

PRESCIENT INCOME PROVIDER FEEDER ACTIVELY MANAGED ETF (A)

MINIMUM DISCLOSURE DOCUMENT

INVESTMENT AND RETURN OBJECTIVE

The Fund aims to return CPI + 3% per annum through a full interest rate cycle while providing stability by aiming never to lose capital over any rolling 3 month period.

INVESTMENT PROCESS

This Fund invests in local and offshore money market, bonds, property, preference shares, inflation-linked bonds and derivatives to meet the investment objectives. Fund performance can be generated from taking interest rate views or duration, yield enhancement via credit instruments, asset allocation between income producing asset classes, offshore exposure and also via the use of derivatives.

WHO SHOULD INVEST

Investors seeking stable real returns and aiming to maximise income via exposure to primarily the South African Money and Bond markets. This Fund is suitable to investors with a short- to medium-term investment horizon and is Regulation 28 compliant.

RISK INDICATOR DEFINITION

These portfolios typically have no or low equity exposure, resulting in higher interest yields and stable capital values with the probability of capital losses over the shorter term (3 months) highly unlikely. These portfolios typically target returns in the region of 1% – 3% above inflation before tax over the long term.

RISK INDICATOR

FUND COMMENTARY

South African fixed-income markets staged a strong rally in May, with government bond yields falling across the curve even as domestic inflation surprised to the upside and the Reserve Bank tightened policy. Benchmark government bond yields declined by approximately 30 to 40 basis points over the month in what a principal-component decomposition shows was overwhelmingly a parallel move — roughly 35 basis points of level decline applied fairly uniformly along the curve, with only a marginal bull-steepening bias and negligible curvature contribution. This translated into robust positive total returns across the entire curve, ranging from approximately 1.7% at the short end to around 3.7% at the ultra-long end, with returns broadly rising in line with duration. In short, this was a broad-based re-rating of South African duration rather than a change in the shape of the curve.

The rally was notable for occurring against a more challenging domestic inflation backdrop. Headline CPI for April, released during the month, accelerated to 4.0% from 3.1% previously, driven largely by an approximately 11% rise in fuel prices as the earlier oil shock fed through to the pump. In response, the South African Reserve Bank raised the repo rate by 25 basis points to 7.00% at its 28 May meeting — its first hike since 2023 — on a divided four-to-two vote, lifting prime to 10.50%. Governor Kganyago struck a firmly hawkish tone, raising the Bank's oil-price assumptions, flagging renewed food-price and El Niño drought risks, and signalling that further tightening could follow if global conditions deteriorate. The Bank's updated forecasts see headline inflation averaging 4.4% in 2026 and 3.7% in 2027 before returning to the 3% target in 2028.

Rather than selling off on the hike, the market appears to have interpreted the SARB's pre-emptive action as reinforcing its inflation-fighting credibility, supporting longer-dated bonds and helping to anchor inflation expectations. This was reinforced by a markedly more supportive global backdrop: Brent crude fell sharply over the month on hopes of a Middle East de-escalation, US Treasury yields drifted lower, and developed-market credit spreads held close to cycle tights. A firmer rand — supported by the higher policy rate, softer oil and a weaker US dollar — and renewed foreign interest in high-real-yield South African assets rounded out a constructive month for local duration.

Against this backdrop, the Fund benefitted from its income and duration exposure as yields rallied, while retaining a disciplined posture given the SARB's explicit warning of further hikes and the persistence of geopolitical and domestic risks. Positioning continues to balance attractive carry through shorter-dated and floating-rate instruments with selective interest-rate duration, and the Fund retains the flexibility to adjust exposure should the policy outlook or the global backdrop shift.

The Fund's forward yield remains attractive at 9.38%. The Fund has an interest rate duration of 2.05 years and a total duration (including ILBs) of 2.15 years. The current risk profile aligns with the Fund's risk objective, and we believe the Fund is well positioned to achieve its return objectives.

The Fund delivered a positive return in May. The fixed-rate bond holdings were the standout contributor as South African government bond yields rallied roughly 35 basis points in a broad-based, level-driven move, with the longest-dated instruments benefitting most. The Money Market and credit-linked note exposures provided a solid and stable income base, while the floating-rate, offshore, inflation-linked, preference share and property holdings each added modestly. The sole detractor was the USD/ZAR currency hedge, which cost the Fund as the rand strengthened over the month.

PRESCIENT INCOME PROVIDER FEEDER ACTIVELY MANAGED ETF (A)

GLOSSARY

Annualised performance: Annualised performance shows longer term performance rescaled to a 1 year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request.

Highest & Lowest performance: The highest and lowest performance for any 1 year over the period since inception have been shown.

NAV: The net asset value represents the assets of a Fund less its liabilities.

Current Yield: Annual income (interest or dividends) divided by the current price of the security.

CPU: Cents Per Unit to the Glossary

Alpha: Denotes the outperformance of the fund over the benchmark.

Sharpe Ratio: The Sharpe ratio is used to indicate the excess return the portfolio delivers over the risk free rate per unit of risk adopted by the fund.

Standard Deviation: The deviation of the return stream relative to its own average.

% Positive Month: The percentage of months since inception where the Fund has delivered positive return.

Average Duration: The weighted average duration of all the underlying interest bearing instruments in the Fund.

Forward Yield: The Forward Yield is the expected combined income of the instruments in the portfolio over the next year expressed as a percentage of the current value of those instruments.

Bid Price: The price a buyer is willing to pay for a security.

Offer Price (Ask Price): The price a seller is willing to accept for a security.

Bid/Offer Spread: The difference between the offer and bid prices, indicating market liquidity.

Fund Specific Risks

Default Risk: The risk that the issuers of fixed income instruments may not be able to meet interest payments nor repay the money they have borrowed. The issuers credit quality is vital. The worse the credit quality, the greater the risk of default and therefore investment loss.

Derivatives risk: The use of derivatives could increase overall risk by magnifying the effect of both gains and losses in a Fund. As such, large changes in value and potentially large financial losses could result.

Developing Market (excluding SA) risk: Some of the countries invested in may have less developed legal, political, economic and/or other systems. These markets carry a higher risk of financial loss than those in countries generally regarded as being more developed.

Interest rate risk: The value of fixed income investments (e.g. bonds) tends to be inversely related to interest and inflation rates. Hence their value decreases when interest rates and/or inflation rises.

% Property risk: Investments in real estate securities can carry the same risks as investing directly in real estate itself. Real estate prices move in response to a variety of factors, including local, regional and national economic and political conditions, interest rates and tax considerations.

Information Disclosure

The portfolio has adhered to its policy objective and there were no material changes to the composition of the portfolio during the quarter.

DISCLAIMER

Collective Investment Schemes in Securities (CIS) should be considered as medium to long-term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CISs are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate. CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's. During the phase in period TER's do not include information gathered over a full year. Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

A Feeder Fund is a portfolio that invests in a single portfolio of a collective investment scheme which levies its own charges, and which could result in a higher fee structure for the feeder fund.

Where a current yield has been included for Funds that derive its income primarily from interest bearing income, the yield is a weighted average yield of all underlying interest-bearing instruments as at the last day of the month. This yield is subject to change as market rates and underlying investments change.

Exchange traded funds are listed on an exchange and may incur additional costs.

The Manager retains full legal responsibility for any third party-named portfolio. Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macroeconomic risks, political risks, foreign exchange risks, tax risks, settlement risks, and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees.

Performance has been calculated using net NAV to NAV numbers with income reinvested. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request.

Exchange Traded Funds vs Unit Trusts: Whilst both unit trusts and ETFs are regulated and registered under the Collective Investment Schemes Control Act, ETFs trade on stock exchanges just like any other listed, tradable security. Unlike a unit trust, which can be bought or sold only at the end of the trading day, an ETF can be traded intraday, during exchange trading hours.

For any additional information such as fund prices, brochures and application forms please go to www.prescient.co.za.

This portfolio operates as a white label fund under the Prescient ETF Scheme, which is governed by the Collective Investment Schemes Control Act.
