

# PRESCIENT CORE GLOBAL EMERGING MARKETS EQUITY FUND (B)

## MINIMUM DISCLOSURE DOCUMENT

### INVESTMENT AND RETURN OBJECTIVE

The Fund aims to deliver returns close to the MSCI Emerging Markets Index Total Return at low cost. Although the Fund is structured similarly to the MSCI Emerging Markets Index, it is not a tracker fund and can out / underperform the MSCI Emerging Markets Index by small amounts over time.

### INVESTMENT PROCESS

The Fund follows an investment process which firstly endeavours to follow the composition of the MSCI Emerging Markets Index closely and secondly seeks enhancement opportunities to secure for investors an optimum overall return. The Fund can use derivatives to create exposure to the MSCI Emerging Markets Index or subsets thereof in a low cost and efficient manner.

### WHO SHOULD INVEST

Investors who are seeking long term capital growth through diversified exposure to the global markets by investing in a fund with a low tracking error relative to the MSCI Emerging Markets Index and who are cost conscious.

### RISK INDICATOR DEFINITION

These portfolios typically hold meaningful equity and/or offshore exposure which may result in significant capital volatility over all periods. Due to their nature expected long term returns are higher than for the other risk categories.

## FUND COMMENTARY

The positive momentum in global equity markets extended into February, although performance was more uneven across regions and sectors as investors digested shifting expectations around monetary policy and growth. While the broader risk-on backdrop remained intact, market leadership rotated meaningfully during the month, reflecting a continued broadening of participation beyond the dominant technology segment. The MSCI World Index finished February up 0.73%, taking year-to-date returns to 2.99%.

In the United States, equity markets paused following the strong start to the year. The S&P 500 declined 0.76% for the month, as some profit-taking emerged within the technology complex following an extended period of outperformance. Investors remained focused on the trajectory of inflation and the timing of potential policy easing, with stronger-than-expected economic data reinforcing the view that interest rates may remain elevated for longer than previously anticipated.

European equities delivered a more constructive outcome. The Euro Stoxx Index rose 3.00% in February, extending its strong start to the year. Performance was supported by improving economic sentiment, stabilising inflation dynamics and continued resilience in corporate earnings. Cyclical sectors benefited from the improved outlook, contributing to the region's relative outperformance.

Japan remained one of the strongest performing developed markets. The Nikkei 225 surged 9.23% during the month, reflecting robust corporate earnings momentum, continued corporate governance reforms and sustained foreign investor inflows. Currency dynamics and improving domestic demand conditions also supported the market's strong performance.

Emerging markets delivered solid gains overall. The MSCI Emerging Markets Index advanced 5.50% in February, materially outperforming developed market peers. Strength was broad-based across several commodity-linked and Asian markets. Within China, the CSI 300 Index rose 1.42% as targeted policy support and improved investor sentiment continued to stabilise the domestic equity market.

Locally, South African equities delivered a strong month. The FTSE/JSE All Share Index climbed 7.01%, with performance driven largely by resource-linked companies amid a sharp rebound in commodity prices. Basic materials were the standout sector, surging 13.42% for the month and extending their year-to-date gains to 27.80%. Financials also delivered solid returns, rising 7.32%, supported by improving investor sentiment and robust earnings expectations. In contrast, the technology sector declined 10.63%, reflecting ongoing volatility within global technology shares.

Overall, February reinforced the theme of widening market participation across both regions and sectors. While macroeconomic uncertainty remains present, the combination of resilient economic activity, stabilising inflation trends and supportive policy expectations continues to provide a constructive backdrop for global risk assets.

The top contributors to the Fund's performance for the month were Samsung Electronics Co Ltd (35.26%), Taiwan Semiconductor (12.39%) and SK hynix Inc (17.79%). Detractors included Tencent Holdings Ltd (-14.52%), Alibaba Group Holding Ltd (-15.54%) and Infosys Ltd (-20.77%).

## GLOSSARY

**Annualised performance:** Annualised performance shows longer term performance rescaled to a 1 year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request.

**Highest & Lowest performance:** The highest and lowest performance for any 1 year over the period since inception have been shown.

**NAV:** The net asset value represents the assets of a Fund less its liabilities.

**Current Yield:** Annual income (interest or dividends) divided by the current price of the security.

**CPU:** Cents Per Unit to the Glossary

**Alpha:** Denotes the outperformance of the fund over the benchmark.

**Sharpe Ratio:** The Sharpe ratio is used to indicate the excess return the portfolio delivers over the risk free rate per unit of risk adopted by the fund.

**Standard Deviation:** The deviation of the return stream relative to its own average.

**Max Drawdown:** The maximum peak to trough loss suffered by the Fund since inception.

**Dividend Yield:** The weighted average dividend yield of all the underlying equity in the Fund. The dividend yield of each company is the dividends per share divided by the price.

**PE Ratio:** The weighted average price earnings ratio of all the underlying equity in the Fund. The price earnings ratio of each company is the price divided by the earnings per share.

## Fund Specific Risks

**Default Risk:** The risk that the issuers of fixed income instruments may not be able to meet interest payments nor repay the money they have borrowed. The issuers credit quality is vital. The worse the credit quality, the greater the risk of default and therefore investment loss.

**Derivatives risk:** The use of derivatives could increase overall risk by magnifying the effect of both gains and losses in a Fund. As such, large changes in value and potentially large financial losses could result.

**Interest rate risk:** The value of fixed income investments (e.g. bonds) tends to be inversely related to interest and inflation rates. Hence their value decreases when interest rates and/or inflation rises.

**% Property risk:** Investments in real estate securities can carry the same risks as investing directly in real estate itself. Real estate prices move in response to a variety of factors, including local, regional and national economic and political conditions, interest rates and tax considerations.

**Geographic / Sector risk:** For investments primarily concentrated in specific countries, geographical regions and/or industry sectors, their resulting value may decrease whilst portfolios more broadly invested might grow.

**Derivative counterparty risk:** A counterparty to a derivative transaction may experience a breakdown in meeting its obligations thereby leading to financial loss.

**Equity investment risk:** Value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects as well as more general market factors. In the event of a company default (e.g. bankruptcy), the owners of their equity rank last in terms of any financial payment from that company.

## Information Disclosure

The portfolio has adhered to its policy objective and there were no material changes to the composition of the portfolio during the quarter.

## DISCLAIMER

Collective Investment Schemes in Securities (CIS) should be considered as medium to long-term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate. CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's. During the phase in period TER's do not include information gathered over a full year. Transaction Costs(TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction cost are a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

Where a current yield has been included for Funds that derive its income primarily from interest bearing income, the yield is a weighted average yield of all underlying interest bearing instruments as at the last day of the month. This yield is subject to change as market rates and underlying investments change.

The Manager retains full legal responsibility for any third-party-named portfolio. Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macroeconomic risks, political risks, foreign exchange risks, tax risks, settlement risks; and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient Global Funds ICAV by or before 10h00 (Irish Time), to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut off time Prescient shall not be obliged to transact at the net asset value price as agreed to. Funds are priced at 17h00 (New York Time). Prices are published daily and are available on the Prescient website.

Performance has been calculated using net NAV to NAV numbers with income reinvested. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request.

The fund is registered and approved under section 65 of the Collective Investment Schemes Control Act 45 of 2002.
