

# PRESCIENT DEFENSIVE FUND (A1)

## MINIMUM DISCLOSURE DOCUMENT

### INVESTMENT AND RETURN OBJECTIVE

The Fund aims to achieve healthy real returns over the long term and to outperform the ASISA category average of the South African - Multi-Asset - Low Equity funds over a full market cycle by maintaining moderate exposure to growth assets like equities.

### INVESTMENT PROCESS

This Fund invests in local and offshore money market, bonds and inflation-linked bonds, property, preference and ordinary shares, derivatives and unlisted instruments to meet the investment objectives. Fund performance can be generated from taking interest rate views or duration, yield enhancement via credit instruments, asset allocation and exposure equities.

### WHO SHOULD INVEST

Investors seeking real returns coupled with a stable and attractive income yield via significant exposure to the South African interest bearing markets. Although the Fund's mandate allows investment up to 40% in equities, it is expected to have lower actual exposure on average. This Fund is suitable to investors with a medium to long-term investment horizon and is Regulation 28 compliant.

### RISK INDICATOR DEFINITION

These portfolios typically have moderate equity exposure or in the case of bond funds, longer duration bond exposure, resulting in some capital volatility over the shorter term. They are managed in such a manner that the probability of capital losses over one year periods is unlikely. These portfolios typically target returns in the region of 3% - 4% above inflation over the long term.

## RISK INDICATOR

## FUND COMMENTARY

April saw the initiation of the Trump Administrations tariff regime and the initial decision to impose significant tariffs on a range of countries contributed to a notable decline in global financial markets, with most equity and bond markets selling off aggressively in the first half of the month.

Trump justifies these tariffs as a response to trade barriers against U.S. goods, and they are intended to support U.S. manufacturing jobs and open new export markets for American businesses. However, economists have raised concerns that these tariffs could lead to rising inflation, increase the risk of a U.S. recession, and raise costs for American consumers. Furthermore, these measures could strain relations with key allies in Asia and hinder efforts to counterbalance China's growing economic influence. Chinas response to these tariffs was the imposition of its own counter-tariffs which quickly escalated to the United States imposing a 145% tariff charge on China on certain products.

The response from most other countries was to contact the US administration to negotiate terms of trade, a response so widespread that the Trump administration decided to pause initial higher tariffs and set them at an initial 10% baseline for the next 3 months, while negotiations start. This news set both equity and bond markets onto the path of recovery with some of the largest positive one day moves in the past decade.

Locally, the proposed 0.5% Vat hike was cancelled after significant negotiations and last-minute court proceedings. Finance Minister Enoch Godongwana issued a warning that suspending the planned 0.5% VAT increase could have severe consequences for South Africa's economy. The National Treasury announced the decision to suspend the VAT increase would result in an estimated R75 billion revenue shortfall over the medium term. To address this shortfall, Godongwana has proposed adjustments to government expenditure which will likely affect service delivery.

On a more positive note, South Africa's headline inflation rate is currently at its lowest level since June 2020. This decrease in inflation suggests the possibility of further interest rate cuts by the SARB. Both headline and core inflation are now below the midpoint of the central bank's target range, which could justify a 25-basis point rate cut soon. This presents a potential opportunity for the SARB to further stimulate the economy by lowering borrowing costs.

Both the Dow Jones Industrial Average and S&P 500 recorded negative returns of -3.17% and -0.76%, respectively. Meanwhile, the Nasdaq ended the month with a modest return of 0.85%. The economies of China and Hong Kong were also impacted, with the Shanghai SE Composite falling by -1.70% and the Hang Seng Composite Index dropping -3.70%. The MSCI World Index gained 0.74%, while the MSCI Emerging Markets Index rose by 1.04%, indicating that emerging markets showed greater resilience to the adverse market reaction triggered by the tariffs.

On a local level, the tariffs have had a notable impact on the Johannesburg Stock Exchange (JSE), with South African banks among the hardest hit by the global market sell-off. However, these losses were largely recovered by the end of April with the index having gained +4.34% by month end. The South African bond market also saw positive performance, with the FTSE/JSE ALBI Total Return Index increasing by 0.19% and the FTSE/JSE CILI Total Return Index gaining 0.03%.

The Fund currently holds a moderately negative view towards developed and emerging market equities markets, and a positive view on South African bonds, equity and the South Africa Rand strength.

The Fund was positive for the month largely due to good contributions from bonds and fixed interest.

## GLOSSARY

**Annualised performance:** Annualised performance shows longer term performance rescaled to a 1 year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request.

**Highest & Lowest performance:** The highest and lowest performance for any 1 year over the period since inception have been shown.

**NAV:** The net asset value represents the assets of a Fund less its liabilities.

**Current Yield:** Annual income (interest or dividends) divided by the current price of the security.

**CPU:** Cents Per Unit to the Glossary

**Sharpe Ratio:** The Sharpe ratio is used to indicate the excess return the portfolio delivers over the risk free rate per unit of risk adopted by the fund.

**Max Drawdown:** The maximum peak to trough loss suffered by the Fund since inception.

**% Positive Month:** The percentage of months since inception where the Fund has delivered positive return.

## Fund Specific Risks

**Default Risk:** The risk that the issuers of fixed income instruments may not be able to meet interest payments nor repay the money they have borrowed. The issuers credit quality is vital. The worse the credit quality, the greater the risk of default and therefore investment loss.

**Derivatives risk:** The use of derivatives could increase overall risk by magnifying the effect of both gains and losses in a Fund. As such, large changes in value and potentially large financial losses could result.

**Developing Market (excluding SA) risk:** Some of the countries invested in may have less developed legal, political, economic and/or other systems. These markets carry a higher risk of financial loss than those in countries generally regarded as being more developed.

**Foreign Investment risk:** Foreign securities investments may be subject to risks pertaining to overseas jurisdictions and markets, including (but not limited to) local liquidity, macroeconomic, political, tax, settlement risks and currency fluctuations.

**Interest rate risk:** The value of fixed income investments (e.g. bonds) tends to be inversely related to interest and inflation rates. Hence their value decreases when interest rates and/or inflation rises.

**% Property risk:** Investments in real estate securities can carry the same risks as investing directly in real estate itself. Real estate prices move in response to a variety of factors, including local, regional and national economic and political conditions, interest rates and tax considerations.

**Currency exchange risk:** Changes in the relative values of individual currencies may adversely affect the value of investments and any related income.

**Geographic / Sector risk:** For investments primarily concentrated in specific countries, geographical regions and/or industry sectors, their resulting value may decrease whilst portfolios more broadly invested might grow.

**Derivative counterparty risk:** A counterparty to a derivative transaction may experience a breakdown in meeting its obligations thereby leading to financial loss.

**Liquidity risk:** If there are insufficient buyers or sellers of particular investments, the result may lead to delays in trading and being able to make settlements, and/or large fluctuations in value. This may lead to larger financial losses than expected.

**Equity investment risk:** Value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects as well as more general market factors. In the event of a company default (e.g. bankruptcy), the owners of their equity rank last in terms of any financial payment from that company.

## Information Disclosure

The portfolio has adhered to its policy objective and there were no material changes to the composition of the portfolio during the quarter.

## DISCLAIMER

Collective Investment Schemes in Securities (CIS) should be considered as medium to long-term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate. CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TERs. During the phase in period TERs do not include information gathered over a full year. Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction cost is a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

Where a current yield has been included for Funds that derive its income primarily from interest bearing income, the yield is a weighted average yield of all underlying interest bearing instruments as at the last day of the month. This yield is subject to change as market rates and underlying investments change.

The Manager retains full legal responsibility for any third-party-named portfolio. Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macroeconomic risks, political risks, foreign exchange risks, tax risks, settlement risks; and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient by or before 11:00 (SA) for money market funds and the Prescient Optimised Income Fund and by or before 13:00 for all other funds, to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut-off time, Prescient shall not be obliged to transact at the net asset value price as agreed to. Funds are priced at either 3pm or 5pm depending on the nature of the Fund. Prices are published daily and are available on the Prescient website.

Performance has been calculated using net NAV to NAV numbers, including actual initial and all ongoing fees, with income reinvested on the reinvestment date. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request.

This portfolio operates as a white label fund under the Prescient Unit Trust Scheme, which is governed by the Collective Investment Schemes Control Act.
