Finsolnet Global Growth Prescient Fund of Funds

Minimum Disclosure Document & General Investor Report

As of 2026/09/30

Investment Objective

The portfolio will aim to deliver long-term growth to investors by achieving returns of inflation plus 5%.

Investment Policy

The Finsolnet Global Growth Prescient Fund of Funds will aim to deliver long-term growth to investors by achieving returns of inflation plus 5% over a 5-year rolling period. The portfolio will achieve its investment objective by investing in local collective investment schemes and foreign collective investments schemes that have bias towards international equities. The portfolio is required to maintain an equity exposure of at least 80% at all times.

Quarterly Fund Commentary

The Finsolnet Global Growth Prescient Fund of Funds launched on 31 July 2026, and we thank our first investors for their support. The fund gives investors broad exposure to global equities through five complementary managers. It combines low-cost index exposure through Satrix MSCI World with active managers who follow different investment styles: Ninety One Global Franchise, Ranmore Global Value, Laurium Global Active Equity and Old Mutual Global Equity.

The fund's first two months coincided with a demanding market. Rising bond yields, higher oil prices and a stronger US dollar weighed on global equities in September. On 16 September the US Federal Reserve raised its policy rate by a quarter point to 3.75%–4.00%, its first increase since July 2023, and most Fed officials expect at least one further increase before year-end. Market leadership was narrow: strength in AI-related technology shares offset weakness across most other sectors. Against this backdrop, the Satrix and Old Mutual allocations held up best. Ninety One, Ranmore and Laurium lagged a market led by a small group of technology companies. Whilst we would prefer all funds to rise, we see this mix of styles as a strength, because different managers are expected to lead at different stages of the market cycle.

At quarter-end the fund was almost fully invested in offshore equities. About 68% was in North America and 12% in developed Europe, and technology was the largest sector at 29%. Holdings range from technology leaders such as NVIDIA, Microsoft and ASML to steadier businesses such as Visa, Johnson & Johnson and Philip Morris.

Investors should expect periods of volatility. Further US interest rate increases, conflict in the Middle East and its effect on oil prices, and the US midterm elections on 3 November could all unsettle markets in the months ahead. Movements in the US Dollar/ South African Rand exchange rate will also affect returns.

The fund aims to deliver inflation plus 5% over rolling five-year periods, and we recommend a minimum investment horizon of seven years. Two months is a very short period measured against that goal, and we remain confident in the fund's positioning for the long term. The fund adhered to its policy objectives.

Glossary Summary

Annualised performance: Annualised performance shows longer term performance rescaled to a 1-year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request.

Highest & Lowest return: The highest and lowest returns for any 1 year over the period since inception have been shown.

NAV: The net asset value represents the assets of a Fund less its liabilities.

Standard Deviation: The deviation of the return stream relative to its own average.

Max Drawdown: The maximum peak to trough loss suffered by the Fund since inception.

Max Gain: Largest increase in any single month

Fund Specific Risks

Default risk: The risk that the issuers of fixed income instruments (e.g. bonds) may not be able to meet interest payments nor repay the money they have borrowed. The issuer's credit quality is vital. The worse the credit quality, the greater the risk of default and therefore investment loss.

Derivatives risk: The use of derivatives could increase overall risk by magnifying the effect of both gains and losses in a Fund. As such, large changes in value and potentially large financial losses could result.

Developing Market (excluding SA) risk: Some of the countries invested in may have less developed legal, political, economic and/or other systems. These markets carry a higher risk of financial loss than those in countries generally regarded as being more developed.

Foreign Investment risk: Foreign securities investments may be subject to risks pertaining to overseas jurisdictions and markets, including (but not limited to) local liquidity, macroeconomic, political, tax, settlement risks and currency fluctuations.

Interest rate risk: The value of fixed income investments (e.g. bonds) tends to be inversely related to interest and inflation rates. Hence, their value decreases when interest rates and/or inflation rise.

Property risk: Investments in real estate securities can carry the same risks as investing directly in real estate itself. Real estate prices move in response to a varied of factors, including local, regional and national economic and political conditions, interest rates and tax considerations.

Currency exchange risk: Changes in the relative values of individual currencies may adversely affect the value of investments and any related income.

Geographic / Sector risk: For investments primarily concentrated in specific countries, geographical regions and/or industry sectors, their resulting value may decrease whilst portfolios more broadly invested might grow.

Derivative counterparty risk: A counterparty to a derivative transaction may experience a breakdown in meeting its obligations, thereby leading to financial loss.

Liquidity risk: If there are insufficient buyers or sellers of particular investments, the result may lead to delays in trading and being able to make settlements, and/or large fluctuations in value may lead to larger financial losses than expected.

Equity investment risk: Value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects, as well as more general market factors. In the event of a company default (e.g. bankruptcy), the owners of their equity rank last in terms of any financial payment from that company.

Disclaimer

Collective Investment Schemes in Securities (CIS) should be considered as medium to long-term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate. CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's. During the phase in period TER's do not include information gathered over a full year. Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

A Fund of Funds is a portfolio that invests in portfolios of collective investment schemes, which levy their own charges, which could result in a higher fee structure for these portfolios.

The Manager retains full legal responsibility for any third-party-named portfolio. Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macroeconomic risks, political risks, foreign exchange risks, tax risks, settlement risks; and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient by or before 13:00 (SA), to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut off time Prescient shall not be obliged to transact at the net asset value price as agreed to. Funds are priced at either 3pm or 5pm depending on the nature of the Fund. Prices are published daily and are available on the Prescient website.

Performance has been calculated using net NAV to NAV numbers with income reinvested.
