

Investment objective

The Adviceworx High Income Prescient Fund of Funds aims to deliver a higher level of income than a money market fund, with lower volatility than a traditional bond fund.

Investment policy

The fund aims to provide investors with a steady, reliable income stream while preserving capital over the short term. The objective is to deliver returns modestly above cash with low levels of volatility.

The fund follows a multi-manager approach aimed at enhancing yield while carefully managing interest rate, credit and liquidity risks through select collective investment schemes and exchange-traded funds. The investment universe will consist of cash, bonds (including nominal and inflation linked), preference shares, corporate credit and property.

Risk profile: Cautious

Investors should have a short-term investment horizon of at least one year and be comfortable with low levels of market volatility. Key risks include interest rate movements, credit risk, inflation risk and liquidity risk.

Investor suitability

The fund is suitable for cautious investors looking for a stable and reliable income stream while preserving capital over the short term. It is appropriate for investors who are prepared to accept low levels of risk in pursuit of returns that exceed those typically available from traditional money market investments.

Domestic market commentary

South Africa’s macro-economic backdrop remains relatively resilient despite a more challenging global environment characterised by rising bond yields, persistent inflation concerns and growing fiscal pressures in developed markets. Unlike many advanced economies, South Africa has continued to make gradual progress in stabilising its debt burden, supported by disciplined government spending and robust tax revenue collections. Elevated gold and platinum prices have boosted mining profitability. This has strengthened fiscal revenues and helped offset some of the pressures arising from higher imported fuel costs.

The country’s external position has also remained favourable, with a trade surplus of R130 billion recorded during the first seven months of the year, reflecting strong export earnings from precious metals that have more than compensated for increased oil import costs.

These favourable trade dynamics have supported the rand, which strengthened against major currencies over the past year and helped limit imported inflation. However, inflation risks remain. While headline consumer inflation eased to 4.3% in July, higher fuel prices and rising global food costs are expected to keep inflation above 4% for the remainder of the year.

Household spending power and business margins are therefore likely to remain under pressure. Although future base effects should become more supportive during next year, the South African Reserve Bank is expected to remain cautious given ongoing global inflation risks and uncertainty surrounding international interest rates.

South African markets delivered mixed but generally constructive outcomes in August. The FTSE/JSE All Share Index returned 4.6%, lifting the market back into positive territory for 2026 and taking the 12-month return to a robust 19.4%. The rally was driven primarily by the resources sector, which surged 26% as precious metal prices rebounded amid heightened global uncertainty. Despite the strong monthly performance, resources are up a more modest 11% year to date.

South African bonds proved resilient despite rising global yields and renewed concerns over inflation and fiscal sustainability in developed markets. The FTSE/JSE All Bond Index gained 0.7% in August, taking its 12-month return to an impressive 16%, well ahead of both inflation and cash returns, although its year-to-date return of 3.5% still trails cash.

Listed property weakened during the month, with the FTSE/JSE All Property Index declining 4.0%. Nevertheless, the sector remains up 18.5% over the past year, reflecting the strong recovery experienced in late 2025.

The rand strengthened by 2.6% against the US dollar, ending August at R16.14/USD. Supported by favourable trade dynamics and a resilient external balance, the currency is 9% stronger over the past year. While this has reduced offshore returns for South African investors, it has also helped contain imported inflation pressures.

## Specific Risk

**Default risk:** The risk that the issuers of fixed income instruments (e.g. bonds) may not be able to meet interest payments nor repay the money they have borrowed. The issuers credit quality is vital. The worse the credit quality, the greater the risk of default and therefore investment loss.

**Developing Market (excluding SA) risk:** Some of the countries invested in may have less developed legal, political, economic and/or other systems. These markets carry a higher risk of financial loss than those in countries generally regarded as being more developed.

**Foreign Investment risk:** Foreign securities investments may be subject to risks pertaining to overseas jurisdictions and markets, including (but not limited to) local liquidity, macroeconomic, political, tax, settlement risks and currency fluctuations.

**Interest rate risk:** The value of fixed income investments (e.g. bonds) tends to be inversely related to interest and inflation rates. Hence their value decreases when interest rates and/or inflation rises.

**Property risk:** Investments in real estate securities can carry the same risks as investing directly in real estate itself. Real estate prices move in response to a variety of factors, including local, regional and national economic and political conditions, interest rates and tax considerations.

**Currency exchange risk:** Changes in the relative values of individual currencies may adversely affect the value of investments and any related income.

**Geographic / Sector risk:** For investments primarily concentrated in specific countries, geographical regions and/or industry sectors, their resulting value may decrease whilst portfolios more broadly invested might grow.

**Liquidity risk:** If there are insufficient buyers or sellers of particular investments, the result may lead to delays in trading and being able to make settlements, and/or large fluctuations in value. This may lead to larger financial losses than expected.

**Equity investment risk:** Value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects as well as more general market factors. In the event of a company default (e.g. bankruptcy), the owners of their equity rank last in terms of any financial payment from that company.

## Glossary

**Annualised Performance:** Annualised performance shows longer term performance rescaled to a 1-year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request.

**Highest & Lowest performance:** The highest and lowest performance for any 1 year over the period since inception have been shown.

**NAV:** The net asset value represents the assets of a fund less its liabilities.

**Total Expense Ratio (TER%):** The Total Expense Ratio (TER) is the percentage of the net asset value of the class of the Financial Product incurred as expenses relating to the administration of the Financial Product.

**Transaction Costs (TC%):** The Transaction Costs (TC) is the percentage of the net asset value of the Financial Product incurred as costs relating to the buying and selling of the assets underlying the Financial Product.

**Total Investment Charges TIC (%) = TER (%) + TC (%):** The Total Investment Charges (TIC), the TER + the TC, is the percentage of the net asset value of the class of the Financial Product incurred as costs relating to the investment of the Financial Product. It should be noted that a TIC is the sum of two calculated ratios (TER+TC).

## Disclaimer

Collective Investment Schemes in Securities (CIS) should be considered as medium to long-term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate. CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's. During the phase in period TER's do not include information gathered over a full year. Transaction Costs (TC) is the percentage of the value of the fund incurred as costs relating to the buying and selling of the fund's underlying assets. Transaction costs are a necessary cost in administering the fund and impacts fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of fund, investment decisions of the investment manager and the TER.

A fund of funds is a portfolio that invests in portfolios of collective investment schemes, which levy their own charges, which could result in a higher fee structure for these portfolios. The Manager retains full legal responsibility for any third-party-named portfolio. Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macroeconomic risks, political risks, foreign exchange risks, tax risks, settlement risks; and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient by or before 13:00 (SA), to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut off time Prescient shall not be obliged to transact at the net asset value price as agreed to. Funds are priced at either 3pm or 5pm depending on the nature of the fund. Prices are published daily and are available on the Prescient website. This portfolio operates as a white label fund under the Prescient Unit Trust Scheme, which is governed by the Collective Investment Schemes Control Act. Performance has been calculated using net NAV to NAV numbers with income reinvested. Where a current yield has been included for funds that derive their income primarily from interest bearing income, the yield is a weighted average yield of all underlying interest-bearing instruments as at the last day of the month. This yield is subject to change as market rates and underlying investments change. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request. The portfolio has adhered to its policy objective. There were no material changes to the composition of the portfolio during the quarter.
