

Investment Objective

The Fairtree SA Balanced Prescient Fund is a South African multi-asset high equity fund, with a focus on maximising total returns in excess of the benchmark, after fees, over the long term. It is designed for investors seeking local-only exposure in line with Regulation 28 of the Pension Funds Act.

Investment Policy

The Fairtree SA Balanced Prescient Fund is a multi-asset South African high equity fund. The objective of the portfolio is to generate long-term wealth for investors by producing inflation beating returns. The portfolio will invest in a diversified range of local asset classes as permitted by legislation. The portfolio will seek to deliver consistent returns over the medium to long term by blending maximum equity exposure with other asset classes. The portfolio will invest primarily in South African equities, fixed income, money markets, instruments based on the value of any precious metal, and property. The portfolio is not permitted to invest offshore. The portfolio will aim to deliver returns in excess of the benchmark. This will be obtained by following a disciplined and methodological investment process of selecting the most appropriate asset allocation for the market environment and then selecting the securities which will maximise the probability of outperforming the benchmark.

MARKET COMMENTARY

Global equity markets diverged in July as investors rotated out of the artificial-intelligence trade and the Middle East ceasefire collapsed. US semiconductors suffered their worst month since the Global Financial Crisis on doubts over AI valuations and capex funding, dragging the Nasdaq 100 down 5.1% while the S&P 500 was flat at 0.2% and the Dow added 0.4%. Value- and energy-heavy markets outperformed, with the UK and Europe advancing and energy the strongest sector as Brent rose roughly 23%. The unwind hit Asian technology hardest, with South Korea down around 23%, leaving the MSCI Emerging Markets Index off 6.6% (USD). Central banks held rates almost everywhere, but dissent grew, and long-dated yields rose.

US equities were mixed as Middle East tensions and higher oil prices offset resilient earnings. The S&P 500 ended flat, and the Dow gained 0.4%, but the Nasdaq 100 fell 5.1% on the semiconductor rout. Earnings reinforced a selective AI trade: Microsoft and Amazon rallied on strong cloud growth, while Meta, Alphabet and Apple lagged on rising AI costs and capex. June CPI eased to 3.5% y/y from 4.2% with core at 2.6%, but predated July's oil surge, which lifted inflation expectations. The FOMC held at 3.50%-3.75%, with three of twelve members dissenting for a 25bp hike, and Chair Warsh provided little forward guidance. The curve steepened, with the 30-year yield reaching a post-2007 high of 5.28%, and markets ended the month pricing a meaningful chance of a September increase.

European equities were among the few to advance, the Euro STOXX 50 up 1.3%, supported by energy and defence shares after Houthi threats disrupted Red Sea shipping. Second-quarter GDP expanded 0.4% q/q, double consensus, while inflation accelerated to 2.9% in July. The ECB held its deposit rate at 2.25% on 23 July but signalled further tightening remained likely, with markets ending the month pricing two more hikes by early 2027. Sovereign yields hit fresh multi-year highs on the oil-driven inflation scare, the 10-year Bund reaching a post-2011 high of 3.21% and the French 10-year ending near 4.0%.

South African equities outperformed a falling global benchmark, with the All-Share Index up 1.2% and the Top 40 up 1.4% as the market's commodity weighting worked in its favour; resources led (Resource 10 up 2.2%) and property climbed 2.3%, while domestic retailers lagged. June inflation accelerated to a two-year high of 5.0% y/y, driven by a 34.3% jump in fuel prices, with core at 4.1%. The SARB surprised by holding the repo rate at 7.0% on 23 July (four to hold, two for a hike), warning inflation would stay above 4% into early next year. The rand weakened towards R17.0/USD intramonth before ending near R16.5 (down 0.9%), and the curve bear-steepened, with the 10-year rising to about 8.7% and the ALBI returning -1.4%.

China equities were resilient but bifurcated, with Hong Kong outperforming the mainland and the MSCI China All Shares Index returning 1.5% (USD). Mainland shares bore the brunt of the global AI unwind, while the official manufacturing and non-manufacturing PMIs both slipped back into contraction and the property sector stayed constrained. Hong Kong outperformed on China-specific catalysts, chief among them the regulatory approval of Apple Intelligence, to run on Alibaba's Qwen and Baidu's technology, which lifted Alibaba, Tencent and Meituan.

Commodity markets were dominated by the return of the energy shock. Brent rose roughly 23% to end July near \$90/bbl, its strongest month since March, after briefly trading above \$100 mid-month as the US-Iran pause collapsed and a blockade threatened the Strait of Hormuz. Gold rose about 1% to roughly \$4,050/oz, its first monthly gain in five, holding above \$4,000 despite a firmer dollar. Platinum extended its recovery, up 3.7% to about \$1,659/oz and supporting SA producers, while copper gained roughly 5% to \$6.4/lb on falling inventories and electrification demand.

Glossary

Annualised Performance: Annualised performance shows longer term performance rescaled to a 1 year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request.

Highest & Lowest Performance: The highest and lowest performance for any 1 year over the period since inception have been shown.

NAV: The net asset value represents the assets of a Fund less its liabilities.

Current Yield: Annual income (interest or dividends) divided by the current price of the security.

Alpha: Denotes the outperformance of the fund over the benchmark.

Sharpe Ratio: The Sharpe ratio is used to indicate the excess return the portfolio delivers over the risk free rate per unit of risk adopted by the fund.

Sortino Ratio: A measure of the risk-adjusted return of a portfolio. It is a modification of the Sharpe ratio but only penalises the returns falling below a user specified target, or required rate of return, while the Sharpe ratio penalises both upside and downside volatility equally.

Standard Deviation: The deviation of the return stream relative to its own average.

Max Drawdown: The maximum peak to trough loss suffered by the Fund since inception.

Max Gain: Largest increase in any single month.

% Positive Month: The percentage of months since inception where the Fund has delivered positive return.

High Water Mark: The highest level of performance achieved over a specified period.

Performance Fee Cap: The maximum performance fee that can be charged over a specified period

Total Expense Ratio (TER%): The Total Expense Ratio (TER) is the percentage of the net asset value of the class of the Financial Product incurred as expenses relating to the administration of the Financial Product.

Performance fee incl. in TER (%) PF (%): The Performance Fee is a payment made to the Fund Manager for generating outperformance and is generally calculated as percentage of outperformance, often both realized and unrealized.

Transaction Costs (TC%): The Transaction Costs (TC) is the percentage of the net asset value of the Financial Product incurred as costs relating to the buying and selling of the assets underlying the Financial Product.

Total Investment Charges TIC (%) = TER (%) + TC (%): The Total Investment Charges (TIC), the TER + the TC, is the percentage of the net asset value of the class of the Financial Product incurred as costs relating to the investment of the Financial Product. It should be noted that a TIC is the sum of two calculated ratios (TER+TC).

Specific Risk

Default Risk: The risk that the issuers of fixed income instruments may not be able to meet interest payments nor repay the money they have borrowed. The issuers credit quality is vital. The worse the credit quality, the greater the risk of default and therefore investment loss.

Derivatives Risk: The use of derivatives could increase overall risk by magnifying the effect of both gains and losses in a Fund. As such, large changes in value and potentially large financial losses could result.

Developing Market (excluding SA) Risk: Some of the countries invested in may have less developed legal, political, economic and/or other systems. These markets carry a higher risk of financial loss than those in countries generally regarded as being more developed.

Foreign Investment Risk: Foreign securities investments may be subject to risks pertaining to overseas jurisdictions and markets, including (but not limited to) local liquidity, macroeconomic, political, tax, settlement risks and currency fluctuations.

Interest Rate Risk: The value of fixed income investments (e.g. bonds) tends to be inversely related to interest and inflation rates. Hence their value decreases when interest rates and/or inflation rises.

% Property Risk: Investments in real estate securities can carry the same risks as investing directly in real estate itself. Real estate prices move in response to a variety of factors, including local, regional and national economic and political conditions, interest rates and tax considerations.

Currency Exchange Risk: Changes in the relative values of individual currencies may adversely affect the value of investments and any related income.

Geographic / Sector Risk: For investments primarily concentrated in specific countries, geographical regions and/or industry sectors, their resulting value may decrease whilst portfolios more broadly invested might grow.

Derivative Counterparty Risk: A counterparty to a derivative transaction may experience a breakdown in meeting its obligations thereby leading to financial loss.

Liquidity Risk: If there are insufficient buyers or sellers of particular investments, the result may lead to delays in trading and being able to make settlements, and/or large fluctuations in value. This may lead to larger financial losses than expected.

Equity Investment Risk: Value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects as well as more general market factors. In the event of a company default (e.g. bankruptcy), the owners of their equity rank last in terms of any financial payment from that company.

Disclosure

The portfolio has adhered to its object and there were no material changes to the composition of the portfolio during the quarter.

Risk Indicator Definition

The Portfolio is diversified across asset classes, although the portfolio's volatility may be dominated by the equities and fixed income portions. The equity portions is concentrated which comes with the risk of more volatile returns relative to the broader market when the stocks invested in underperform. The fixed income exposure may cause permanent capital loss for investors if an issuer of one of the instruments held in the fund defaults. Significant widening in credit spreads on instruments held in the fund can result in short term capital volatility but not permanent capital loss. This portfolio is permitted to invest in foreign securities which, within portfolios, may have additional material risks, depending on the specific risks affecting that country, such as: potential constraints on liquidity and the repatriation of funds; macroeconomic risks; political risks; foreign exchange risks; tax risks; settlement risks; and potential limitations on the availability of the market information. Fluctuations or movements in exchange rates may cause the value of underlying international investments to go up or down. Investors are reminded that an investment in a currency other than their own may expose them to a foreign exchange risk.

Disclaimer

Collective Investment Schemes in Securities (CIS) should be considered as medium to long-term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate.

CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's. During the phase in period TER's do not include information gathered over a full year. Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

The Manager retains full legal responsibility for any third-party-named portfolio. Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macro-economic risks, political risks, foreign exchange risks, tax risks, settlement risks; and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient by or before 13:00 (SA), to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut off time Prescient shall not be obliged to transact at the net asset value price as agreed to. Funds are priced at either 3pm or 5pm depending on the nature of the Fund. Prices are published daily and are available on the Prescient website.

This portfolio operates as a white label fund under the Prescient Unit Trust Scheme, which is governed by the Collective Investment Schemes Control Act.

Performance has been calculated using net NAV to NAV numbers with income reinvested. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request.
