

PRESCIENT EQUITY FUND (A2)

MINIMUM DISCLOSURE DOCUMENT

INVESTMENT AND RETURN OBJECTIVE

The Fund aims to consistently achieve returns above the (ASISA) South African General Equity category over the medium to long term. The Fund is managed systematically to outperform the peer group average return whilst maintaining similar risk characteristics.

INVESTMENT PROCESS

The Fund uses quantitative techniques to dynamically construct a portfolio that is most representative of the general equity category average then employs uncorrelated return enhancement techniques combined with efficient and cost-effective portfolio construction methods to generate outperformance. Although the fund is always fully exposed to the equity market, the use of fixed interest portable alpha techniques to enhance returns can provide exposure to cash and money market instruments, which are uncorrelated and reliable sources of additional return.

WHO SHOULD INVEST

Investors seeking broad based exposure to the South African equity market with consistently above average returns. This Fund is appropriate for investors with a long-term investment horizon.

RISK INDICATOR DEFINITION

These portfolios typically hold meaningful equity and/or offshore exposure which may result in significant capital volatility over all periods. Due to their nature expected long term returns are higher than for the other risk categories.

RISK INDICATOR

FUND COMMENTARY

The first month of 2026 delivered broadly solid returns for equity investors, with meaningful diversification across regions and sectors. While the extension of year-end risk-on sentiment was evident, precious metals performed strongly in January, with gold reaching new all-time highs, underscoring persistent demand for defensive assets alongside the broader risk-on backdrop. The MSCI World Index closed the month up 2.24%, supported by stronger economic data, continued corporate resilience and a clear widening of market participation beyond US mega-cap leadership. Despite lingering macro uncertainty and episodic volatility, investors' focus remained firmly on improving earnings visibility and the prospect of more balanced global growth.

In the United States, equity gains were more modest but nonetheless positive. The S&P 500 Index returned 1.45% for the month, underpinned by firm activity data and healthy earnings momentum, even as investors reduced exposure to large-cap growth names in favour of regional and cyclically exposed stocks. Financials were among the top performers, supported by stabilising rate expectations and improving earnings visibility.

European markets outperformed many peers. The Euro Stoxx Index delivered a 4.04% return for the month, buoyed by resilience in cyclical sectors, encouraging economic data and positive earnings revisions. Continued moderation in inflation, alongside a backdrop of supportive monetary conditions, helped sustain risk appetite across the region.

Japan was a standout contributor to global performance, with the Nikkei 225 Index surging 7.22%, driven by domestic economic momentum, sustained foreign inflows and favourable currency dynamics.

Emerging market shares and commodities were among the strongest performers globally in January, reflecting investor confidence extending beyond traditional US-centric leadership. The MSCI Emerging Markets Index delivered a particularly strong 8.85% return for the month, materially outperforming more defensive corners of the market. Within emerging markets, China's CSI 300 Index finished up 2.18%, supported by targeted policy measures and improving investor sentiment.

On the domestic front, sector rotation was evident throughout the month. The FTSE/JSE All Share Index climbed 3.72%, underpinned by robust performances across resource and industrial exposures. Basic materials led all major sectors with a 12.68% return, reflecting continued strength in commodity demand and pricing. Yield-sensitive assets also found renewed interest, with financials rising 2.97% and the listed property sector returning just under 1.00%. In contrast, technology was the lone major segment to give back ground, declining 9.82% for the month as investors reassessed valuations following a period of concentrated growth leadership.

Currency dynamics were notable. The rand strengthened by 2.50% against the US dollar over January, supported by firmer commodity prices, improved global risk appetite and elevated carry in emerging market linked assets.

The top contributors to the Fund's performance for the month were Gold Fields Ltd (17.09%), Impala Platinum Holdings Ltd (20.61%) and Sibanye Stillwater Ltd (21.95%). Detractors included Naspers Ltd (-10.23%), Cie Financiere Richemont SA (-14.53%) and Prosus NV (-9.12%).

PRESCIENT EQUITY FUND (A2)

GLOSSARY

Annualised performance: Annualised performance shows longer term performance rescaled to a 1 year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request.

Highest & Lowest performance: The highest and lowest performance for any 1 year over the period since inception have been shown.

NAV: The net asset value represents the assets of a Fund less its liabilities.

Current Yield: Annual income (interest or dividends) divided by the current price of the security.

CPU: Cents Per Unit to the Glossary

Alpha: Denotes the outperformance of the fund over the benchmark.

Sharpe Ratio: The Sharpe ratio is used to indicate the excess return the portfolio delivers over the risk free rate per unit of risk adopted by the fund.

Standard Deviation: The deviation of the return stream relative to its own average.

Max Drawdown: The maximum peak to trough loss suffered by the Fund since inception.

Fund Specific Risks

Default Risk: The risk that the issuers of fixed income instruments may not be able to meet interest payments nor repay the money they have borrowed. The issuers credit quality is vital. The worse the credit quality, the greater the risk of default and therefore investment loss.

Derivatives risk: The use of derivatives could increase overall risk by magnifying the effect of both gains and losses in a Fund. As such, large changes in value and potentially large financial losses could result.

Interest rate risk: The value of fixed income investments (e.g. bonds) tends to be inversely related to interest and inflation rates. Hence their value decreases when interest rates and/or inflation rises.

% Property risk: Investments in real estate securities can carry the same risks as investing directly in real estate itself. Real estate prices move in response to a variety of factors, including local, regional and national economic and political conditions, interest rates and tax considerations.

Geographic / Sector risk: For investments primarily concentrated in specific countries, geographical regions and/or industry sectors, their resulting value may decrease whilst portfolios more broadly invested might grow.

Equity investment risk: Value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects as well as more general market factors. In the event of a company default (e.g. bankruptcy), the owners of their equity rank last in terms of any financial payment from that company.

Information Disclosure

The portfolio has adhered to its policy objective and there were no material changes to the composition of the portfolio during the quarter.

DISCLAIMER

Collective Investment Schemes in Securities (CIS) should be considered as medium to long-term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate. CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TERs. During the phase in period TERs do not include information gathered over a full year. Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction cost is a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

Where a current yield has been included for Funds that derive its income primarily from interest bearing income, the yield is a weighted average yield of all underlying interest bearing instruments as at the last day of the month. This yield is subject to change as market rates and underlying investments change.

The Manager retains full legal responsibility for any third-party-named portfolio. Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macroeconomic risks, political risks, foreign exchange risks, tax risks, settlement risks; and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient by or before 11:00 (SA) for money market funds and the Prescient Optimised Income Fund and by or before 13:00 for all other funds, to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut-off time, Prescient shall not be obliged to transact at the net asset value price as agreed to. Funds are priced at either 3pm or 5pm depending on the nature of the Fund. Prices are published daily and are available on the Prescient website.

Performance has been calculated using net NAV to NAV numbers, including actual initial and all ongoing fees, with income reinvested on the reinvestment date. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request.

This portfolio operates as a white label fund under the Prescient Unit Trust Scheme, which is governed by the Collective Investment Schemes Control Act.
