FAIRTREE

Fairtree Global Equity Fund

Minimum Disclosure Document & General Investor Report - Class A1

30 September 2026

Investment Objective

The Fund aims to provide investors with long-term capital growth through investment in global equity markets.

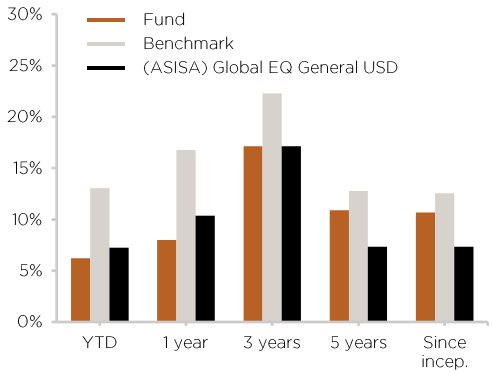

Investment Policy

The Fund seeks to achieve its objective primarily through investment in equity securities in developed markets across all industry sectors. It may also invest from time to time in equity-related securities and collective investment schemes. The Fund may invest directly or indirectly through collective investment schemes. It may also use financial derivative instruments, including for the purpose of hedging exchange rate risk.

MARKET COMMENTARY

The fund returned -2.03% for the month, underperforming the benchmark by 0.92%. Global equity markets retreated in September as rising bond yields, a stronger dollar and a renewed surge in the oil price weighed on sentiment, with the MSCI ACWI Index declining 1.1%. Leadership narrowed sharply around artificial intelligence, as the technology-heavy Nasdaq 100 rose 3.3% while the S&P 500 slipped 0.4%. A handful of AI beneficiaries drove the advance: AMD briefly reached a $1 trillion market capitalisation on rising demand for its data centre processors and accelerators, while Meta had its strongest month in more than a decade following the launch of its Muse personal AI agent (all figures in USD).

The Federal Reserve raised its target range by 25 basis points to 3.75% to 4% in September, its first increase since July 2023, in a unanimous decision. August headline inflation held at 3.4% year on year, with gasoline accounting for over a third of the monthly increase, while payrolls rebounded by 162000, well ahead of expectations, with unemployment steady at 4.1%. The US 10-year Treasury yield rose more than 50 basis points over the month to 5.29%, its highest level since 2007. Brent crude rose 14.4% to above $100 a barrel as negotiations between the US and Iran stalled and shipping through the Strait of Hormuz remained well below pre-war levels. Gold reversed part of its August gain, declining 6.3% as higher Treasury yields and a stronger dollar reduced its appeal, with the Dollar Index up 2%, while platinum and palladium fell 4.5% and 11.5% respectively. The Bank of Japan also raised its policy rate to 1.25%, the highest in 31 years, leaving the major central banks broadly aligned in leaning against an energy-driven inflation shock.

European equity markets were the weakest region, with the MSCI Europe Index declining 4.6%. France was the weakest market, falling 6.3%, as a renewed budget battle pushed the spread between French and German 10-year yields to its widest level since 2012. Germany declined 6.1% as inflation accelerated to 3.3%, its highest since late 2023, and higher energy costs weighed on industrial and consumer names. The Netherlands was the strongest developed market, gaining 2.8%, supported by ASML on continued AI-driven demand for advanced lithography equipment. The European Central Bank raised its deposit rate by 25 basis points to 2.50% on 10 September, citing inflation pressures from the conflict in the Middle East, and now projects headline inflation of 3.0% for 2026.

On a sector level, Information Technology was the best-performing sector over the month, but with the fund's broadly neutral weight, weaker stock selection detracted from relative performance. Communication Services was the largest contributor to relative performance, where both the fund's overweight position and stock selection added value. Financials was the largest drag on the benchmark and the largest relative detractor, while the overweight to Consumer Discretionary also detracted.

Portfolio activity in September centred on semiconductor capital equipment and energy infrastructure, while taking profits after strong runs. The fund initiated new positions in Applied Materials, adding exposure to wafer fabrication equipment as chipmakers expand capacity for AI, and Siemens Energy, which benefits from rising investment in power generation and grid infrastructure. The fund also topped up Booking Holdings following share price weakness, alongside Amazon. These purchases were funded by trimming Meta following its strong rally, and Microsoft, while fully exiting Thermo Fisher, S&P Global and Bid Corp.

Notable contributors to fund performance were positions in Meta Platforms (+90bps absolute and +57bps relative), AMD (+21bps absolute and -2bps relative) and Sasol (+19bps absolute and relative). Notable detractors from performance over the month came from Adyen (-26bps absolute and relative), Prosus (-24bps absolute and relative) and Booking Holdings (-24bps absolute and -21bps relative).

The fund is positioned with an underweight in cyclical names, in favour of technology exposure. From a geographical perspective, the fund remains underweight North America, while being overweight South Africa, Kazakhstan, Netherlands and China.

Minimum Disclosure Document & General Investor Report - Class A1

30 September 2026

Glossary

Annualised Performance: Annualised performance shows longer term performance rescaled to a 1 year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request.
Highest & Lowest Performance: The highest and lowest performance for any 1 year over the period since inception have been shown.
NAV: The net asset value represents the assets of a Fund less its liabilities.
Current Yield: Annual income (interest or dividends) divided by the current price of the security.
Sharpe Ratio: The Sharpe ratio is used to indicate the excess return the portfolio delivers over the risk free rate per unit of risk adopted by the fund.
Sortino Ratio: A measure of the risk-adjusted return of a portfolio. It is a modification of the Sharpe ratio but only penalises the returns falling below a user specified target, or required rate of return, while the Sharpe ratio penalises both upside and downside volatility equally.
Standard Deviation: The deviation of the return stream relative to its own average.
Max Drawdown: The maximum peak to trough loss suffered by the Fund since inception.
Max Gain: Largest increase in any single month.
% Positive Month: The percentage of months since inception where the Fund has delivered positive return.
Performance Fee Cap: The maximum performance fee that can be charged over a specified period

Specific Risk

Default Risk: The risk that the issuers of fixed income instruments may not be able to meet interest payments nor repay the money they have borrowed. The issuers credit quality is vital. The worse the credit quality, the greater the risk of default and therefore investment loss.
Derivatives Risk: The use of derivatives could increase overall risk by magnifying the effect of both gains and losses in a Fund. As such, large changes in value and potentially large financial losses could result.
Developing Market (excluding SA) Risk: Some of the countries invested in may have less developed legal, political, economic and/or other systems. These markets carry a higher risk of financial loss than those in countries generally regarded as being more developed.
Foreign Investment Risk: Foreign securities investments may be subject to risks pertaining to overseas jurisdictions and markets, including (but not limited to) local liquidity, macroeconomic, political, tax, settlement risks and currency fluctuations.
Interest Rate Risk: The value of fixed income investments (e.g. bonds) tends to be inversely related to interest and inflation rates. Hence their value decreases when interest rates and/or inflation rises.
% Property Risk: Investments in real estate securities can carry the same risks as investing directly in real estate itself. Real estate prices move in response to a variety of factors, including local, regional and national economic and political conditions, interest rates and tax considerations.
Currency Exchange Risk: Changes in the relative values of individual currencies may adversely affect the value of investments and any related income.
Geographic / Sector Risk: For investments primarily concentrated in specific countries, geographical regions and/or industry sectors, their resulting value may decrease whilst portfolios more broadly invested might grow.
Derivative Counterparty Risk: A counterparty to a derivative transaction may experience a breakdown in meeting its obligations thereby leading to financial loss.
Liquidity Risk: If there are insufficient buyers or sellers of particular investments, the result may lead to delays in trading and being able to make settlements, and/or large fluctuations in value. This may lead to larger financial losses than expected.
Equity Investment Risk: Value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects as well as more general market factors. In the event of a company default (e.g. bankruptcy), the owners of their equity rank last in terms of any financial payment from that company.

Disclosure

The portfolio has adhered to its object and there were no material changes to the composition of the portfolio during the quarter.

Risk Indicator Definition

In addition to the risk captured by the indicator, the overall Fund value may be considerably affected by: market risk, liquidity risk, investment risk, currency risk, derivatives risk, counterparty risk, common stocks risk and concentration risk.

Disclaimer

Collective Investment Schemes in Securities (CIS) should be considered as medium to long term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate. CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's. During the phase in period TER's do not include information gathered over a full year. Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macroeconomic risks, political risks, foreign exchange risks, tax risks, settlement risks; and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient by or before 14:00 (SA), to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut off time Prescient shall not be obliged to transact at the net asset value price as agreed to. The Fund are priced at either 3pm or 5pm depending on the nature of the Fund. Prices are published daily and are available on the Prescient website.

Performance has been calculated using net NAV to NAV numbers with income reinvested. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request.

Where a current yield has been included for Funds that derive its income primarily from interest bearing income, the yield is a weighted average yield of all underlying interest bearing instruments as at the last day of the month. This yield is subject to change as market rates and underlying investments change.

Regulation 28 is issued under the Pension Fund Act.
