

PRESCIENT DEFENSIVE FUND (A2)

MINIMUM DISCLOSURE DOCUMENT

INVESTMENT AND RETURN OBJECTIVE

The Fund aims to achieve healthy real returns over the long term and to outperform the ASISA category average of the South African - Multi-Asset - Low Equity funds over a full market cycle by maintaining moderate exposure to growth assets like equities.

INVESTMENT PROCESS

This Fund invests in local and offshore money market, bonds and inflation-linked bonds, property, preference and ordinary shares, derivatives and unlisted instruments to meet the investment objectives. Fund performance can be generated from taking interest rate views or duration, yield enhancement via credit instruments, asset allocation and exposure equities.

WHO SHOULD INVEST

Investors seeking real returns coupled with a stable and attractive income yield via significant exposure to the South African interest bearing markets. Although the Fund's mandate allows investment up to 40% in equities, it is expected to have lower actual exposure on average. This Fund is suitable to investors with a medium to long-term investment horizon and is Regulation 28 compliant.

RISK INDICATOR DEFINITION

These portfolios typically have moderate equity exposure or in the case of bond funds, longer duration bond exposure, resulting in some capital volatility over the shorter term. They are managed in such a manner that the probability of capital losses over one year periods is unlikely. These portfolios typically target returns in the region of 3% - 4% above inflation over the long term.

FUND COMMENTARY

In its recent meeting, the US Federal Reserve indicated a pause in raising interest rates but emphasized that it's not ready to cut rates, with a March decrease becoming increasingly unlikely. Federal Reserve Chair Jerome Powell suggested a potential delay beyond March for rate cuts, pending more economic data to confirm inflation heading down to 2%. The US treasury index ended January just 0.3% lower, reflecting a market repricing of forward interest rate expectations. A month ago, participants anticipated over a 50% chance of a cut in March and around 170 basis points of cuts by January 2024, but these expectations have now decreased to 18% and 130 basis points worth of cuts by the end of January next year.

In December, inflation in the United States exceeded expectations. The consumer price index (CPI) increased by 0.3% for the month, surpassing the estimated 0.2%. On a 12-month basis, the CPI for 2023 closed with a 3.4% increase, notably lower than the 6.4% gain recorded in December 2022. In the United Kingdom, the headline CPI rose by 0.4% month-on-month, while Year-on-year UK inflation rose to 4% in December, driven by increases in alcohol and tobacco prices. Eurozone headline inflation slightly eased in January, according to flash figures published by the European Union's statistics agency. However, core inflation figures declined less than expected. Japan, the world's third-largest economy, saw its headline inflation rate decrease to its lowest level since June 2022, cooling to 2.6% from 2.8% in November. Locally, inflation in South Africa declined for the second consecutive month, with the consumer price index increasing by 5.1% in December compared to the previous year, down from 5.5% the month prior. This marks the lowest level since August 2023.

In the United States, the shelter component represents approximately one-third of the CPI calculation and currently significantly influences the elevated inflation levels. This component comprises four sub-components: Rent, owners' equivalent rent, lodging away from home, and household insurance. Owners' Equivalent Rent, which indirectly reflects home price growth, constitutes the largest portion, making up 73.8% of the shelter component calculation and typically lags behind US House Prices by approximately 12-18 months. Since US housing seems to have peaked over the past year, it is anticipated that Owners' Equivalent Rent will continue to moderate in the upcoming months, contributing to a further easing of inflation towards the Fed's target of 2%.

A significant shift is occurring in global markets as investors withdraw billions of dollars from China's slowing economy, marking a departure from the previous two decades when the country was seen as the world's premier growth story. It's fair to say that much of this capital is now being redirected towards India. The diverging paths of two of Asia's leading economies is evident. India, boasting the title of the world's fastest-growing major economy, has undergone substantial infrastructure development under Prime Minister Narendra Modi's leadership, aimed at attracting global capital and diversifying supply chains away from Beijing. Meanwhile, China is grappling with persistent economic challenges and facing a widening divide with the Western-led global order. In mid-January, India briefly overtook Hong Kong, emerging as the world's fourth-largest equity market.

Global equities began the year mixed, with major regions such as the US ending the month more than 1% higher, while in Europe, Germany's DAX and France's CAC saw gains, but the UK's FTSE 100 Index fell. Japan's Nikkei continued its strong performance, surging over 8% in January and marking a 41% rally since the beginning of 2023. The MSCI World Total Return index gained 1.2%. However, emerging market equities faced challenges due to concerns about China's economy, leading to a -4.6% decline in the MSCI Emerging Market index. Locally, the All Share Total Return Index lost -3%, while listed property gained 4.1%. Nominal Bonds gained +0.7%, Money market +0.74% and Inflation Linked Bonds were flat.

Contributors to performance:

Local property and nominal bonds contributed to performance.

Detractors from performance:

Local and emerging market equity detracted from performance.

PRESCIENT DEFENSIVE FUND (A2)

GLOSSARY

Annualised performance: Annualised performance shows longer term performance rescaled to a 1 year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request.

Highest & Lowest performance: The highest and lowest performance for any 1 year over the period since inception have been shown.

NAV: The net asset value represents the assets of a Fund less its liabilities.

Current Yield: Annual income (interest or dividends) divided by the current price of the security.

CPU: Cents Per Unit to the Glossary

Alpha: Denotes the outperformance of the fund over the benchmark.

Sharpe Ratio: The Sharpe ratio is used to indicate the excess return the portfolio delivers over the risk free rate per unit of risk adopted by the fund.

Standard Deviation: The deviation of the return stream relative to its own average.

Max Drawdown: The maximum peak to trough loss suffered by the Fund since inception.

% Positive Month: The percentage of months since inception where the Fund has delivered positive return.

Fund Specific Risks

Default Risk: The risk that the issuers of fixed income instruments may not be able to meet interest payments nor repay the money they have borrowed. The issuers credit quality is vital. The worse the credit quality, the greater the risk of default and therefore investment loss.

Derivatives risk: The use of derivatives could increase overall risk by magnifying the effect of both gains and losses in a Fund. As such, large changes in value and potentially large financial losses could result.

Developing Market (excluding SA) risk: Some of the countries invested in may have less developed legal, political, economic and/or other systems. These markets carry a higher risk of financial loss than those in countries generally regarded as being more developed.

Foreign Investment risk: Foreign securities investments may be subject to risks pertaining to overseas jurisdictions and markets, including (but not limited to) local liquidity, macroeconomic, political, tax, settlement risks and currency fluctuations.

Interest rate risk: The value of fixed income investments (e.g. bonds) tends to be inversely related to interest and inflation rates. Hence their value decreases when interest rates and/or inflation rises.

% Property risk: Investments in real estate securities can carry the same risks as investing directly in real estate itself. Real estate prices move in response to a variety of factors, including local, regional and national economic and political conditions, interest rates and tax considerations.

Currency exchange risk: Changes in the relative values of individual currencies may adversely affect the value of investments and any related income.

Geographic / Sector risk: For investments primarily concentrated in specific countries, geographical regions and/or industry sectors, their resulting value may decrease whilst portfolios more broadly invested might grow.

Derivative counterparty risk: A counterparty to a derivative transaction may experience a breakdown in meeting its obligations thereby leading to financial loss.

Liquidity risk: If there are insufficient buyers or sellers of particular investments, the result may lead to delays in trading and being able to make settlements, and/or large fluctuations in value. This may lead to larger financial losses than expected.

Equity investment risk: Value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects as well as more general market factors. In the event of a company default (e.g. bankruptcy), the owners of their equity rank last in terms of any financial payment from that company.

Information Disclosure

The portfolio has adhered to its policy objective and there were no material changes to the composition of the portfolio during the quarter.

PRESCIENT DEFENSIVE FUND (A2)

DISCLAIMER

Collective Investment Schemes in Securities (CIS) should be considered as medium to long-term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate. CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TERs. During the phase in period TERs do not include information gathered over a full year. Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction cost is a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

Where a current yield has been included for Funds that derive its income primarily from interest bearing income, the yield is a weighted average yield of all underlying interest bearing instruments as at the last day of the month. This yield is subject to change as market rates and underlying investments change.

The Manager retains full legal responsibility for any third-party-named portfolio. Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macroeconomic risks, political risks, foreign exchange risks, tax risks, settlement risks; and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient by or before 13:00 (SA), to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut-off time, Prescient shall not be obliged to transact at the net asset value price as agreed to. Funds are priced at either 3pm or 5pm depending on the nature of the Fund. Prices are published daily and are available on the Prescient website.

Performance has been calculated using net NAV to NAV numbers, including actual initial and all ongoing fees, with income reinvested on the reinvestment date. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request.

This portfolio operates as a white label fund under the Prescient Unit Trust Scheme, which is governed by the Collective Investment Schemes Control Act.
