PRESCIENT INCOME PROVIDER FEEDER ACTIVELY MANAGED ETF (A)

MINIMUM DISCLOSURE DOCUMENT & GENERAL INVESTOR REPORT

INVESTMENT AND RETURN OBJECTIVE

The Fund aims to return CPI + 3% per annum through a full interest rate cycle while providing stability by aiming never to lose capital over any rolling 3 month period.

INVESTMENT PROCESS

This Fund invests in local and offshore money market, bonds, property, preference shares, inflation-linked bonds and derivatives to meet the investment objectives. Fund performance can be generated from taking interest rate views or duration, yield enhancement via credit instruments, asset asset allocation between income producing asset classes, offshore exposure and also via the use of derivatives.

WHO SHOULD INVEST

Investors seeking stable real returns and aiming to maximise income via exposure to primarily the South African Money and Bond markets. This Fund is suitable to investors with a short- to medium-term investment horizon and is Regulation 28 compliant.

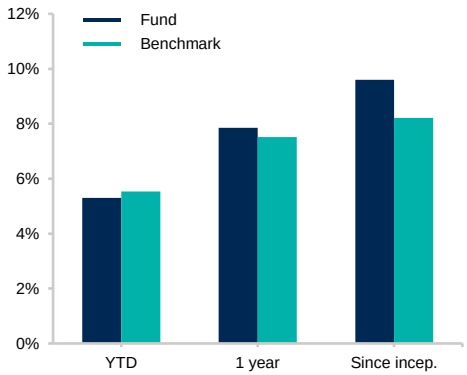

RISK INDICATOR DEFINITION

These portfolios typically have no or low equity exposure, resulting in higher interest yields and stable capital values with the probability of capital losses over the shorter term (3 months) highly unlikely. These portfolios typically target returns in the region of 1% – 3% above inflation before tax over the long term.

FUND COMMENTARY

Inflation picked up only slightly in August. The print released on 23 September came in at 4.4% against 4.3% in July, with the index itself unchanged on the month. Food inflation ticked up for the first time in nine months, to 1.1% from 0.9%, annual fuel inflation eased a little to 20.0% from 20.6%, and core sat at 4.1%. Most of the pressure that remains is coming from energy rather than from anything domestic. With the Strait of Hormuz still closed and Iran's offer to reopen it turned down in Washington, Brent worked its way up from around $90 at the end of August to roughly $107 by the 28th, and a petrol increase of more than R3 a litre has been flagged for October. The Reserve Bank expects that to carry headline above 5% for a while before it settles back towards 3% by the end of 2027, which reads more like a pass-through bulge working its way through the base than a change in the underlying trend.

That backdrop handed us a repricing we are quite happy to see. The MPC raised the repo rate by 25 basis points to 7.25%, unanimously, and the 10-year moved from around 8.75% ahead of the decision to roughly 8.9% after it. The rand softened 1.55% to 16.42 on firmer oil and softer precious metals, while offshore the Fed raised rates for the first time since 2023, by 25 basis points to 3.75-4.00%, with the ECB and the Bank of Japan both moving in the same direction. Growth at home remains subdued, with second-quarter GDP contracting 0.2% and the Bank trimming its 2026 forecast to 1.2%. For an income fund, though, the more relevant point is that nominal yields across the curve are now meaningfully higher than they were at the start of the year, and the money market is paying us well for patience.

The Fund closed September with a gross yield of 9.38% and a modified duration of 2.77 years. The ALBI itself finished more or less flat at 0.01%, but that number hides a wide spread across the curve, and the spread fell our way. The 1-3 year bucket returned 0.47% and 12+ years 0.20%, while 3-7 and 7-12 years gave back 0.07% and 0.21%. The barbell we run, with carry and fixed-rate paper at the front end, selective long-dated exposure at the back, and very little in the belly, is exactly where the index did its work this month. It is also not a one-month story: year to date the 1-3 year bucket has returned 4.71% and 12+ years 4.32%, against 2.81% and 3.25% in the middle of the curve. We are comfortable holding that shape from here. The front end is compounding at levels we have not seen for some time, and the long end gives us something worth owning for the point at which the energy pass-through fades and the market begins looking through to the easing cycle on the other side.

The Fund delivered a positive return in September that was behind its benchmark. The good yielding assets in the portfolio made the biggest contribution for the month as well as the portfolio hedge. The biggest detractor being the US treasury position in our hedged offshore position.

PRESCIENT INCOME PROVIDER FEEDER ACTIVELY MANAGED ETF (A)

GLOSSARY

Annualised performance: Annualised performance shows longer term performance rescaled to a 1 year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request.

Highest & Lowest performance: The highest and lowest performance for any 1 year over the period since inception have been shown.

NAV: The net asset value represents the assets of a Fund less its liabilities.

Current Yield: Annual income (interest or dividends) divided by the current price of the security.

CPU: Cents Per Unit to the Glossary

Alpha: Denotes the outperformance of the fund over the benchmark.

Sharpe Ratio: The Sharpe ratio is used to indicate the excess return the portfolio delivers over the risk free rate per unit of risk adopted by the fund.

Standard Deviation: The deviation of the return stream relative to its own average.

% Positive Month: The percentage of months since inception where the Fund has delivered positive return.

Average Duration: The weighted average duration of all the underlying interest bearing instruments in the Fund.

Forward Yield: The Forward Yield is the expected combined income of the instruments in the portfolio over the next year expressed as a percentage of the current value of those instruments.

Bid Price: The price a buyer is willing to pay for a security.

Offer Price (Ask Price): The price a seller is willing to accept for a security.

Bid/Offer Spread: The difference between the offer and bid prices, indicating market liquidity.

Fund Specific Risks

Default Risk: The risk that the issuers of fixed income instruments may not be able to meet interest payments nor repay the money they have borrowed. The issuers credit quality is vital. The worse the credit quality, the greater the risk of default and therefore investment loss.

Derivatives risk: The use of derivatives could increase overall risk by magnifying the effect of both gains and losses in a Fund. As such, large changes in value and potentially large financial losses could result.

Developing Market (excluding SA) risk: Some of the countries invested in may have less developed legal, political, economic and/or other systems. These markets carry a higher risk of financial loss than those in countries generally regarded as being more developed.

Interest rate risk: The value of fixed income investments (e.g. bonds) tends to be inversely related to interest and inflation rates. Hence their value decreases when interest rates and/or inflation rises.

% Property risk: Investments in real estate securities can carry the same risks as investing directly in real estate itself. Real estate prices move in response to a variety of factors, including local, regional and national economic and political conditions, interest rates and tax considerations.

Information Disclosure

The portfolio has adhered to its policy objective and there were no material changes to the composition of the portfolio during the quarter.

DISCLAIMER

Collective Investment Schemes in Securities (CIS) should be considered as medium to long-term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CISs are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate. CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's. During the phase in period TER's do not include information gathered over a full year. Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

A Feeder Fund is a portfolio that invests in a single portfolio of a collective investment scheme which levies its own charges, and which could result in a higher fee structure for the feeder fund.

Where a current yield has been included for Funds that derive its income primarily from interest bearing income, the yield is a weighted average yield of all underlying interest-bearing instruments as at the last day of the month. This yield is subject to change as market rates and underlying investments change.

Exchange traded funds are listed on an exchange and may incur additional costs.

The Manager retains full legal responsibility for any third party-named portfolio. Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macroeconomic risks, political risks, foreign exchange risks, tax risks, settlement risks, and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees.

Performance has been calculated using net NAV to NAV numbers with income reinvested. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request.

Exchange Traded Funds vs Unit Trusts: Whilst both unit trusts and ETFs are regulated and registered under the Collective Investment Schemes Control Act, ETFs trade on stock exchanges just like any other listed, tradable security. Unlike a unit trust, which can be bought or sold only at the end of the trading day, an ETF can be traded intraday, during exchange trading hours.

For any additional information such as fund prices, brochures and application forms please go to www.prescient.co.za.

This portfolio operates as a white label fund under the Prescient ETF Scheme, which is governed by the Collective Investment Schemes Control Act.
