

## Interactive Global Equity Prescient Fund of Funds A

### INVESTMENT OBJECTIVE

The Fund will aim to deliver returns in excess of the benchmark over a long term time horizon.

### INVESTMENT POLICY

The fund aims to achieve this by investing predominantly into global equities. This is performed through active and unconstrained management in both South African and foreign markets with a focus on equity opportunities within the offshore markets. The Fund will, apart from assets in liquid form, consist solely of participatory interest in Collective Investment Schemes which will invest in a diversified mix of assets, including but not limited to equities, property, preference shares, money market and fixed interest instruments. The underlying collective investment schemes are permitted to invest in listed and unlisted financial instruments in line with conditions as determined by legislation from time to time. The Fund will adhere to investment conditions determined by legislation from time to time.

### HOW WE AIM TO MEET THE FUND'S OBJECTIVE

The management team track the asset allocation of reputable asset managers with large research capabilities. The research provides insight into where top professionals are allocating assets. We build portfolios in line with these allocations and select ETF's as the underlying investment instruments. Contact [info@interactiveportfolios.co.za](mailto:info@interactiveportfolios.co.za) to find out more

### FUND COMMENTARY

The Interactive Global Equity Pres FOF A delivered a return of +4.62% for the second quarter of 2025, rebounding from Q1 losses as global equities recovered amid a temporary suspension of US tariffs and easing recession fears. Improved sentiment around artificial intelligence, resilient corporate earnings, and sector rotation into growth-oriented assets supported fund performance.

The primary contributors to the fund's recovery were its US growth and technology exposures. The Invesco QQQ Trust led gains with a return of +13.82%, reflecting renewed investor enthusiasm for AI and the "Magnificent Seven" stocks. Similarly, the iShares Core S&P 500 ETF (+7.19%) and Vanguard FTSE All-World ex-US ETF (+7.83%) posted strong results, driven by broad-based equity strength in both US and international markets.

Quality and moat-focused strategies also contributed positively, with the iShares MSCI USA Quality Factor ETF returning +3.58% and the VanEck Morningstar Wide Moat ETF up +3.06%. These holdings benefited from their exposure to durable, well-managed businesses as market confidence improved.

However, the fund's overall return was moderated by weakness in dividend strategies. The Schwab US Dividend Equity ETF was the sole significant detractor, declining -7.45%, as investors rotated out of defensive, income-generating equities in favor of higher-growth sectors.

Overall, the quarter highlighted the benefits of maintaining a diversified, balanced approach. Exposure to both global and factor-diverse strategies helped the fund participate in the market rebound, reinforcing the importance of disciplined long-term positioning through periods of macro uncertainty and policy-driven volatility.

### GLOSSARY

**Fund of Funds:** A Fund of Funds is a portfolio that invests in portfolios of collective investment schemes, which levy their own charges, which could result in a higher fee structure for these portfolios.

**Annualised performance:** Annualised performance shows longer term performance rescaled to a 1 year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request.

**Highest & Lowest performance:** The highest and lowest performance for any 1 year over the period since inception have been shown.

**NAV:** The net asset value represents the assets of a Fund less its liabilities.

**Current Yield:** Annual income (interest or dividends) divided by the current price of the security.

**CPU:** Cents Per Unit to the Glossary

**Alpha:** Denotes the outperformance of the fund over the benchmark.

**Sharpe Ratio:** The Sharpe ratio is used to indicate the excess return the portfolio delivers over the risk free rate per unit of risk adopted by the fund.

**Standard Deviation:** The deviation of the return stream relative to its own average.

**Max Drawdown:** The maximum peak to trough loss suffered by the Fund since inception.

**% Positive Month:** The percentage of months since inception where the Fund has delivered positive return.

### INFORMATION & DISCLOSURES

#### FUND SPECIFIC RISK

**Default Risk:** The risk that the issuers of fixed income instruments may not be able to meet interest payments nor repay the money they have borrowed. The issuers credit quality is vital. The worse the credit quality, the greater the risk of default and therefore investment loss.

**Derivatives risk:** The use of derivatives could increase overall risk by magnifying the effect of both gains and losses in a Fund. As such, large changes in value and potentially large financial losses could result.

**Developing Market (excluding SA) risk:** Some of the countries invested in may have less developed legal, political, economic and/or other systems. These markets carry a higher risk of financial loss than those in countries generally regarded as being more developed.

**Foreign Investment risk:** Foreign securities investments may be subject to risks pertaining to overseas jurisdictions and markets, including (but not limited to) local liquidity, macroeconomic, political, tax, settlement risks and currency fluctuations.

**Interest rate risk:** The value of fixed income investments (e.g. bonds) tends to be inversely related to interest and inflation rates. Hence their value decreases when interest rates and/or inflation rises.

**Property risk:** Investments in real estate securities can carry the same risks as investing directly in real estate itself. Real estate prices move in response to a variety of factors, including local, regional and national economic and political conditions, interest rates and tax considerations.

**Currency exchange risk:** Changes in the relative values of individual currencies may adversely affect the value of investments and any related income.

**Geographic / Sector risk:** For investments primarily concentrated in specific countries, geographical regions and/or industry sectors, their resulting value may decrease whilst portfolios more broadly invested might grow.

**Derivative counterparty risk:** A counterparty to a derivative transaction may experience a breakdown in meeting its obligations thereby leading to financial loss.

**Liquidity risk:** If there are insufficient buyers or sellers of particular investments, the result may lead to delays in trading and being able to make settlements, and/or large fluctuations in value. This may lead to larger financial losses than expected.

**Equity investment risk:** Value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects as well as more general market factors. In the event of a company default (e.g. bankruptcy), the owners of their equity rank last in terms of any financial payment from that company.

#### DISCLAIMER

Collective Investment Schemes in Securities (CIS) should be considered as medium to long-term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate. CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TERs. During the phase in period TERs do not include information gathered over a full year. Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction cost is a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER. Where a current yield has been included for Funds that derive its income primarily from interest bearing income, the yield is a weighted average yield of all underlying interest bearing instruments as at the last day of the month. This yield is subject to change as market rates and underlying investments change.

The Manager retains full legal responsibility for any third-party-named portfolio. Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macroeconomic risks, political risks, foreign exchange risks, tax risks, settlement risks; and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient by or before 13:00 (SA), to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut-off time, Prescient shall not be obliged to transact at the net asset value price as agreed to. Funds are priced at either 3pm or 5pm depending on the nature of the Fund. Prices are published daily and are available on the Prescient website.

Performance has been calculated using net NAV to NAV numbers, including actual initial and all ongoing fees, with income reinvested on the reinvestment date. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request.

This portfolio operates as a white label fund under the Prescient Unit Trust Scheme, which is governed by the Collective Investment Schemes Control Act.

For any additional information such as fund prices, brochures and application forms please go to [www.prescient.co.za](http://www.prescient.co.za)

The portfolio has adhered to its policy objective and there were no material changes to the composition of the Fund portfolio during the quarter.
