# UMTHOMBO WEALTH INSTITUTIONAL ACTIVE BOND PRESCIENT FUND

#### **ABOUT THE FUND**

The Fund is actively managed on a discretionary basis to provide stable long-term growth with moderate level of risk. The Fund shall be within 2 years of the modified duration of the BEASSA Total Return Index.

#### **INVESTMENT STRATEGY**

The Fund aims to deliver a return in excess of the benchmark over the long term, which comprises a reasonable level of income, as well as capital performance relative to the benchmark. The portfolio will invest in interest bearing and non-equity securities (including, but not limited to, government or quasigovernment bonds, corporate bonds, cash deposits, money market and other interest-bearing securities), as well as listed and unlisted financial instruments in line with appropriate regulations. The investments are actively managed and will change over time to reflect a macro fundamental outlook including the interest rate cycle, business cycle, default cycle, as well as other cyclical and credit factors.

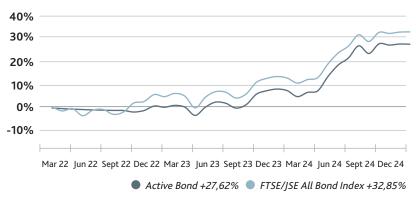

The portfolio has adhered to its investment objective and there were no material changes to the composition of the portfolio during the reporting period.

## GENERAL FUND INFORMATION

# FUND COMMENTARY

The South Africa sovereign yield curve continued with a steepening bias in January. The ALBI, managed to return 0,44% in the month despite weakness in the indicators and volatile environment on choppy market sentiment.

In line with expectations the SARB reduced the repo rate by another 25bp, however it was wrapped in a cautious rhetoric. The SARB's inflation forecast was kept unchanged at 4,6% and 4,5% for the next two years. However, risks to the inflation outlook to remain to the upside, especially global factors. For the local economic outlook, the SARB expect a rebound in the fourth quarter and see Q4 GDP at 1.3% q/q and 2025 GDP at 1.8%, revised up from 1.7%. Overall, a limited reaction to the rate decision in bonds and USDZAR given that the rate cut was widely expected. The SARB support will aid the currency.

Bond prognosis still relatively benign in the medium term. SA government bonds have aptly benefitted from the improved domestic political and policy backdrop but are now under pressure from weak global bonds. Should U.S. yields ultimately decline as widely expected, this will provide more upside potential for local bonds.

### GLOSSARY

- Annualised performance: Annualised performance shows longer term performance rescaled to a 1-year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request.
- Highest & Lowest return: The highest and lowest returns for any 1 year over the period since inception have been shown.
- NAV: The net asset value represents the assets of a Fund less its liabilities.
- Sharpe Ratio: The Sharpe ratio is used to indicate the excess return the portfolio delivers over the risk free rate per unit of risk adopted by the fund.
- Standard Deviation: The deviation of the return stream relative to its own average.
- Max Drawdown: The maximum peak to trough loss suffered by the Fund since inception.
- Max Gain: Largest increase in any single month
- % Positive Month: The percentage of months since inception where the Fund has delivered positive return.
- · Average Duration: The weighted average duration of all the underlying interest bearing instruments in the Fund.
- · Average Credit quality: The weighted average credit quality of all the underlying interest bearing instruments in the Fund (internally calculated).

### FUND SPECIFIC RISKS

- Default risk: The risk that the issuers of fixed income instruments (e.g. bonds) may not be able to meet interest payments nor repay the money they have borrowed. The issuers credit quality it vital. The worse the credit quality, the greater the risk of default and therefore investment loss.
- Derivatives risk: The use of derivatives could increase overall risk by magnifying the effect of both gains and losses in a Fund. As such, large changes in value and potentially large financial losses could result.
- Interest rate risk: The value of fixed income investments (e.g. bonds) tends to be inversely related to interest and inflation rates. Hence their value decreases when interest rates and/or inflation rises.
- Property risk: Investments in real estate securities can carry the same risks as investing directly in real estate itself. Real estate prices move in response to a variety of factors, including local, regional and national economic and political conditions, interest rates and tax considerations.
- Derivative counterparty risk: A counterparty to a derivative transaction may experience a breakdown in meeting its obligations thereby leading to financial loss.
- Liquidity risk: If there are insufficient buyers or sellers of particular investments, the result may lead to delays in trading and being able to make settlements, and/or large fluctuations in value. This may lead to larger financial losses than expected.

#### DISCLAIMER

Collective Investment Schemes in Securities (CIS) should be considered as medium to long-term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate.

CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's. During the phase in period TER's do not include information gathered over a full year. Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

Where a current yield has been included for Funds that derive its income primarily from interest bearing income, the yield is a weighted average yield of all underlying interest-bearing instruments as at the last day of the month. This yield is subject to change as market rates and underlying investments change.

The Manager retains full legal responsibility for any third-party-named portfolio. Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macroeconomic risks, political risks, foreign exchange risks, tax risks, settlement risks, and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. Please note that all documents, notifications of deposit, investment, redemption, and switch applications must be received by Prescient by or before 13:00 (SA), to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut off time Prescient shall not be obliged to transact at the net asset value price as agreed to. Funds are priced at either 3pm or 5pm depending on the nature of the Fund. Prices are published daily and are available on the Prescient website.

Performance has been calculated using net NAV to NAV numbers with income reinvested. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request.
