

MAZI GLOBAL EQUITY FUND

Minimum Disclosure Document & General Investor Report - Class A1

31 December 2023

FUND UNIVERSE

The fund may hold global equity securities, government, corporate and inflation-linked bonds, debentures, non-equity securities, convertible debt instruments, preference shares, money market instruments and assets in liquid form.

INVESTMENT OBJECTIVE

The Mazi Asset Management Prime Global Equity Fund is a global equity portfolio that seeks to provide long-term capital growth in excess of the benchmark.

INVESTMENT STRATEGY

The fund will seek to outperform the MSCI World All Country total return index over the medium-to-long term by owning a focused portfolio of high-quality, global, growth equities. The fund's equity exposure shall always exceed 80%. At any one time, at least 80% of the underlying portfolio will be comprised of global equity securities.

WHO SHOULD BE INVESTING

The Fund is suitable for investors who:

- Seek specialist Global equity exposure as part of their overall investment strategy;
- Believe long-term equity exposure adds value;
- Understand the nature of equity exposure in that there is a risk of market fluctuations.

QUARTERLY COMMENTARY

Portfolio Comment

Our unhurried investment process leads to low portfolio turnover, a vital ingredient in long-term benchmark outperformance. Our portfolio turnover figures for 2021, 2022 and 2023 were 0%, 11.6% and 9.3% respectively. Investors can continue to expect low portfolio turnover from us. Notwithstanding, when the time comes to act, we do so decisively. During the quarter, we disposed of two businesses and acquired two new companies.

Forewarned in the previous Investor Note is foretold. We sold our old-timers Reckitt and Schindler. These remarkable businesses date from the 1800s with incredible everyday products and service franchises. Over many decades, they have become management-proof, unbreakable by grandiose acquisitions, impervious to carelessness, and produce plenty of excess cash profits year-in and year-out with a wide margin of operational safety. Yet, reaching for a structurally higher-growth trajectory is a bridge too far. Excess profits are not easily deployed into profitable growth-accelerating activities in their existing lines of business, but rather get distributed as dividends. Our mission is to seriously grow investor wealth over time. To do so, we require from our portfolio companies robust, sustained profitable growth that will meaningfully grow underlying shareholder value over time. These businesses, despite much to admire, struggle to move the dial that matters.

For a song we bought Melexis, a world leader in integrated automotive electronics. This Belgium-based company is largely unknown to the investment community. It is an asset-lite, deeply profitable business with high returns on invested capital (exceeding 35%) and prodigious cash flows that stands at the forefront of the design of electronic components for vehicles. In a no-growth global car park, its existing automotive business is expected to grow by at least 10% per annum for the next decade as traditional internal combustion engine vehicles consume ever greater quantities of silicone components and as nowadays electric vehicles embrace a whole new, integrated silicone and software design architecture for unified drivetrain, power, light, entertainment, and communication management. In addition to leading automotive technologies, Melexis' technology has application in robotics, healthcare, and other mobility technologies. This nascent business segment is expected to grow by at least 15% per annum. The future beckons.

In our Investor Note 2023 Q2, we flagged the potential disposal of Adobe on account of the pending \$20 billion acquisition of Figma, a subscale, profitless, collaborative web-design business with less than \$1 billion in annual revenue. In our view, the Figma takeover was fundamentally at odds with our investment philosophy and the rational capital allocation that we expect from our investee companies. The acquisition was subject to regulatory approvals in the US, Europe and the UK. It is with great relief that we report that the deal has indeed been abandoned by Adobe due to insurmountable regulatory obstacles. With the luxury of hindsight, the Figma deal was neither necessary nor important. We suspect that Adobe's management is quietly pleased with this regulatory outcome. Since the announcement of the acquisition, the ongoing developments in Adobe's own, very profitable, growing lines of business have been quite exciting, deserving 100% of management's time. Common sense, we hope, has prevailed.

Concluding Comments

We are optimistic about the long-term return prospects for our fund. We continue to find a number of long-term opportunities to investigate and pursue. As things stand, our portfolio companies are well set-up to grow profitably for many years to come. In the shorter term, falling long-term US interest rates bode well for valuations, likely to produce a handy tailwind for equity returns. Please do get in touch should you wish to discuss our portfolio and global markets.

Thank you for your support and trust.

MAZI GLOBAL EQUITY FUND

Minimum Disclosure Document & General Investor Report - Class A1

31 December 2023

Glossary

Annualised Performance: Annualised performance shows longer term performance rescaled to a 1 year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request.

Highest & Lowest Performance: The highest and lowest performance for any 1 year over the period since inception have been shown.

NAV: The net asset value represents the assets of a Fund less its liabilities.

Current Yield: Annual income (interest or dividends) divided by the current price of the security.

Sharpe Ratio: The Sharpe ratio is used to indicate the excess return the portfolio delivers over the risk free rate per unit of risk adopted by the fund.

Sortino Ratio: A measure of the risk-adjusted return of a portfolio. It is a modification of the Sharpe ratio but only penalises the returns falling below a user specified target, or required rate of return, while the Sharpe ratio penalises both upside and downside volatility equally.

Standard Deviation: The deviation of the return stream relative to its own average.

Max Drawdown: The maximum peak to trough loss suffered by the Fund since inception.

Transaction Costs (TC%): The Transaction Costs (TC) is the percentage of the net asset value of the Financial Product incurred as costs relating to the buying and selling of the assets underlying the Financial Product.

Total Investment Charges TIC (%) = TER (%) + TC (%): The Total Investment Charges (TIC), the TER + the TC, is the percentage of the net asset value of the class of the Financial Product incurred as costs relating to the investment of the Financial Product. It should be noted that a TIC is the sum of two calculated ratios (TER+TC).

Specific Risk

Default Risk: The risk that the issuers of fixed income instruments may not be able to meet interest payments nor repay the money they have borrowed. The issuers credit quality is vital. The worse the credit quality, the greater the risk of default and therefore investment loss.

Developing Market (excluding SA) Risk: Some of the countries invested in may have less developed legal, political, economic and/or other systems. These markets carry a higher risk of financial loss than those in countries generally regarded as being more developed.

Foreign Investment Risk: Foreign securities investments may be subject to risks pertaining to overseas jurisdictions and markets, including (but not limited to) local liquidity, macroeconomic, political, tax, settlement risks and currency fluctuations.

Interest Rate Risk: The value of fixed income investments (e.g. bonds) tends to be inversely related to interest and inflation rates. Hence their value decreases when interest rates and/or inflation rises.

% Property Risk: Investments in real estate securities can carry the same risks as investing directly in real estate itself. Real estate prices move in response to a variety of factors, including local, regional and national economic and political conditions, interest rates and tax considerations.

Geographic / Sector Risk: For investments primarily concentrated in specific countries, geographical regions and/or industry sectors, their resulting value may decrease whilst portfolios more broadly invested might grow.

Liquidity Risk: If there are insufficient buyers or sellers of particular investments, the result may lead to delays in trading and being able to make settlements, and/or large fluctuations in value. This may lead to larger financial losses than expected.

Equity Investment Risk: Value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects as well as more general market factors. In the event of a company default (e.g. bankruptcy), the owners of their equity rank last in terms of any financial payment from that company.

Disclosure

The portfolio has adhered to its object and there were no material changes to the composition of the portfolio during the quarter.

Risk Profile

HIGH RISK: This portfolio has a higher exposure to equities than any other risk profiled portfolio and therefore tend to carry higher volatility due to high exposure to equity markets. Expected potential long-term returns are high, but the risk of potential capital losses is high as well, especially over shorter periods. Where the asset allocation contained in this MDD reflect offshore exposure, the portfolio is exposed to currency risks, therefore, it is suitable for long term investment horizons.

Disclaimer

Collective Investment Schemes in Securities (CIS) should be considered as medium to long term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate. CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's. During the phase in period TER's do not include information gathered over a full year. Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER. Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macroeconomic risks, political risks, foreign exchange risks, tax risks, settlement risks; and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient by or before 10h00 (Irish Time), to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut-off time Prescient shall not be obliged to transact at the net asset value price as agreed to. The Fund are priced at 17h00 (New York Time) depending on the nature of the Fund. Prices are published daily and are available on the Prescient website. Performance has been calculated using net NAV to NAV numbers with income reinvested. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. This document is for information purposes only and does not constitute or form part of any offer to issue or sell or any solicitation of any offer to subscribe for or purchase any particular investments. Opinions expressed in this document may be changed without notice at any time after publication. We therefore disclaim any liability for any loss, liability, damage (whether direct or consequential) or expense of any nature whatsoever which may be suffered as a result of or which may be attributable directly or indirectly to the use of or reliance upon the information. For any additional information such as fund prices, brochures and application forms please go to www.prescient.ie. Copies of the Prospectus and the annual and half yearly reports of the Company are available in English and may be obtained, free of charge, from Prescient Fund Services (Ireland) Limited (the "Manager") at 49 Upper Mount Street, Dublin 2, Ireland or by visiting www.prescient.ie. Copies may also be obtained directly from Mazi Asset Management (Pty) Ltd (the Investment Manager). Where a current yield has been included for Funds that derive its income primarily from interest bearing income, the yield is a weighted average yield of all underlying interest bearing instruments as at the last day of the month. This yield is subject to change as market rates and underlying investments change.

The Mazi Global Equity Fund is registered and approved under section 65 of the Collective Investment Schemes Control Act of 2002.
