

# PRESCIENT BALANCED FEEDER AMETF (A)

## MINIMUM DISCLOSURE DOCUMENT

### INVESTMENT AND RETURN OBJECTIVE

The Fund aims to deliver significant real returns over the long term and to outperform the ASISA category average of the South African - Multi-Asset - High Equity funds over a full market cycle by maintaining meaningful exposure to growth assets like equities.

### INVESTMENT PROCESS

The Fund invests in a diverse range of assets including equities and interest-bearing instruments, both domestically and offshore. The asset allocation is anchored at the long-term strategic allocation but can be varied tactically to target outperformance of the benchmark by capitalising on signals of significant market mispricing. Where possible, a process of enhanced indexation is utilised within asset classes to deliver stable incremental alpha.

### WHO SHOULD INVEST

Investors seeking significant real returns over the long term but who are cost conscious. The Fund is suitable for investors with a medium to long-term investment horizon and is Regulation 28 compliant.

### RISK INDICATOR DEFINITION

These portfolios typically exhibit more volatility and potential for capital losses due to higher exposure to equities and exposure to offshore markets where currency fluctuations may result in capital losses. These portfolios typically target returns in the region of 5% - 6% above inflation over the long term.

## FUND MONTHLY RETURNS

Not available - New Fund, data will be available 12 months after launch.

## FUND COMMENTARY

The Iran war that began with US and Israeli strikes on 28 February 2026 continued to dominate the global macro landscape through May, with energy markets the primary transmission channel into inflation, growth, and policy. Brent crude, which spiked above \$120 a barrel at war onset, traded in a wide range through May on intermittent de-escalation rumours but had returned to hover around \$100 a barrel by month-end with the Strait of Hormuz still largely closed. The underlying picture has deteriorated rather than improved: the International Energy Agency (IEA) reported on 13 May that the cumulative shortfall in Gulf oil deliveries since the conflict began had reached roughly one billion barrels. That gap has so far been absorbed by reduced demand, non-Gulf production increases, and a 250-million-barrel drawdown in global inventories.

European policy responses have begun to crystallise too: on 27 May Germany's state-owned Securing Energy for Europe (SEFE) signed an LNG agreement for up to 1 million tonnes per year from Canada's Ksi Lisims project - equivalent to roughly one-eighth of Germany's 2025 LNG imports - even as Berlin halved its 2026 GDP growth forecast to 0.5% on Iran-linked energy shocks. Alongside this, Germany's Economy Minister travelled to Beijing calling for a "trusting and open exchange", with explicit discussions on energy security, reliable access to critical minerals and supply channels firms can rely on - a signal that Berlin's response to the energy shock now runs through both diversification away from the Gulf and securing alternatives manufacturing-input channels with China.

For South Africa, the war's most visible footprint is on prices. Headline CPI accelerated from 3.1% in March to 4.0% in April - its highest reading since August 2024 and a full percentage point above the SARB's revised 3%-point target - driven almost entirely by energy. Core inflation, which strips out food, fuel, and energy, rose more modestly to 3.6%. The SARB, in its 29 May statement, raised its own oil price assumptions and revised its forecast path: headline inflation is now seen averaging 4.4% in 2026 and 3.7% in 2027, with a return to the 3%-point target deferred to 2028. Their response to rising prices and global uncertainty was sharper than the consensus had assumed: a 25-basis point hike to 7% on 29 May, the first increase since 2023, taken on a split vote. The committee framed the move as a "managing risk" decision rather than the start of an aggressive tightening cycle, with Governor Kganyago noting that earlier hopes for a quick end to the conflict had faded. The SARB's own Quarterly Projection Model implies one hike this quarter before rates begin easing later in the forecast horizon, however, Kganyago reiterated that decisions remain meeting-by-meeting.

Pulling these threads together, the Iran war has moved from a transient supply shock to a sustained input across global inflation, growth and policy. Its transmission is visible at every layer. Central banks are responding differently to the same shock: the SARB has hiked into a weak labour market, the IMF prefers the BoE to hold, and the BOJ is materially downgrading growth while raising its CPI forecast. The binding question for the months ahead is how long the Strait of Hormuz stays constrained - each additional month extends the inflation tail, narrows central-bank optionality, and shifts the conversation from energy prices toward embedded second-round effects.

Developed market equities were up +4.55% and Emerging Market Equities up +9.69%, while US treasuries were flat.

Locally the FTSE/JSE Allshare index lost -0.2%, while the All Bond Index Total Return gained 3.27% and the Inflation-Linked Index Total Return index was flat.

The fund was up strongly this month largely due to the continued recovery in developed and emerging market equities.

The Fund currently holds a positive view on South African equities, a negative view on developed market equities and emerging market equities. Our view on the rand remains has changed to strongly negative.

## GLOSSARY

**Annualised performance:** Annualised performance shows longer term performance rescaled to a 1 year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request.

**Highest & Lowest performance:** The highest and lowest performance for any 1 year over the period since inception have been shown.

**NAV:** The net asset value represents the assets of a Fund less its liabilities.

**Current Yield:** Annual income (interest or dividends) divided by the current price of the security.

**CPU:** Cents Per Unit to the Glossary

**Sharpe Ratio:** The Sharpe ratio is used to indicate the excess return the portfolio delivers over the risk free rate per unit of risk adopted by the fund.

**Max Drawdown:** The maximum peak to trough loss suffered by the Fund since inception.

**% Positive Month:** The percentage of months since inception where the Fund has delivered positive return.

**Bid Price:** The price a buyer is willing to pay for a security.

**Offer Price (Ask Price):** The price a seller is willing to accept for a security.

**Bid/Offer Spread:** The difference between the offer and bid prices, indicating market liquidity.

## Fund Specific Risks

**Default Risk:** The risk that the issuers of fixed income instruments may not be able to meet interest payments nor repay the money they have borrowed. The issuers credit quality is vital. The worse the credit quality, the greater the risk of default and therefore investment loss.

**Derivatives risk:** The use of derivatives could increase overall risk by magnifying the effect of both gains and losses in a Fund. As such, large changes in value and potentially large financial losses could result.

**Developing Market (excluding SA) risk:** Some of the countries invested in may have less developed legal, political, economic and/or other systems. These markets carry a higher risk of financial loss than those in countries generally regarded as being more developed.

**Foreign Investment risk:** Foreign securities investments may be subject to risks pertaining to overseas jurisdictions and markets, including (but not limited to) local liquidity, macroeconomic, political, tax, settlement risks and currency fluctuations.

**Interest rate risk:** The value of fixed income investments (e.g. bonds) tends to be inversely related to interest and inflation rates. Hence their value decreases when interest rates and/or inflation rises.

**% Property risk:** Investments in real estate securities can carry the same risks as investing directly in real estate itself. Real estate prices move in response to a variety of factors, including local, regional and national economic and political conditions, interest rates and tax considerations.

**Currency exchange risk:** Changes in the relative values of individual currencies may adversely affect the value of investments and any related income.

**Geographic / Sector risk:** For investments primarily concentrated in specific countries, geographical regions and/or industry sectors, their resulting value may decrease whilst portfolios more broadly invested might grow.

**Derivative counterparty risk:** A counterparty to a derivative transaction may experience a breakdown in meeting its obligations thereby leading to financial loss.

**Liquidity risk:** If there are insufficient buyers or sellers of particular investments, the result may lead to delays in trading and being able to make settlements, and/or large fluctuations in value. This may lead to larger financial losses than expected.

**Equity investment risk:** Value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects as well as more general market factors. In the event of a company default (e.g. bankruptcy), the owners of their equity rank last in terms of any financial payment from that company.

## Information Disclosure

The portfolio has adhered to its policy objective and there were no material changes to the composition of the portfolio during the quarter.

## DISCLAIMER

Collective Investment Schemes in Securities (CIS) should be considered as medium to long-term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CISs are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate. CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's. During the phase in period TER's do not include information gathered over a full year. Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

A Feeder Fund is a portfolio that invests in a single portfolio of a collective investment scheme which levies its own charges, and which could result in a higher fee structure for the feeder fund.

Where a current yield has been included for Funds that derive its income primarily from interest bearing income, the yield is a weighted average yield of all underlying interest-bearing instruments as at the last day of the month. This yield is subject to change as market rates and underlying investments change.

Exchange traded funds are listed on an exchange and may incur additional costs.

The Manager retains full legal responsibility for any third party-named portfolio. Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macroeconomic risks, political risks, foreign exchange risks, tax risks, settlement risks, and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees.

Performance has been calculated using net NAV to NAV numbers with income reinvested.

Exchange Traded Funds vs Unit Trusts: Whilst both unit trusts and ETFs are regulated and registered under the Collective Investment Schemes Control Act, ETFs trade on stock exchanges just like any other listed, tradable security. Unlike a unit trust, which can be bought or sold only at the end of the trading day, an ETF can be traded intraday, during exchange trading hours.

For any additional information such as fund prices, brochures and application forms please go to [www.prescient.co.za](http://www.prescient.co.za).

This portfolio operates as a white label fund under the Prescient ETF Scheme, which is governed by the Collective Investment Schemes Control Act.
