

# PRESCIENT SPECIALIST GLOBAL BOND FUND (A2)

## MINIMUM DISCLOSURE DOCUMENT

### INVESTMENT AND RETURN OBJECTIVE

The Fund aims to outperform the Bloomberg US Treasury Total Return Index and to provide investors with diversified exposure to global bond markets.

### INVESTMENT PROCESS

This Fund invests in global government and corporate bonds of varying maturities to achieve diversification. Fund performance can be generated from asset allocation and interest rate views. The portfolio may also hold participatory interests in collective investment schemes or similar assets, as well as liquid assets. The Fund will not trade derivatives, equity or any instruments disallowed by Regulation 30.

### WHO SHOULD INVEST

Investors and South African medical aids seeking access to global bonds through a local unit trust. The Fund is compliant with Reg. 30 of the Medical Schemes Act.

### RISK INDICATOR DEFINITION

The Fund will have high exposure to offshore bonds and longer duration fixed interest securities, which may result in capital volatility over the medium term. The portfolio will be managed in such a manner to match or outperform the Bloomberg US Treasury Total Return Index after fees. The fund will allocate the majority of its capital towards offshore fixed interest securities and will therefore have 100% offshore currency risk.

## RISK INDICATOR

ANNUALISED PERFORMANCE (%)	CUMULATIVE PERFORMANCE
Not available - New Fund, data will be available 12 months after launch.	Not available - New Fund, data will be available 12 months after launch.
ANNUALISED PERFORMANCE (%)	RISK AND FUND STATS

## GLOSSARY

**Annualised performance:** Annualised performance shows longer term performance rescaled to a 1 year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request.

**Highest & Lowest performance:** The highest and lowest performance for any 1 year over the period since inception have been shown.

**NAV:** The net asset value represents the assets of a Fund less its liabilities.

**Current Yield:** Annual income (interest or dividends) divided by the current price of the security.

**CPU:** Cents Per Unit to the Glossary

**Alpha:** Denotes the outperformance of the fund over the benchmark.

**Sharpe Ratio:** The Sharpe ratio is used to indicate the excess return the portfolio delivers over the risk free rate per unit of risk adopted by the fund.

**Standard Deviation:** The deviation of the return stream relative to its own average.

**Max Drawdown:** The maximum peak to trough loss suffered by the Fund since inception.

**Average Duration:** The weighted average duration of all the underlying interest bearing instruments in the Fund.

**Forward Yield:** The Forward Yield is the expected combined income of the instruments in the portfolio over the next year expressed as a percentage of the current value of those instruments.

## Fund Specific Risks

**Default Risk:** The risk that the issuers of fixed income instruments may not be able to meet interest payments nor repay the money they have borrowed. The issuers credit quality is vital. The worse the credit quality, the greater the risk of default and therefore investment loss.

**Derivatives risk:** The use of derivatives could increase overall risk by magnifying the effect of both gains and losses in a Fund. As such, large changes in value and potentially large financial losses could result.

**Interest rate risk:** The value of fixed income investments (e.g. bonds) tends to be inversely related to interest and inflation rates. Hence their value decreases when interest rates and/or inflation rises.

**Derivative counterparty risk:** A counterparty to a derivative transaction may experience a breakdown in meeting its obligations thereby leading to financial loss.

**Liquidity risk:** If there are insufficient buyers or sellers of particular investments, the result may lead to delays in trading and being able to make settlements, and/or large fluctuations in value. This may lead to larger financial losses than expected.

## DISCLAIMER

Collective Investment Schemes in Securities (CIS) should be considered as medium to long-term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate. CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TERs. During the phase in period TERs do not include information gathered over a full year. Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction cost is a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

Where a current yield has been included for Funds that derive its income primarily from interest bearing income, the yield is a weighted average yield of all underlying interest-bearing instruments as at the last day of the month. This yield is subject to change as market rates and underlying investments change.

The Manager retains full legal responsibility for any third party-named portfolio. Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macroeconomic risks, political risks, foreign exchange risks, tax risks, settlement risks, and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient by or before 11:00 (SA) for money market funds and the Prescient Optimised Income Fund and by or before 13:00 for all other funds to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut-off time, Prescient shall not be obliged to transact at the net asset value price as agreed to. Funds are priced at either 3pm or 5pm depending on the nature of the Fund. Prices are published daily and are available on the Prescient website.

Performance has been calculated using net NAV to NAV numbers with income reinvested.

This portfolio operates as a white label fund under the Prescient Unit Trust Scheme, which is governed by the Collective Investment Schemes Control Act.
