FAIRTREE

Fairtree Equity Prescient Fund

Minimum Disclosure Document & General Investor Report - Class A1

30 September 2026

Investment Objective

The Fairtree Equity Prescient Fund is an actively managed general equity fund with a focus on maximizing total returns in excess of the benchmark, after fees, over the long term.

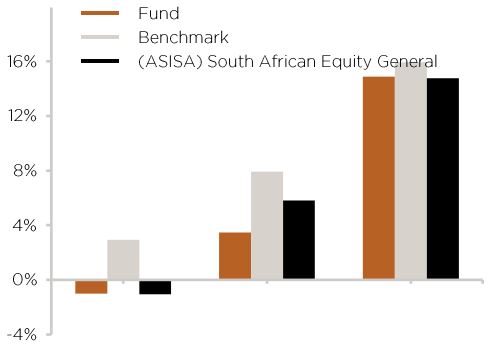

Investment Policy

The portfolio will aim to deliver long term capital growth by investing in both local and global equity markets. In order to achieve this objective, the portfolio will invest in selected shares across all industry sectors ranging across large, mid and smaller cap shares. The portfolio will seek to capture value by focusing on equity selection opportunities as well as quantitative screening process, based on various factors. The portfolio may include local, global developed and global emerging market equities. The portfolio will be exposed to exchange rate risk.

MARKET COMMENTARY

The fund returned -3.82% for the month, underperforming its benchmark by 0.35%. The benchmark, comprising 60% of the FTSE JSE Capped All Share Index and 40% of the MSCI ACWI Index, returned -3.46%, with the JSE Capped All Share Index decreasing 5.8% over the month, while the MSCI ACWI Index decreased by 0.18% (all in ZAR).

The fund's performance over the month was shaped by two main themes, namely weakness in its precious metals holdings on the local side, as gold fell 6.3%, platinum 4.5% and palladium 11.5% in dollar terms, and declines in Naspers and Prosus, which came under pressure from their exposure to Tencent.

Global equity markets retreated in September, where Developed Markets fell 1.2% and Emerging Markets 0.6%, as rising bond yields, a stronger dollar and a renewed surge in the oil price weighed on sentiment. Leadership narrowed sharply around artificial intelligence, as the technology-heavy Nasdaq 100 rose 3.3% while the S&P 500 slipped 0.4% (all figures in USD).

The Federal Reserve raised its target range by 25 basis points to 3.75% to 4% in September, its first increase since July 2023, in a unanimous decision. August headline inflation held at 3.4% year on year, with gasoline accounting for over a third of the monthly increase, while payrolls rebounded by 162000, well ahead of expectations, with unemployment steady at 4.1%. The US 10-year Treasury yield rose more than 50 basis points over the month to 5.29%, its highest level since 2007. Brent crude rose 14.4% to above $100 a barrel as negotiations between the US and Iran stalled and shipping through the Strait of Hormuz remained well below pre-war levels. Gold reversed part of its August gain, declining 6.3% as higher Treasury yields and a stronger dollar reduced its appeal, with the Dollar Index up 2%, while platinum and palladium fell 4.5% and 11.5% respectively. The Bank of Japan also raised its policy rate to 1.25%, the highest in 31 years, leaving the major central banks broadly aligned in leaning against an energy-driven inflation shock.

Emerging markets held up better than developed markets in September, despite a stronger dollar, a sharp rise in US Treasury yields and a renewed surge in the oil price. Leadership remained narrow, with Taiwan, Brazil and South Korea the only major emerging markets to advance. Taiwan gained 4.1%, as the Taiex reached record highs late in the month, led by TSMC alongside the wider AI supply chain, while MediaTek rallied after Nvidia committed $3.5 billion to its convertible bond offering. Brazil rose 3.1%, led by its banks, as foreign investors returned with their largest monthly inflows since March ahead of the first round of the presidential election on 4 October. South Korea rose 1.1%, as gains in Samsung and SK Hynix offset heavy foreign selling, with foreign investors taking profits after a strong first half amid rising global interest rates. South Africa fell 8.9%, as precious metals miners sold off sharply on lower gold and platinum prices, higher oil prices weighed on the country's trade position, and Naspers came under pressure from its exposure to Tencent. The South African Reserve Bank raised its repo rate by 25 basis points to 7.25% in a unanimous decision, citing an intensifying fuel price shock, with August inflation edging up to 4.4% from 4.3%, above the 3% target.

Notable portfolio actions during September were weighted towards JSE listed counters, with the fund initiating new positions in Richemont and British American Tobacco, the two largest purchases of the month, alongside OUTsurance and Quilter, while adding to existing positions in Naspers and Capitec. Globally, the fund initiated positions in Netflix and Infineon and topped up Alphabet and Booking Holdings. These purchases were funded by fully exiting Fortinet, Thermo Fisher and Automatic Data Processing, and trimming Microsoft. Notable contributors to fund performance were holdings in Meta Platforms (+68 basis points), Sasol (+62 basis points) and Taiwan Semiconductor Manufacturing (+26 basis points). Notable detractors from performance over the month came from Goldfields (-71 basis points), AngloGold Ashanti (-52 basis points) and Prosus (-35 basis points).

The fund's style and country positioning remain largely unchanged. The fund's current asset allocation to the JSE is around 57% with the remainder invested in global shares.

Fairtree Equity Prescient Fund

Minimum Disclosure Document & General Investor Report - Class A1

30 September 2026

Glossary

Annualised Performance: Annualised performance shows longer term performance rescaled to a 1 year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request.
Highest & Lowest Performance: The highest and lowest performance for any 1 year over the period since inception have been shown.
NAV: The net asset value represents the assets of a Fund less its liabilities.
Current Yield: Annual income (interest or dividends) divided by the current price of the security.
Alpha: Denotes the outperformance of the fund over the benchmark.
Sharpe Ratio: The Sharpe ratio is used to indicate the excess return the portfolio delivers over the risk free rate per unit of risk adopted by the fund.
Sortino Ratio: A measure of the risk-adjusted return of a portfolio. It is a modification of the Sharpe ratio but only penalises the returns falling below a user specified target, or required rate of return, while the Sharpe ratio penalises both upside and downside volatility equally.
Standard Deviation: The deviation of the return stream relative to its own average.
Max Drawdown: The maximum peak to trough loss suffered by the Fund since inception.
Max Gain: Largest increase in any single month.
% Positive Month: The percentage of months since inception where the Fund has delivered positive return.
High Water Mark: The highest level of performance achieved over a specified period.
Performance Fee Cap: The maximum performance fee that can be charged over a specified period
Total Expense Ratio (TER%): The Total Expense Ratio (TER) is the percentage of the net asset value of the class of the Financial Product incurred as expenses relating to the administration of the Financial Product.
Performance fee incl. in TER (%) PF (%): The Performance Fee is a payment made to the Fund Manager for generating outperformance and is generally calculated as percentage of outperformance, often both realized and unrealized.
Transaction Costs (TC%): The Transaction Costs (TC) is the percentage of the net asset value of the Financial Product incurred as costs relating to the buying and selling of the assets underlying the Financial Product.
Total Investment Charges TIC (%) = TER (%) + TC (%): The Total Investment Charges (TIC), the TER + the TC, is the percentage of the net asset value of the class of the Financial Product incurred as costs relating to the investment of the Financial Product. It should be noted that a TIC is the sum of two calculated ratios (TER+TC).

Specific Risk

Default Risk: The risk that the issuers of fixed income instruments may not be able to meet interest payments nor repay the money they have borrowed. The issuers credit quality is vital. The worse the credit quality, the greater the risk of default and therefore investment loss.
Derivatives Risk: The use of derivatives could increase overall risk by magnifying the effect of both gains and losses in a Fund. As such, large changes in value and potentially large financial losses could result.
Developing Market (excluding SA) Risk: Some of the countries invested in may have less developed legal, political, economic and/or other systems. These markets carry a higher risk of financial loss than those in countries generally regarded as being more developed.
Foreign Investment Risk: Foreign securities investments may be subject to risks pertaining to overseas jurisdictions and markets, including (but not limited to) local liquidity, macroeconomic, political, tax, settlement risks and currency fluctuations.
Interest Rate Risk: The value of fixed income investments (e.g. bonds) tends to be inversely related to interest and inflation rates. Hence their value decreases when interest rates and/or inflation rises.
% Property Risk: Investments in real estate securities can carry the same risks as investing directly in real estate itself. Real estate prices move in response to a variety of factors, including local, regional and national economic and political conditions, interest rates and tax considerations.
Currency Exchange Risk: Changes in the relative values of individual currencies may adversely affect the value of investments and any related income.
Geographic / Sector Risk: For investments primarily concentrated in specific countries, geographical regions and/or industry sectors, their resulting value may decrease whilst portfolios more broadly invested might grow.
Derivative Counterparty Risk: A counterparty to a derivative transaction may experience a breakdown in meeting its obligations thereby leading to financial loss.
Liquidity Risk: If there are insufficient buyers or sellers of particular investments, the result may lead to delays in trading and being able to make settlements, and/or large fluctuations in value. This may lead to larger financial losses than expected.
Equity Investment Risk: Value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects as well as more general market factors. In the event of a company default (e.g. bankruptcy), the owners of their equity rank last in terms of any financial payment from that company.

Disclosure

The portfolio has adhered to its object and there were no material changes to the composition of the portfolio during the quarter.

Risk Indicator Definition

The Portfolio is more diversified than the benchmark, thus holding smaller positions in the largest capitalisation stocks than the benchmark. This comes with the risk of more volatile relative returns to the broader market when the largest stocks in the benchmark outperform. We believe however that this strategy of holding a more diversified portfolio results in lower single stock risk, and whilst there may be periods of underperformance when the large cap stocks rally, we firmly believe in efficient risk management on an absolute basis. The strategy is also exposed to various factors driving investment performance, for example Value and Momentum, and these factors may also experience periods of relative underperformance. Global research has shown however, that consistent long term exposure to these factors lead to investment reward. This portfolio is permitted to invest in foreign securities which may have additional risks (FX Movements for example). However, the portfolio does not currently hold any foreign securities and the manager does not intend on exposing the portfolio to any foreign securities going forward.

Disclaimer

Collective Investment Schemes in Securities (CIS) should be considered as medium to long term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate.

CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's. During the phase in period TER's do not include information gathered over a full year. Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

The Manager retains full legal responsibility for any third party named portfolio. Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macro economic risks, political risks, foreign exchange risks, tax risks, settlement risks; and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient by or before 13:00 (SA), to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut off time Prescient shall not be obliged to transact at the net asset value price as agreed to. Funds are priced at either 3pm or 5pm depending on the nature of the Fund. Prices are published daily and are available on the Prescient website.

This portfolio operates as a white label fund under the Prescient Unit Trust Scheme, which is governed by the Collective Investment Schemes Control Act.

Performance has been calculated using net NAV to NAV numbers with income reinvested. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request.
