INVESTMENT STRATEGY

The Fund will carefully select investments and has free choice to select companies from any country/region, sector or industry.

The Fund seeks to identify the long-term investment themes that drive growth and lead to disruption in global economies and industries, and will shape the world in which we live and invest. The Fund will select companies based on analysis of which are most likely to benefit from our themes, and are well placed to grow their revenues and cash flows as a result of them. The Fund will choose global themes which track long-term worldwide growth trends (rather than those relevant only to particular regions or markets).

RISK PROFILE

The Risk and Reward Indicator table demonstrates where the Fund ranks in terms of its potential risk and return. It is based upon how the Fund has performed in the past and you should note that the Fund may well perform differently in the future. The risk category shown is not guaranteed and may shift over time. The higher the rank the greater the potential reward but the greater the risk of losing money. The Fund is ranked at 5 reflecting observed historical returns. The fund is in this category because it has shown higher levels of volatility historically.

Derivatives risk: The use of derivatives could increase overall risk by magnifying the effect of both gains and losses in a Fund. As such, large changes in value and potentially large financial losses could result

Foreign Investment risk: Foreign securities investments may be subject to risks pertaining to overseas jurisdictions and markets, including (but not limited to) local liquidity, macroeconomic, political, tax, settlement risks and currency fluctuations.

Currency exchange risk: Changes in the relative values of individual currencies may adversely affect the value of investments and any related income.

Liquidity risk: If there are insufficient buyers or sellers of particular investments, the result may lead to delays in trading and being able to make settlements, and/or large fluctuations in value. This may lead to larger financial losses than expected.

Equity investment risk: Value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects as well as more general market factors. In the event of a company default (e.g. bankruptcy), the owners of their equity rank last in terms of any financial payment from that company.
