

Cogence Global Cautious Prescient Feeder Fund

Minimum Disclosure Document & General Investor Report

30 September 2025

Fund details

Investment manager	Cogence (Pty) Ltd.
Launch date	22 August 2022
ASISA classification	(ASISA) - Global - Multi Asset - Low Equity
Benchmark ¹	(ASISA) - Global - Multi Asset - Low Equity Category Average
Risk profile	 Low
Fund size	R15,565,622
Income declaration	Bi Annually (End March and September)
Regulation 28 compliant	No
Currency	South African Rands
NAV price at month	120.23c
Inception NAV price	100c
Number of units	12,945,476
Annual fees (Incl. VAT)	0.89%
Performance fees	None
Total expense ratio (TER)	1.66%
Transaction costs (TC)	0.02%
Total investment charges (TIC)	1.68%
JSE code	COGCFA
ISIN number	ZAE000312336
Transaction cut-off time:	16:00

Notes

1. Benchmark and performance data is provided by Cogence (Pty) Ltd.

Illustrative cumulative performance for a R100 lump-sum investment since launch

The investment performance is for illustrative purposes only. The investment performance is calculated by taking the actual initial fees and all ongoing fees into account for the amount shown and income is reinvested on the reinvestment date.

Investment policy

The objective of this fund is to provide long-term total returns. The fund aims to preserve capital over the short-to-medium term, while also providing some exposure to long-term capital growth. It will invest in global assets using both active and passive strategies to ensure diversification across sectors, geographies and investment styles. The strategy is constructed with a low-to-medium allocation to equity, not exceeding 35%.

Who this investment may be suitable for

This strategy is suitable for investors with a low-risk profile who seek capital preservation and stable global real returns in US dollars. While returns are derived and denominated in USD, valuations are priced in ZAR, which may expose investors to currency risk. It is designed for those with a low tolerance for market volatility who require some equity exposure for growth, while still prioritising capital protection. A minimum investment term of three years is recommended.

The fund has adhered to its policy objectives as stated in the supplemental deed.

Historical performance* (net of fees)

Period	Fund	Benchmark
1 month	-0.99%	-1.08%
3 months	-0.43%	0.39%
YTD	-2.66%	1.72%
1 year	4.91%	10.32%
3 year	7.00%	9.27%
5 year	-	-
Since Launch (Ann.)	6.11%	8.63%
Since Launch (Cum.)	20.26%	29.35%

Performance data longer than 1 year is annualised.

Risk statistics (since launch)

Statistic	Fund	Benchmark
Volatility	9.93%	10.30%
Maximum drawdown	-7.62%	-8.14%
Highest one-year return	18.04%	19.14%
Lowest one-year return	0.27%	2.73%
Sharpe ratio (Rf = STeFI)	-0.15	0.10

* Performance is calculated using the Total Returns Index (TRI), net of fees, with all dividend and/or income declarations reinvested on the declaration date at the net asset value price at that time. Investment performance is for illustrative purposes only.

Portfolio composition

There have been no material changes to the composition of the fund over the last quarter.

Monthly market commentary

September marked the month when the US Federal Reserve (Fed) cut rates (25 basis points) for the first time this year, motivated by worries about the softening labour market. Historically, September has also been the weakest month of the year for equities, but 2025 has bucked that trend with most major global equity markets posting positive gains.

Developed market equities moved higher (MSCI World Index +3.2%), ending the month with a 17.4% gain year to date (YTD). Japan continued its bull run (Nikkei 225 +5.1%), followed closely by the US (S&P500 +3.6%) as AI tailwinds drove the large tech names higher. UK equities (FTSE 100 +1.5%) and European equities (FTSE Europe ex-UK +0.5%) also posted positive returns. Stand out performance came, however, from emerging markets equities (MSCI Emerging Markets +7.2%), driven largely by major gains in China (MSCI China +9.8%), where tech shares took centre stage. Brazil (BM&FBOVESPA Ibovespa IBOV - Brazil +5.4%) and South Africa (JSE All Share +9.3%) also drove markets higher, resulting in emerging markets outpacing developed peers YTD.

While the dollar trended lower, US bond yields fell and prices rose. The short end of the curve has already priced in some rate cuts by the Fed in the months ahead, while the longer end has lagged recently due to worries over central bank independence. Elsewhere, central banks in the eurozone, UK, and Japan all kept their policy rates unchanged. The South African Reserve Bank kept rates unchanged at its September meeting and the rand ended the month up +2.6% against the US dollar. Corporate credit spreads remained stable in September given resilient economic data and solid investor risk appetite.

Gold continued to surge, reaching new records (+12.0%) powered by the dip in the US dollar. Silver, palladium and platinum followed in the same vein, up 19.0%, 13.0%, and 17.0%, respectively. Oil was the outlier commodity, trading 6.0% lower on news that OPEC+ will likely approve another production hike.

Performance figures are quoted in USD.

General

Collective investment schemes (Unit Trusts) are generally medium to long-term investments. The value of participatory interests (units) or the investment may go down as well as up. Past performance is not necessarily a guide to future performance. Collective investment schemes are traded at ruling prices and can engage in borrowing and scrip lending (i.e. borrowing and lending of assets). The manager does not provide any guarantee, with respect to the capital or the return of a portfolio. Prescient retains full legal responsibility for the third-party-named portfolio. Any forecasts and/or commentary in this document are not guaranteed to occur. Different classes of participatory interests apply to these portfolios and are subject to different fees and charges. A schedule of all fees and charges, inclusive of VAT and maximum commissions, is available on request from us or from your financial adviser. Forward pricing is used.

Yields

The yield for bond and income portfolios is historic and is calculated quarterly.

Important information

The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. The ability of the portfolio to repurchase is dependent upon the liquidity of the securities and cash of the portfolio. A manager may suspend repurchases for a period, subject to regulatory approval, to await liquidity, and the manager must keep the investors informed about these circumstances.

A feeder fund is a portfolio that invests in a single portfolio of a collective investment scheme which levies its own charges, and which could result in a higher fee structure for the feeder fund.

Lump-sum performance returns are being quoted. Income distributions, prior to deduction of applicable taxes, are included in the performance calculations. NAV to NAV figures have been used for the performance calculations, as calculated by the manager at the valuation point defined in the deed, over all reporting periods. Investment performance calculations are available for verification upon request by any person. Reinvestment of income is calculated on the actual amount distributed per participatory interest, using the ex-dividend date NAV price of the applicable class of the portfolio, irrespective of the actual reinvestment date. The performance is calculated for the fee class. The individual investor performance may differ, as a result of initial fees, the actual investment date, the date of reinvestment and dividend withholding tax.

The rate of return is calculated on a total return basis, and the following elements may involve a reduction of the investor's capital: interest rates, economic outlook, inflation, deflation, economic and political shocks or changes in economic policy. Annualised returns are period returns re-scaled to a period of one year. This allows investors to compare returns of different assets that they have owned for different lengths of time. All period returns greater than one year have been annualised. Returns for periods less than one year have not been annualised. A cumulative return is the aggregate amount an investment has gained or lost over time, independent of the period of time involved. Actual annual figures are available to the investor on request. Illustrative investment performance is for illustrative purposes only.

Specific fund risks

- Derivatives
- Exposure to foreign securities
- Drawdown
- Liquidity
- Equities
- Bond

For a detailed description of these risks, and other risks that are relevant to the portfolio, please refer to the CIS and other Risk Disclosure Documents, available at www.cogence.co.za.

Glossary

Annualised return - An annualised return is the weighted average compound growth rate over the period measured.

Highest & Lowest return - The highest and lowest returns for any one year over the period since inception have been shown.

Volatility - Volatility (also called standard deviation) is a measure of how widely the returns varied over the period measured.

Maximum drawdown - A maximum drawdown is the maximum loss from a peak to trough of the portfolio over the period measured, before a new peak is attained.

Sharpe ratio - The Sharpe ratio is a measure of risk-adjusted returns. The Sharpe ratio reflects the extent to which an investment compensates for extra risk.

NAV - The net asset value represents the assets of a fund less its liabilities.

What is the total investment charge (TIC)

Total expense ratio (TER) is the percentage of the value of the portfolio that was incurred as expenses relating to the administration (charges, levies and fees) of the portfolio. TER is calculated over rolling 3 years (or since inception, where applicable), and is annualised, to the most recent calendar quarter-end. A higher TER does not necessarily imply a good return. The current TER may not necessarily be an accurate indication of future TER's. Transaction costs (TC) is the percentage of the value of the portfolio that was incurred as costs relating to the buying and selling of the assets underlying the portfolio. Transaction Costs are a necessary cost in administering the portfolio and impacts portfolio returns. It should not be considered in isolation, as returns may be impacted by many other factors over time, including market returns, the type of financial product, the investment decisions of the investment manager, and the TER. Calculations are based on actual data, where possible, and best estimates, where actual data is not available. Total investment charges (TIC) is the percentage of the value of the portfolio that was incurred as costs relating to the investment of the portfolio. It is the sum of the TER and TC.

For additional information on the portfolio, refer to the application forms, quarterly investment report and minimum disclosure documents, available on our website, www.cogence.co.za, from your financial adviser, or on request from the manager, free of charge.

The complaints policy and procedure, as well as the conflicts of interest management policy, are available on our website www.cogence.co.za. Associates of the manager may be invested within certain portfolios, and the details thereof are available from the manager. The manager has the right to close certain portfolios to new investors, in order to manage them more efficiently, in accordance with their mandates.

The Manager retains full legal responsibility for any third party-named portfolio. Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macroeconomic risks, political risks, foreign exchange risks, tax risks, settlement risks, and potential limitations on the availability of market information.

- Performance data reflected in the MDD was sourced from morningstar as at 9th October 2025.
- This document was published on 22 October 2025.

Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient by or before 13:00 (SA), to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut off time Prescient shall not be obliged to transact at the net asset value price as agreed to. Funds are priced at either 3pm or 5pm depending on the nature of the Fund. Prices are published daily and are available on the Prescient website.

This portfolio operates as a white label fund under the Prescient Unit Trust Scheme, which is governed by the Collective Investment Schemes Control Act.

Cogence (Pty) Ltd - Registration 2009/011658/07 - is an authorised financial services provider (FSP No 52242).
