

Investment Objective

The objective of the Fairtree Flexible Balanced Prescient Fund is to create medium to long-term capital growth, within the constraints governing retirement funds - Regulation 28. To pursue its objective, the fund invests in a diversified and balanced range of asset classes. This is achieved through active asset allocation and blending together a collection of the best Fairtree strategies into a diversified portfolio. The portfolio will invest in offshore securities when the benefit of higher returns and portfolio diversification are available. The portfolio aims to provide returns above the benchmark while exhibiting a lower level of volatility in returns relative to the benchmark.

Investment Policy

The Fairtree Flexible Balanced Prescient Fund is a South African Multi Asset Medium Equity. The objective of the portfolio is to offer absolute returns in excess of the South African Multi Asset Medium Equity category average. This is achieved through active asset allocation and blending together a collection of the best Fairtree strategies into a diversified portfolio. While the fund invests predominately in domestic securities, a foreign exposure of up to 45% is allowed.

Since inception till 26 May 2020, class A1 was used as this was the most expensive fee class at the time of launch. The returns indicated above are a stitched performance history of A1 and A3.

MARKET COMMENTARY

Global equity markets pulled back in June despite a rapid improvement in sentiment following the ceasefire between Israel, the US and Iran. The MSCI World Index declined 0.7% (USD) over the month, while the MSCI Emerging Markets Index fell 1.4% (USD), with a firmer dollar eroding emerging market returns. Technology and semiconductor shares were the main source of weakness, as investors took profits and reassessed valuations after two years of exceptional gains, with the Nasdaq down 2.8% while the Dow Jones rose 2.5% to a record high. Uncertainty around the change in Federal Reserve leadership added a further layer of volatility. Despite the softer month, the S&P 500 still posted its strongest first half since 2021, and global equity performance has remained strong over the past year, with the MSCI World returning 21.8% and Emerging Markets 40.9%.

In the US, new Fed chair Kevin Warsh opened with a more hawkish tone than markets had expected, though he softened this stance as oil prices slumped and inflation risks eased, while continuing to stress a commitment to price stability. The Federal Reserve held rates unchanged at 3.50%-3.75% in a unanimous vote, though updated projections showed nine officials expecting a further hike by year-end. First-quarter GDP was revised up to an annualised 2.1% from 1.6%, while headline inflation accelerated for a third consecutive month to 4.2% y/y in May (from 3.8%), the highest since April 2023, largely on higher energy costs. Core inflation edged up to 2.9% from 2.8%, and unemployment held at 4.3%. US equities were mixed as a rotation out of technology gathered pace, with the S&P 500 down 1.0% and the Nasdaq down 2.8%, while the Dow Jones advanced 2.5% to a record high.

European equities advanced, with the STOXX All Europe Index up 2.3% (EUR), as the region's lighter technology exposure cushioned it from the global sell-off. Euro-area inflation rose to 3.2% y/y in May (from 3.0%), the highest since September 2023, driven by a 10.9% increase in energy prices, while core inflation climbed to 2.6% from 2.2%. The ECB raised its three key rates by 25 basis points, taking the deposit rate to 2.25%, citing inflation pressure from the Middle East conflict, and lifted its inflation forecasts to 3.0% for 2026 before easing back to target by 2028. It also trimmed its 2026 growth forecast to 0.8%.

South African markets underperformed global peers. The FTSE/JSE All Share Index fell 3.7%, and the Top 40 declined 4.5%, driven almost entirely by a rout in mining shares, with Impala Platinum, Sibanye-Stillwater and Northam Platinum all down more than 25% and gold counters AngloGold and Gold Fields also sharply lower as gold posted its second-worst month since 2008. The All-Bond Index was the standout performer, returning 1.5%, while listed property gained 3.7%. MSCI South Africa fell 6.8% (USD), underperforming both MSCI Emerging Markets (-1.4%) and MSCI World (-0.7%). On the macro front, first-quarter GDP surprised to the upside at 0.5% q/q (against 0.3% expected), while headline inflation rose less than expected to 4.5% y/y in May (from 4.0%, consensus 4.7%), helped by a surprise decline in public transport costs. The rand weakened 1.2% to R16.39/USD as broad dollar strength and lower precious metals prices weighed on sentiment, while the 10-year bond yield fell 13bps to 8.42%.

China's CSI 300 rose 2.3% (CNY), and the Shanghai Composite gained 0.6% (CNY), but the MSCI China Index fell 7.1% (USD) as the technology sell-off hit Hong Kong, where the Hang Seng dropped 9.1% (HKD). The official manufacturing PMI edged up to 50.3 (from 50.0), remaining in expansionary territory, while inflation held at 1.2% y/y in May. The People's Bank of China kept its policy accommodative to support the recovery.

Brent crude tumbled 19.9% to end near \$73/barrel as the US-Iran ceasefire eased the four-month oil shock and tankers resumed transit through the Strait of Hormuz. Precious metals sold off sharply as geopolitical risk premiums unwound, with gold down 11.7% to \$4,008/oz, platinum down 19.2% and silver down 22.2%. The US dollar firmed on safe-haven demand, and the rand weakened 1.2% against the dollar to R16.39, though it remains roughly 1.1% stronger for the year to date.

Fairtree Flexible Balanced Prescient Fund

Minimum Disclosure Document & General Investor Report - Class A3

30 June 2026

Glossary

Annualised Performance: Annualised performance shows longer term performance rescaled to a 1 year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request.

Highest & Lowest Performance: The highest and lowest performance for any 1 year over the period since inception have been shown.

NAV: The net asset value represents the assets of a Fund less its liabilities.

Current Yield: Annual income (interest or dividends) divided by the current price of the security.

Alpha: Denotes the outperformance of the fund over the benchmark.

Sharpe Ratio: The Sharpe ratio is used to indicate the excess return the portfolio delivers over the risk free rate per unit of risk adopted by the fund.

Sortino Ratio: A measure of the risk-adjusted return of a portfolio. It is a modification of the Sharpe ratio but only penalises the returns falling below a user specified target, or required rate of return, while the Sharpe ratio penalises both upside and downside volatility equally.

Standard Deviation: The deviation of the return stream relative to its own average.

Max Drawdown: The maximum peak to trough loss suffered by the Fund since inception.

Max Gain: Largest increase in any single month.

% Positive Month: The percentage of months since inception where the Fund has delivered positive return.

High Water Mark: The highest level of performance achieved over a specified period.

Total Expense Ratio (TER%): The Total Expense Ratio (TER) is the percentage of the net asset value of the class of the Financial Product incurred as expenses relating to the administration of the Financial Product.

Performance fee incl. in TER (%) PF (%): The Performance Fee is a payment made to the Fund Manager for generating outperformance and is generally calculated as percentage of outperformance, often both realized and unrealized.

Transaction Costs (TC%): The Transaction Costs (TC) is the percentage of the net asset value of the Financial Product incurred as costs relating to the buying and selling of the assets underlying the Financial Product.

Total Investment Charges TIC (%) = TER (%) + TC (%): The Total Investment Charges (TIC), the TER + the TC, is the percentage of the net asset value of the class of the Financial Product incurred as costs relating to the investment of the Financial Product. It should be noted that a TIC is the sum of two calculated ratios (TER+TC).

Specific Risk

Default Risk: The risk that the issuers of fixed income instruments may not be able to meet interest payments nor repay the money they have borrowed. The issuers credit quality is vital. The worse the credit quality, the greater the risk of default and therefore investment loss.

Derivatives Risk: The use of derivatives could increase overall risk by magnifying the effect of both gains and losses in a Fund. As such, large changes in value and potentially large financial losses could result.

Developing Market (excluding SA) Risk: Some of the countries invested in may have less developed legal, political, economic and/or other systems. These markets carry a higher risk of financial loss than those in countries generally regarded as being more developed.

Foreign Investment Risk: Foreign securities investments may be subject to risks pertaining to overseas jurisdictions and markets, including (but not limited to) local liquidity, macroeconomic, political, tax, settlement risks and currency fluctuations.

Interest Rate Risk: The value of fixed income investments (e.g. bonds) tends to be inversely related to interest and inflation rates. Hence their value decreases when interest rates and/or inflation rises.

% Property Risk: Investments in real estate securities can carry the same risks as investing directly in real estate itself. Real estate prices move in response to a variety of factors, including local, regional and national economic and political conditions, interest rates and tax considerations.

Currency Exchange Risk: Changes in the relative values of individual currencies may adversely affect the value of investments and any related income.

Geographic / Sector Risk: For investments primarily concentrated in specific countries, geographical regions and/or industry sectors, their resulting value may decrease whilst portfolios more broadly invested might grow.

Derivative Counterparty Risk: A counterparty to a derivative transaction may experience a breakdown in meeting its obligations thereby leading to financial loss.

Liquidity Risk: If there are insufficient buyers or sellers of particular investments, the result may lead to delays in trading and being able to make settlements, and/or large fluctuations in value. This may lead to larger financial losses than expected.

Equity Investment Risk: Value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects as well as more general market factors. In the event of a company default (e.g. bankruptcy), the owners of their equity rank last in terms of any financial payment from that company.

Disclosure

The portfolio has adhered to its object and there were no material changes to the composition of the portfolio during the quarter.

Risk Indicator Definition

The Portfolio is diversified across asset classes, although the portfolio's volatility may be dominated by the equities and fixed income portions. The equity portions is concentrated which comes with the risk of more volatile returns relative to the broader market when the stocks invested in underperform. The fixed income exposure may cause permanent capital loss for investors if an issuer of one of the instruments held in the fund defaults. Significant widening in credit spreads on instruments held in the fund can result in short term capital volatility but not permanent capital loss. This portfolio is permitted to invest in foreign securities which, within portfolios, may have additional material risks, depending on the specific risks affecting that country, such as: potential constraints on liquidity and the repatriation of funds; macroeconomic risks; political risks; foreign exchange risks; tax risks; settlement risks; and potential limitations on the availability of the market information. Fluctuations or movements in exchange rates may cause the value of underlying international investments to go up or down. Investors are reminded that an investment in a currency other than their own may expose them to a foreign exchange risk.

Disclaimer

Collective Investment Schemes in Securities (CIS) should be considered as medium to long term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate.

CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's. During the phase in period TER's do not include information gathered over a full year. Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

The Manager retains full legal responsibility for any third party named portfolio. Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macro economic risks, political risks, foreign exchange risks, tax risks, settlement risks; and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient by or before 13:00 (SA), to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut off time Prescient shall not be obliged to transact at the net asset value price as agreed to. Funds are priced at either 3pm or 5pm depending on the nature of the Fund. Prices are published daily and are available on the Prescient website. This portfolio operates as a white label fund under the Prescient Unit Trust Scheme, which is governed by the Collective Investment Schemes Control Act. Performance has been calculated using net NAV to NAV numbers with income reinvested. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request. For any additional information such as fund prices, brochures and application forms please go to www.fairtree.com
