

### Investment Objective

The investment objective of the Fund is to provide investors with capital appreciation and to generate income over the medium to long term through exposure to international real estate assets.

### Risk Indicator Definition

The investment objective of the Fund is to provide investors with capital appreciation and to generate income over the medium to long term through exposure to international real estate assets. In addition to the risk captured by the indicator, the overall Fund value may be considerably affected by: liquidity risk, market risk, operational risk, credit risk, interest rate risk and currency risk.

### RISK INDICATOR

### ANNUALISED PERFORMANCE (%)

### MARKET COMMENTARY

In June, the fund outperformed the benchmark by 41bps, as it was up 129bps while the benchmark increased by 88bps. The outperformance was driven by the first and second bites of the apple, namely region and sector, which together increased performance by 25bps, while our 7% cash balance resulted in positive performance of 17bps, given the USD weakness. The Asian regions continued to outperform the US, which worked well for us given our overweight positioning in the former geography. Our US sector positioning was less fortuitous, given we were underweight the top 3 performing sectors, namely office, triple net leases and hotels. During June, the property stocks underperformed the overall equity market, reversing their outperformance earlier in the year. However, we believe that the property sector is likely to remain stable, which should lead to relative outperformance over the coming 12 months.

The best-performing region this month was Hong Kong, with developers up 9% and REITs up 4%. We have a large overweight in this market on the back of attractive valuations and a stabilising economy with transaction volumes increasing. Singapore was second, with developers up 8% and REITs up 6%. We are currently neutral on this region but are doing the analysis to decide on whether to increase our weighting in this geography at this point. The EU was the third best performer, up 4%, where we are also overweight as interest rates fall and supply in most sectors remains muted. At the opposite end of the spectrum, the only region in the red for the month was the US, down 1%, which is by far our largest underweight given stretched valuations, average fundamentals and political uncertainty.

The best-performing US sector in June was office, up 4%, where we are underweight as vacancy rates are still high and valuations are less attractive than before. The second-best performer was net lease, up 2%, where we are marginally underweight, as the positivity of stability in uncertain times is offset by the lack of external growth opportunities. Lodging was the only other sector in the black, but we have no exposure there as we believe that economic growth is likely to fall going forward. The weakest performing sector was data centres, down 11%, as investors viewed Equinix's investor day negatively because of an increase in future investment, which led to a downgrade in the near-term earnings growth outlook. We remain neutral on the sector given strong demand matched by huge supply and an uncertain power supply dynamic. The second weakest sector was storage, down 4%, where we remain underweight given weak fundamentals. The third weakest sector was residential, down 2%, which is our second-largest underweight as affordability remains stretched.

The best-performing stock in our portfolio for the month was HK office stalwart Swire Properties, up 14%, and we decided to take profit at this juncture, given fair valuations after rallying over 50% in the last year. We have replaced it in the portfolio with New World Development, a HK developer with a somewhat stretched balance sheet, which is likely to be repaired in the current more favourable environment when they sell assets and reduce debt. The second-best performer for the month was London West End office stock Great Portland Estates, up 8%, where rent keeps rising and yields are likely to begin to compress. The third best was Keppel DC REIT, also up 8%, where we are looking for alternatives in Singapore. At the opposite end of the spectrum, the worst-performing stocks were all from the US, with Equinix leading the charge as mentioned above. Next, was apartment stock Camden Property Trust, down 4%, and industrial behemoth Prologis, down 3%.

We will stick to our guns geographically, believing that the city states of HK and Singapore are likely to continue to outperform given attractive valuations and fundamentals that are improving off a low base, while transaction volumes are increasing, creating greater transparency. From a US sector perspective, we favour the resilient shopping centre space above the rest.

*\*Commentary is based on USD returns, gross of investment charges, as at close of US markets (16h00 EST) on the last trading day of the month. This may differ from ZAR returns, which is shown net of investment charges, as at 15h00 CAT on the last trading day of the month.*

#### Glossary

**Annualised Performance:** Annualised performance shows longer term performance rescaled to a 1 year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request.

**Highest & Lowest Performance:** The highest and lowest performance for any 1 year over the period since inception have been shown.

**NAV:** The net asset value represents the assets of a Fund less its liabilities.

**Current Yield:** Annual income (interest or dividends) divided by the current price of the security.

**Alpha:** Denotes the outperformance of the fund over the benchmark.

**Sharpe Ratio:** The Sharpe ratio is used to indicate the excess return the portfolio delivers over the risk free rate per unit of risk adopted by the fund.

**Sortino Ratio:** A measure of the risk-adjusted return of a portfolio. It is a modification of the Sharpe ratio but only penalises the returns falling below a user specified target, or required rate of return, while the Sharpe ratio penalises both upside and downside volatility equally.

**Standard Deviation:** The deviation of the return stream relative to its own average.

**Max Drawdown:** The maximum peak to trough loss suffered by the Fund since inception.

**Max Gain:** Largest increase in any single month.

**% Positive Month:** The percentage of months since inception where the Fund has delivered positive return.

**Total Expense Ratio (TER%):** The Total Expense Ratio (TER) is the percentage of the net asset value of the class of the Financial Product incurred as expenses relating to the administration of the Financial Product.

**Performance fee incl. in TER (%) PF (%):** The Performance Fee is a payment made to the Fund Manager for generating outperformance and is generally calculated as percentage of outperformance, often both realized and unrealized.

**Transaction Costs (TC%):** The Transaction Costs (TC) is the percentage of the net asset value of the Financial Product incurred as costs relating to the buying and selling of the assets underlying the Financial Product.

**Total Investment Charges TIC (%) = TER (%) + TC (%):** The Total Investment Charges (TIC), the TER + the TC, is the percentage of the net asset value of the class of the Financial Product incurred as costs relating to the investment of the Financial Product. It should be noted that a TIC is the sum of two calculated ratios (TER+TC).

#### Specific Risk

**Default Risk:** The risk that the issuers of fixed income instruments may not be able to meet interest payments nor repay the money they have borrowed. The issuers credit quality is vital. The worse the credit quality, the greater the risk of default and therefore investment loss.

**Derivatives Risk:** The use of derivatives could increase overall risk by magnifying the effect of both gains and losses in a Fund. As such, large changes in value and potentially large financial losses could result.

**Developing Market (excluding SA) Risk:** Some of the countries invested in may have less developed legal, political, economic and/or other systems. These markets carry a higher risk of financial loss than those in countries generally regarded as being more developed.

**Foreign Investment Risk:** Foreign securities investments may be subject to risks pertaining to overseas jurisdictions and markets, including (but not limited to) local liquidity, macroeconomic, political, tax, settlement risks and currency fluctuations.

**Interest Rate Risk:** The value of fixed income investments (e.g. bonds) tends to be inversely related to interest and inflation rates. Hence their value decreases when interest rates and/or inflation rises.

**% Property Risk:** Investments in real estate securities can carry the same risks as investing directly in real estate itself. Real estate prices move in response to a variety of factors, including local, regional and national economic and political conditions, interest rates and tax considerations.

**Currency Exchange Risk:** Changes in the relative values of individual currencies may adversely affect the value of investments and any related income.

**Geographic / Sector Risk:** For investments primarily concentrated in specific countries, geographical regions and/or industry sectors, their resulting value may decrease whilst portfolios more broadly invested might grow.

**Derivative Counterparty Risk:** A counterparty to a derivative transaction may experience a breakdown in meeting its obligations thereby leading to financial loss.

**Liquidity Risk:** If there are insufficient buyers or sellers of particular investments, the result may lead to delays in trading and being able to make settlements, and/or large fluctuations in value. This may lead to larger financial losses than expected.

**Equity Investment Risk:** Value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects as well as more general market factors. In the event of a company default (e.g. bankruptcy), the owners of their equity rank last in terms of any financial payment from that company.

#### Disclosure

The portfolio has adhered to its object and there were no material changes to the composition of the portfolio during the quarter.

#### Disclaimer

Collective Investment Schemes in Securities (CIS) should be considered as medium to long term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate. CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's. During the phase in period TER's do not include information gathered over a full year. Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macroeconomic risks, political risks, foreign exchange risks, tax risks, settlement risks; and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient by or before 14:00 (SA), to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut off time Prescient shall not be obliged to transact at the net asset value price as agreed to. The Fund are priced at either 3pm or 5pm depending on the nature of the Fund. Prices are published daily and are available on the Prescient website.

Performance has been calculated using net NAV to NAV numbers with income reinvested. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request.
