INN8 INVEST WEALTH STABLE PRESCIENT FUND OF FUNDS

MINIMUM DISCLOSURE DOCUMENT

30 OCTOBER 2026

Investment Policy

This is a multi-asset class portfolio that is diversified across asset classes, sectors, various strategies and asset managers - both in South Africa and internationally. The Fund is actively managed with a maximum equity exposure (including international equity) of up to 40%, in line with the ASISA South African - Multi Asset - Low Equity category. The Fund complies with provisions of the Collective Investment Schemes Control Act, No. 45 of 2002 and its Regulations, as amended from time to time.

Investment Objectives

The Fund's main objective is to deliver consistent growth of capital and income, with a low probability of capital loss over the short to medium term. Its objective is to outperform the relevant ASISA category average return, while aiming to achieve inflation-beating returns of CPI+3% a year over rolling four-year periods.

Suitable Investors

Are those investors who:

- wish to diversify single manager risk;
- want a multi-asset class solution;
- are investing to achieve goals in the short to medium term;
- seek inflation-beating returns with moderately conservative levels of risk.

Risk profile and minimum investment period

Glossary

Annualised Performance: Annualised performance shows longer term performance rescaled to a 1 year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request.
Highest & Lowest Performance: The highest and lowest performance for any 1 year over the period since inception have been shown.
NAV: The net asset value represents the assets of a Fund less its liabilities.
Current Yield: Annual income (interest or dividends) divided by the current price of the security.
Alpha: Denotes the outperformance of the fund over the benchmark.
Sharpe Ratio: The Sharpe ratio is used to indicate the excess return the portfolio delivers over the risk free rate per unit of risk adopted by the fund.
Sortino Ratio: A measure of the risk-adjusted return of a portfolio. It is a modification of the Sharpe ratio but only penalises the returns falling below a user specified target, or required rate of return, while the Sharpe ratio penalises both upside and downside volatility equally.
Standard Deviation: The deviation of the return stream relative to its own average.
Max Drawdown: The maximum peak to trough loss suffered by the Fund since inception.
Max Gain: Largest increase in any single month.
% Positive Month: The percentage of months since inception where the Fund has delivered positive return.
Average Duration: The weighted average duration of all the underlying interest bearing instruments in the Fund.
Total Expense Ratio (TER%): The Total Expense Ratio (TER) is the percentage of the net asset value of the class of the Financial Product incurred as expenses relating to the administration of the Financial Product.
Performance fee incl. in TER (%) PF (%): The Performance Fee is a payment made to the Fund Manager for generating outperformance and is generally calculated as percentage of outperformance, often both realized and unrealized.
Transaction Costs (TC%): The Transaction Costs (TC) is the percentage of the net asset value of the Financial Product incurred as costs relating to the buying and selling of the assets underlying the Financial Product.
Total Investment Charges TIC (%) = TER (%) + TC (%): The Total Investment Charges (TIC), the TER + the TC, is the percentage of the net asset value of the class of the Financial Product incurred as costs relating to the investment of the Financial Product. It should be noted that a TIC is the sum of two calculated ratios (TER+TC).

Fund Specific Risks

Default Risk: The risk that the issuers of fixed income instruments may not be able to meet interest payments nor repay the money they have borrowed. The issuers credit quality is vital. The worse the credit quality, the greater the risk of default and therefore investment loss.
Derivatives Risk: The use of derivatives could increase overall risk by magnifying the effect of both gains and losses in a Fund. As such, large changes in value and potentially large financial losses could result.
Derivative Counterparty Risk: A counterparty to a derivative transaction may experience a breakdown in meeting its obligations thereby leading to financial loss.
Liquidity Risk: If there are insufficient buyers or sellers of particular investments, the result may lead to delays in trading and being able to make settlements, and/or large fluctuations in value. This may lead to larger financial losses than expected.
Fund of Funds: A Fund of Funds is a portfolio that invests in portfolios of collective investment schemes, which levy their own charges, which could result in a higher fee structure for these portfolios.

Risk Indicator Definition

This portfolio can invest across the duration spectrum from money market to long bonds, which can result in capital volatility over the shorter term and deviation from the benchmark. It is managed in such a manner that the probability of capital losses over one-year periods is unlikely. This portfolio typically targets a return in the region of 2% - 3% above inflation before tax over the long term.

Disclaimer

Collective Investment Schemes in Securities (CIS) should be considered as medium to long term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate.

CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's. During the phase in period TER's do not include information gathered over a full year. Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

The Manager retains full legal responsibility for any third party named portfolio. Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macro economic risks, political risks, foreign exchange risks, tax risks, settlement risks; and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient by or before 13:00 (SA), to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut off time Prescient shall not be obliged to transact at the net asset value price as agreed to. Funds are priced at either 3pm or 5pm depending on the nature of the Fund. Prices are published daily and are available on the Prescient website.

This portfolio operates as a white label fund under the Prescient Unit Trust Scheme, which is governed by the Collective Investment Schemes Control Act.

Performance has been calculated using net NAV to NAV numbers with income reinvested.
