes in value and potentially large financial losses could result.

Developing Market (excluding SA) risk: Some of the countries invested in may have less developed legal, political, economic and/or other systems. These markets carry a higher risk of financial loss than those in countries generally regarded as being more developed.

Interest rate risk: The value of fixed income investments (e.g. bonds) tends to be inversely related to interest and inflation rates. Hence their value decreases when interest rates and/or inflation rises.

% Property risk: Investments in real estate securities can carry the same risks as investing directly in real estate itself. Real estate prices move in response to a variety of factors, including local, regional and national economic and political conditions, interest rates and tax considerations.

DISCLAIMER

Collective Investment Schemes in Securities (CIS) should be considered as medium to long-term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CISs are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate. CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's. During the phase in period TER's do not include information gathered over a full year. Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

A Feeder Fund is a portfolio that invests in a single portfolio of a collective investment scheme which levies its own charges, and which could result in a higher fee structure for the feeder fund.

Exchange traded funds are listed on an exchange and may incur additional costs.

The Manager retains full legal responsibility for any third party-named portfolio. Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macroeconomic risks, political risks, foreign exchange risks, tax risks, settlement risks, and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees.

Performance has been calculated using net NAV to NAV numbers with income reinvested.

Exchange Traded Funds vs Unit Trusts: Whilst both unit trusts and ETFs are regulated and registered under the Collective Investment Schemes Control Act, ETFs trade on stock exchanges just like any other listed, tradable security. Unlike a unit trust, which can be bought or sold only at the end of the trading day, an ETF can be traded intraday, during exchange trading hours.
